New Study C-CPI-2506 Questions | C-CPI-2506 Exam Dumps Free

Practicing for an SAP Certified Associate - Integration Developer (C-CPI-2506) exam is one of the best ways to ensure success. It helps students become familiar with the format of the actual C-CPI-2506 practice test. It also helps to identify areas where more focus and attention are needed. Furthermore, it can help reduce the anxiety and stress associated with taking an SAP Certified Associate - Integration Developer (C-CPI-2506) exam as it allows students to gain confidence in their knowledge and skills.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	<ul style="list-style-type: none">SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

Topic 3	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

SAP Certified Associate - Integration Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Attachment
- B. Exchange property
- **C. Message header**
- D. Message body

Answer: C

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

NEW QUESTION # 61

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- A. XSLT
- **B. XML**
- C. JSON

Answer: B

Explanation:

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel.

NEW QUESTION # 62

You want to split a message that contains recurring child nodes. Which of the following splitter types can you use? Note: There are 2 correct answers to this questions.

- **A. Iterating Splitter**
- **B. General Splitter**
- C. PKCS#7/CMS Splitter
- D. EDI Splitter

Answer: A,B

Explanation:

To split a message that contains recurring child nodes, you can use a General Splitter or an Iterating Splitter. A General Splitter allows you to split a message based on an XPath expression that defines the splitting criteria. An Iterating Splitter allows you to split a message based on an XPath expression that defines the repeating element. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 63

What does an API consumer do?

- A. It provides an interface.
- B. It provides the server-side implementation of an interface.
- C. It invokes an interface.

Answer: C

Explanation:

An API consumer is an application or system that invokes an interface provided by an API provider. An API consumer uses the interface to access or manipulate data or functionality exposed by the API provider. An API consumer can be a web browser, a mobile app, a cloud service, or any other client that can send requests and receive responses from an API provider. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 64

What are some advantages of creating an OData interface through an API provider? Note: There are 2 correct answers to this question.

- A. Automatic creation of a RAML specification
- B. Automatic creation of a WSDL specification
- C. Automatic creation of an openAPI specification
- D. Automatic creation of a Swagger UI

Answer: C,D

Explanation:

When an OData service is created through an API Provider in SAP API Management:
The system can automatically generate an OpenAPI specification from the OData service.
A Swagger UI is automatically created to enable interactive testing and documentation.

Other options:

WSDL specification # Used for SOAP-based services, not OData.

RAML specification # Supported, but not auto-generated by SAP API Management for OData services.

Hence, the correct advantages are:

Swagger UI generation

NEW QUESTION # 65

.....
