NEW QUESTION # 95

Which configuration enables BGP FlowSpec client function and installation of policies on all local interfaces?

- A.

```
flowspec
address-family ipv4
local-install interface-all
```
- B.

```
flowspec
address-family ipv4
local-install all-interface
```
- C.

```
flowspec
address-family ipv4
install interface-all
```
- D.

```
flowspec
address-family ipv4
install interface-all local
```

Answer: A

Explanation:

The correct configuration for enabling BGP FlowSpec client function and installation of policies on all local interfaces is `flowspec address-family ipv4 install interface-all local`. This command configures the router to accept FlowSpec policies from a BGP peer and apply them to all local interfaces. The `flowspec` keyword enables the BGP FlowSpec client function, `address-family ipv4` specifies the address family, and `install interface-all local` ensures that the policies are installed on all local interfaces.
