And the pass rate of our AWS-Certified-Cloud-Practitioner practice guide is high to 98% to 100%.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q455-Q460):

NEW QUESTION # 455
A user needs to identify underutilized Amazon Elastic Block Store (Amazon EBS) volumes to reduce costs.
Which AWS service or feature will meet this requirement?

- A. AWS Budgets
- B. AWS Personal Health Dashboard

- C. AWS CloudTrail
- D. AWS Trusted Advisor

Answer: D

NEW QUESTION # 456

Which AWS service or feature can a company use to estimate AWS costs before provisioning workloads?

- A. AWS Budgets
- B. Cost Explorer
- C. AWS Cost and Usage Report
- D. AWS Pricing Calculator

Answer: D

NEW QUESTION # 457

A company is considering moving its on-premises data center to AWS.
What factors should be included in doing a Total Cost of Ownership (TCO) analysis? (Choose two.)

- A. Database engine capacity
- B. Application developer time
- C. Amazon EC2 instance availability
- D. Powerconsumption of the data center
- E. Labor costs to replace old servers

Answer: D,E

NEW QUESTION # 458

What is a responsibility of AWS in the shared responsibility model?

- A. Updating the network ACLs to block traffic to vulnerable ports.
- B. Updating the firmware on the underlying EC2 hosts.
- C. Patching operating systems running on Amazon EC2 instances.
- D. Updating the security group rules to block traffic to the vulnerable ports.

Answer: B

NEW QUESTION # 459

Which disaster recovery scenario offers the lowest probability of down time?

- A. Warm standby
- B. Multi-site active-active
- C. Pilot light
- D. Backup and restore

Answer: B

Explanation:
Backup and Restore: a simple, straightforward, cost-effective method that backs up and restores data as needed. Keep in mind that because none of your data is on standby, this method, while cheap, can be quite time-consuming.
Pilot Light: This method keeps critical applications and data at the ready so that it can be quickly retrieved if needed.
Warm Standby: This method keeps a duplicate version of your business' core elements running on standby at all times, which makes for a little downtime and an almost seamless transition.
Multi-Site Solution: Also known as a Hot Standby, this method fully replicates your company's data/applications between two or

more active locations and splits your traffic/usage between them. If a disaster strikes, everything is simply rerouted to the unaffected area, which means you'll suffer almost zero downtime. However, by running two separate environments simultaneously, you will obviously incur much higher costs.
