

Dumps Mule-101 Questions & Braindumps Mule-101 Pdf

P.S. Free & New Mule-101 dumps are available on Google Drive shared by ExamCost: <https://drive.google.com/open?id=1M0yZ5zxWLVr-TOWfExGqWZQrPXoKoicd>

You don't need to worry about network problems either. You only need to use Mule-101 exam questions for the first time in a network environment, after which you can be free from network restrictions. I know that many people like to write their own notes. The PDF version of Mule-101 training guide is for you. The PDF version of our Mule-101 study materials can be printed and you can carry it with you. If you have any of your own ideas, you can write it above. This can help you learn better.

As you know, opportunities are reserved for those who are prepared. Everyone wants to stand out in such a competitive environment, but they don't know how to act. Maybe our Salesforce Certified MuleSoft Integration Foundations exam questions can help you. Having a certificate may be something you have always dreamed of, because it can prove that you have a certain capacity. Our learning materials can provide you with meticulous help and help you get your certificate. Our Mule-101 training prep is credible and their quality can stand the test. Therefore, our practice materials can help you get a great financial return in the future and you will have a good quality of life.

High Pass Rate Salesforce Certified MuleSoft Integration Foundations Test Torrent is Convenient to Download - ExamCost

The price of the Mule-101 test dumps is quite reasonable, no matter you are the students or the employees of the enterprise, you can afford it. Mule-101 test dumps are verified by the specialists of the business, therefore the quality is ensured. Pass guarantee and money back guarantee for purchasing the Mule-101 Test Dumps. Other questions or problem of the product can consult the live chat service staff or by email, we will reply you immediately.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q31-Q36):

NEW QUESTION # 31

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

- A. Anypoint Monitoring
- B. Audit Logging

- C. Mule Stack Traces
- D. Anypoint Studio

Answer: B

Explanation:

Audit Logging: This feature in Anypoint Platform provides a searchable history of actions performed within the platform. It is designed specifically for governance and security compliance.

What it tracks: It records "who did what and when." This includes changes to:

User permissions and roles (Access Management).

Environment configurations.

API Manager policies.

Why others are incorrect:

Anypoint Monitoring: Focuses on application performance (CPU, Memory, API analytics), not administrative actions.

Stack Traces: Are used for debugging runtime application errors, not auditing user permissions.

NEW QUESTION # 32

What is a defining characteristic of an Integration-Platform-as-a-Service (IPaaS)?

- **A. Cloud-based**
- B. On-premises
- C. Code-first
- D. No-code

Answer: A

Explanation:

Definition of iPaaS: Gartner and MuleSoft define iPaaS (Integration Platform as a Service) as a suite of cloud services enabling the development, execution, and governance of integration flows connecting any combination of on-premises and cloud-based processes, services, applications, and data within individual or across multiple organizations.

The Key Characteristic: The "as a Service" suffix explicitly denotes a Cloud-based delivery model.

MuleSoft Context: CloudHub is the iPaaS component of the Anypoint Platform. It is a fully managed, multi-tenant, cloud-based integration platform where you deploy API implementations without managing the underlying hardware.

NEW QUESTION # 33

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

- **A. Developing a specification so consumers can test before the implementation is built**
- B. Publishing the fully implemented API to Exchange so all developers can reuse the API
- C. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

Answer: A

Explanation:

Design-First Approach: This methodology prioritizes creating the API contract (RAML/OAS) before writing any code.

The Benefit: By defining the specification first and publishing it to Exchange (often with a Mocking Service), API consumers (frontend developers or other teams) can test and provide feedback on the design immediately. This ensures the API meets business needs before the expensive work of backend implementation begins, preventing the failure described in the scenario.

Why others are incorrect:

Publishing fully implemented API (C): This is a "Code-First" approach (build first, share later).

Global Policies (B): Relates to governance, not the design methodology.

NEW QUESTION # 34

According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- A. Centrally managing return on investment (ROI) reporting from lines of business to leadership
- B. Enabling Edge security between the lines of business and public devices
- C. Centralizing project management across the lines of business
- **D. Accelerating self-service by the lines of business**

Answer: D

Explanation:

Center for Enablement (C4E): Unlike a Center of Excellence (CoE) which centralizes work, a C4E focuses on enablement.

Self-Service: The primary goal is to harvest reusable assets and best practices so that the Lines of Business (LOB) can build their own projects using these assets. This accelerates self-service and removes Central IT as the bottleneck.

Why others are incorrect:

Centralizing Project Management (D): C4E promotes decentralized delivery (federation), not centralized management.

NEW QUESTION # 35

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load.

- A. Down
- B. Vertical
- **C. Horizontal**
- D. Diagonal

Answer: C

Explanation:

Horizontal Scaling (Scale Out): This involves adding more instances (replicas/nodes) of a resource to handle increased load. In a Kubernetes or Runtime Fabric context, when the controller adds another "pod replica," it is strictly defined as horizontal scaling.

Vertical Scaling (Scale Up): This would involve increasing the size (CPU or RAM capacity) of an existing single instance/pod, rather than adding more copies of it.

Context: MuleSoft's Runtime Fabric (RTF) runs on Kubernetes and leverages this horizontal auto-scaling capability to maintain performance under high traffic.

NEW QUESTION # 36

.....

Our Mule-101 exam materials are compiled by experts and approved by the professionals who are experienced. They are revised and updated according to the pass exam papers and the popular trend in the industry. The language of our Mule-101 exam torrent is simple to be understood and our Mule-101 test questions are suitable for any learners. The content of our Mule-101 Study Materials is easy to be mastered and has simplified the important information. Our Mule-101 test questions convey the latest and valid questions and answers and thus make the learning relaxing and efficient.
