

2026 Useful Test H12-891_V1.0 Dumps Free | 100% Free Interactive H12-891_V1.0 Testing Engine

BONUS!!! Download part of Test4Engine H12-891_V1.0 dumps for free: <https://drive.google.com/open?id=1av9YN6K4gYglrEWPvY1wIwvsDMVgbsIX>

With the rapid development of the world economy and frequent contacts between different countries, looking for a good job has become more and more difficult for all the people. So it is very necessary for you to get the H12-891_V1.0 certification, you have to increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. Our H12-891_V1.0 Exam Questions can help you make it. As the most professional H12-891_V1.0 study guide, we have helped numerous of our customer get a better career and live a better life now.

Huawei H12-891_V1.0 Exam Overview:

Certification Vendor:	Huawei
Exam Name:	HCIE-Datacom V1.0
Exam Number:	H12-891_V1.0
Exam Price:	300 USD
Available Languages:	CHS, ENU
Related Certifications:	Huawei Certified ICT Expert (HCIE) HCIE-Datacom
Exam Duration:	90 minutes
Exam Format:	Single-answer Question, True or false, Drag and drop item, Short Response Item, Multiple-answer Question
Passing Score:	600/1000
Sample Questions:	Huawei H12-891_V1.0 Sample Questions
Exam Way:	Pearson VUE or Prometric
Pre Condition:	It is recommended to pass HCIP-Datacom-Core Technology. 5 years of relevant work experience is suggested.
Official Syllabus URL:	https://e.huawei.com/en/talent/cert/#/cert/technical-cert-details?certId=1223102600645939200&contentId=1223107831750217728

Interactive Huawei H12-891_V1.0 Testing Engine - H12-891_V1.0 New Dumps Pdf

The earlier you get H12-891_V1.0 exam certification, the more helpful for you to have better development in IT industry. Maybe you have heard that the important H12-891_V1.0 exam will take more time or training fee, because you haven't use our H12-891_V1.0 exam software provided by our Test4Engine. The complex collection and analysis of H12-891_V1.0 Exam Materials have been finished by our professional team for you. You just need to effectively review and pass H12-891_V1.0 exam successfully.

Huawei H12-891_V1.0 (HCIE-Datcom V1.0) Exam is a certification exam designed for those who want to become experts in data communication networks. H12-891_V1.0 exam tests the knowledge and skills of candidates in designing and deploying advanced data communication networks using Huawei technologies. The HCIE-Datcom V1.0 certification validates the comprehensive and practical knowledge of candidates in the technologies and principles of data communication networks.

Huawei HCIE-Datcom V1.0 Sample Questions (Q172-Q177):

NEW QUESTION # 172

The following description of the GVRP interface registration mode in Huawei switches is correct?

- A. When the interface layer two operating mode must be hybrid
- **B. When fixed registration mode is selected, the interface cannot propagate dynamic VLANs**
- C. GVRP when the register mode with forbidden is selected, there are four types of interface registration mode
- D. When the normal registration mode is selected, allow the interface to dynamically register and unregister the VLAN. Logout here includes deleting dynamically learned VLANs and VLANs created natively by the administrator

Answer: B

NEW QUESTION # 173

SR-MPLS uses the MPLS forwarding plane, and therefore requires MPLS to be enabled. Which of the following conditions must be met for MPLS to be automatically enabled on an interface? (Select all that apply)

- **A. Segment routing is enabled in the system view.**
- B. The SRGB is configured for the IGP process.
- C. The static adjacency label of the corresponding interface is configured in the segment routing view.
- **D. Segment routing is enabled for IGP, and IGP is enabled on the interface.**

Answer: A,D

Explanation:

To automatically enable MPLS on an interface in SR-MPLS:

Segment routing must be enabled globally in the system view → ☐

Segment routing must also be enabled under the IGP process, and IGP (OSPF or IS-IS) must be enabled on the interface → ☐

Clarifications:

SRGB (Segment Routing Global Block) configuration defines SID ranges but does not trigger MPLS enablement → ☐ Static

adjacency labels are advanced options and do not auto-enable MPLS → ☐ Correct answers: B, D

NEW QUESTION # 174

A carrier's home broadband service requires a maximum downstream bandwidth of 100 Mbit/s during off-peak hours and a guaranteed downstream bandwidth of 50 Mbit/s during peak hours. The home broadband service includes the home IP phone service and the home Internet access service. Which of the following configurations best meets the service requirement?

- **A. qos car inbound cir 50000 pir 100000**
- B. qos gts cir 100000
- C. qos car inbound cir 100000
- D. qos car inbound cir 100000 pir 50000

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The correct configuration is qos car inbound cir 50000 pir 100000.

CIR (Committed Information Rate):The guaranteed minimum bandwidth, set to 50 Mbit/s (50000 kbps).

PIR (Peak Information Rate): The maximum allowable bandwidth, set to 100 Mbit/s (100000 kbps).

This configuration ensures that during peak hours, the minimum guaranteed bandwidth is 50 Mbit/s, while during off-peak hours, the bandwidth can increase to a maximum of 100 Mbit/s. The settings align with the carrier's requirements for dynamic bandwidth allocation based on network load.

NEW QUESTION # 175

SR-MPLS is enabled on all routers. The label information encapsulated by R1 into a data packet is shown in the figure.

Which of the following is the forwarding path of the data packet?

- A. R1-R3-R2-R4-R6
- B. R1-R2-R3-R5-R6
- C. R1-R2-R4-R6

Answer: C

Explanation:

Comprehensive and Detailed In-Depth

1. Understanding SR-MPLS (Segment Routing with MPLS):

Segment Routing (SR) leverages MPLS labels to define paths through the network.

The labels represent segments (nodes or specific paths) rather than traditional LDP or RSVP-TE labels.

The label stack determines the forwarding path through the network.

Top Label: Determines the next hop.

Next Label: After label pop, it indicates the subsequent hop.

2. Analyzing the Given Label Stack:

The label stack encapsulated by R1 is as follows:

Layer2: 2046

2013

2032

2024

2046

Layer3

The top label (2046) indicates that the next-hop router is R4.

After R4 pops the top label, the next label (2046) directs the packet to R6.

3. Forwarding Path Analysis:

Step 1: R1 sends the packet to R2 based on internal routing.

Step 2: R2 forwards the packet directly to R4 as dictated by the top label (2046).

Step 3: R4 pops the top label (2046) and checks the next label (again 2046), directing the packet to R6.
