

Ideal Salesforce Integration-Architect Exam Dumps [Updated 2026] For Quick Success

P.S. Free & New Integration-Architect dumps are available on Google Drive shared by ExamcollectionPass:
<https://drive.google.com/open?id=1dT7yJsvExd1D88ckujKpwwFqtugE1p2O>

The accuracy rate of ExamcollectionPass Integration-Architect exam certification training materials is high with wide coverage. It not only can improve your cultural knowledge, but also improve your operation level. It not only makes you become IT elite, but also make you have a well-paid job that others admire. Before buying our Integration-Architect Certification Training materials, you can download Integration-Architect free demo and answers on probation on ExamcollectionPass website.

In some companies, the certificate of the exam is directly linked with the wages and the position in your company. Our Integration-Architect exam cram will offer you the short way to get the certificate. With the most eminent professionals in the field to compile and examine the Integration-Architect Test Dumps, they have a high quality. Purchasing the Integration-Architect exam cram of us guarantees the pass rate, and if you can't pass, money back is guaranteed.

Salesforce Integration-Architect Reliable Exam Camp - Integration-Architect Pass Guarantee

Many companies think highly of Salesforce certifications, and they will spend money on employees' exam fee and preparation materials. They request executive staff to purchase valid Integration-Architect exam questions vce for engineers so that they clear exams and get certifications easily without too much time and energy. Many companies regard us as their good long-term cooperative partner and think highly of our Integration-Architect Exam Questions Vce.

Salesforce Certified Integration Architect Sample Questions (Q18-Q23):

NEW QUESTION # 18

A call center manager uses a custom dashboard to track Case related metrics. The manager wants a component to display the number of closed Cases in real time.

What type of event should be used to meet this requirement?

- A. Generic Event
- B. Push Topic Event
- C. Change Data Capture Event
- D. Platform Event

Answer: C

Explanation:

Explanation

Change Data Capture Event is the best option to meet this requirement. Change Data Capture Event is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations¹. By subscribing to Change Data Capture Event for the Case object, the dashboard component can receive real-time updates on the number of closed Cases. Push Topic Event is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query². However, Push Topic Event has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations³. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources⁴. Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires

custom logic to publish and subscribe. Generic Event is a type of streaming event that sends custom JSON notifications to subscribers without a predefined schema⁵. Generic Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe.

NEW QUESTION # 19

A global financial company sells financial products and services that include the following:

1. Bank Accounts
2. Loans
3. Insurance

The company has a core banking system that is state of the art and is the master system to store financial transactions, financial products and customer information. The core banking system currently processes 10M financial transactions per day. The CTO for the company is considering building a community port so that customers can review their bank account details, update their information and review their account financial transactions.

What should an integration architect recommend as a solution to enable customer community users to view their financial transactions?

- A. Use Iframe to display core banking financial transactions data in the customer community.
- B. Use Salesforce Connect to display the financial transactions as an external object.
- C. Use Salesforce External Service to display financial transactions in a community lightning page.
- D. Use Salesforce Connect to display the financial transactions as an external object.

Answer: C

NEW QUESTION # 20

Universal Containers (UC) owns a variety of cloud-based applications, including Salesforce, alongside several on premise applications. The on-premise applications are protected behind a corporate network with limited outside access to external systems. UC would like to expose data from the on-premise applications to Salesforce for a more unified user experience. The data should be accessible from Salesforce in real-time.

Which two actions should be recommended to fulfill this system requirement?

Choose 2 answers

- A. Develop an application in Heroku that connects to the on-premise database via an ODBC string and VPC connection.
- B. Develop custom APIs on the company's network that are invocable by Salesforce.
- C. Run a batch job with an ETL tool from an on-premise server to move data to Salesforce.
- D. Deploy MuleSoft to the on-premise network and design externally facing APIs to expose the data.

Answer: B,D

NEW QUESTION # 21

Northern Trail Outfitters (NTO) has recently implemented middleware for orchestration of services across platforms. The ERP system being used requires transactions be captured near real time at a REST endpoint initiated in Salesforce when creating an order object. Additionally, the Salesforce team has limited development resources and requires a low code solution.

Which two options will fulfill the use case requirements?

Choose 2 answers

- A. Use a process builder to create a Platform Event, selecting the record type as the Platform Event Name on insert of record.
- B. Use Remote Process Invocation fire and forget pattern on insert on the order object using Flow Builder.
- C. Implement a Workflow Rule with Outbound Messaging to send SOAP messages to the designated endpoint.
- D. Implement Change Data Capture on the order object and leverage the replay Id in the middleware solution.

Answer: B,D

NEW QUESTION # 22

A customer's enterprise architect has identified requirements around caching, queuing, error handling, alerts, retries, event handling, etc. The company has asked the Salesforce integration architect to help fulfill such aspects with their Salesforce program.

Which three recommendations should the Salesforce integration architect make?

Choose 3 answers

- A. Message transformation and protocol translation should be done within Salesforce. Recommend leveraging Salesforce native protocol conversion capabilities as middleware tools are NOT suited for such tasks
- B. Provide true message queuing for integration scenarios (including orchestration, process choreography, quality of service, etc.) given that a middleware solution is required.
- C. Event handling processes such as writing to a log, sending an error or recovery process, or sending an extra message, can be assumed to be handled by middleware.
- D. Event handling in a publish/subscribe scenario, the middleware can be used to route requests or messages to active data-event subscribers from active data-event publishers.
- E. Transform a fire-and-forget mechanism to request-reply should be handled by middleware tools (like ETL/ESB) to improve performance.

Answer: B,C,D

Explanation:

Explanation

The recommendations that the Salesforce integration architect should make to fulfill the requirements around caching, queuing, error handling, alerts, retries, event handling, etc. are based on the best practices and capabilities of the middleware tools. The recommendation B is valid because middleware tools can provide true message queuing for integration scenarios that require asynchronous processing, guaranteed delivery, load balancing, etc. The recommendation D is valid because middleware tools can handle various events that may occur during the integration process, such as logging errors, sending notifications, triggering recovery actions, etc. The recommendation E is valid because middleware tools can support the publish/subscribe pattern for event-driven integration, where the middleware can route messages from publishers to subscribers based on topics or filters. The recommendation A is not valid because transforming a fire-and-forget mechanism to request-reply does not improve performance, but rather increases the latency and complexity of the integration. The recommendation C is not valid because message transformation and protocol translation are tasks that are better suited for middleware tools than Salesforce, as they can handle different formats and protocols more efficiently and flexibly²³
