SAP C_SEC_2405최신핫덤프 - C_SEC_2405최신 기출문제

SAP인증 C_SEC_2405시험을 준비하기 위해 잠도 설쳐가면서 많이 힘들죠? ExamPassdump덤프가 고객님의 곁을 지켜드립니다. ExamPassdump에서 제공해드리는SAP인증 C_SEC_2405덤프는 실제SAP인증 C_SEC_2405시험문제를 연구하여 만든 공부자료이기에 최고의 품질을 자랑합니다. ExamPassdump덤프를 열심히 공부하여 멋진 IT전문가의 꿈을 이루세요.

SAP C_SEC_2405 시험요강:

주제	소개
주제 1	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
주제 2	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.
주제 3	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.

최신 SAP Certified Associate C_SEC_2405 무료샘플문제 (Q54-Q59):

질문 # 54
Which SAP Fiori deployment option requires the Cloud connector?

- A. SAP S/4HANA Cloud Public Edition
- B. SAP Fiori for SAP S/4HANA standalone front-end server
- C. SAP Business Technology Platform
- D. SAP S/4HANA embedded

정답：C

설명：
The SAP Business Technology Platform (BTP) deployment option for SAP Fiori requires the Cloud connector. The Cloud connector serves as a secure tunnel between SAP BTP and on-premise systems, enabling Fiori apps hosted on BTP to access data and services from on-premise SAP S/4HANA or other systems. It ensures secure communication without exposing on-premise systems to the public internet, supporting hybrid scenarios. SAP S/4HANA Cloud Public Edition operates entirely in the cloud, not requiring the Cloud connector for Fiori access. SAP Fiori for SAP S/4HANA standalone front-end server and SAP S /4HANA embedded deployments typically run within the same system or network, using direct connections rather than the Cloud connector. By requiring the Cloud connector for BTP, SAP ensures secure and efficient integration of Fiori apps with on-premise back-ends, supporting flexible deployment models while maintaining robust security standards in hybrid cloud environments.

질문 # 55
Which log types are available in the Administration Console of Cloud Identity Services? Note: There are 2correct answers to this question.

- A. Troubleshooting logs
- B. Change logs
- C. Usage logs
- D. Performance logs

정답：B,C

설명：
In theAdministration Console of Cloud Identity Services, the following log types are available:
* Change Logs (A):These logs capture all modifications made to configurations, user data, or system settings.
* Usage Logs (D):Usage logs provide details on how the system is being utilized, including user access patterns and system resource usage.
SAP Security References:
* SAP Cloud Identity Services Administration Guide
* SAP Help Portal: Log Management in Cloud Identity Services

질문 # 56
What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. The field delivered with content was changed but the old value was retained.
- B. Field values were changed as a result of the merge process.
- C. Field values have not been changed.
- D. Field values were unchanged and no new authorization was added.

정답：D

설명：
In SAP role maintenance, a status text value of "Old" indicates that the field values for an authorization in an existing role were unchanged and no new authorizations were added. This status appears during PFCG role maintenance when comparing or updating authorizations, showing that the authorization object or field values have not been modified since the last maintenance and no additional permissions have been included. It reflects a stable state, ensuring that the role's existing permissions remain intact without

unintended changes.
Option A is less precise, as it does not address the absence of new authorizations. Option B describes a scenario where changes were made but reverted, which is not "Old." Option C relates to merged authorizations, not the "Old" status. The "Old" status helps administrators confirm that no updates were applied, supporting consistent role management and preventing accidental modifications during maintenance in SAP systems.

질문 # 57
Which solution is NOT used to identify security recommendations for the SAP Security Baseline?

- A. SAP Security Optimization Service
- B. SAP EarlyWatch Alert
- C. SAP Security Notes
- D. SAP Code Vulnerability Analyzer

정답：D

설명：
The SAP Security Baseline provides guidelines and recommendations for securing SAP systems, and several tools support this process. SAP Security Notes deliver critical updates and patches to address specific security vulnerabilities, forming a core component of the baseline. SAP EarlyWatch Alert analyzes system configurations and performance, providing recommendations to enhance security and compliance. The SAP Security Optimization Service offers detailed assessments and tailored advice to align systems with security best practices. However, the SAP Code Vulnerability Analyzer is not used for identifying SAP Security Baseline recommendations, as it focuses on analyzing custom ABAP code for vulnerabilities, which is a separate process from the baseline's system-wide security focus. The analyzer targets development-level issues, not the broader configuration, authorization, or patch management addressed by the baseline. By leveraging Security Notes, EarlyWatch Alert, and Security Optimization Service, organizations can ensure their SAP systems adhere to the Security Baseline, mitigating risks and maintaining a robust security posture.

질문 # 58
Which of the following are Security Goals? Note: There are 2 correct answers to this question.

- A. Encryption
- B. Repudiation
- C. Information Integrity
- D. Identity Authentication

정답：C,D

질문 # 59
