

2026 Valid Exam Observability-Self-Hosted-Fundamentals Syllabus | 100% Free Exam SolarWinds Observability Self-Hosted Fundamentals Pass4sure

FEDERAL PUBLIC SERVICE COMMISSION

Aga Khan Road Sector F-5/1

E-mail: fpse@fpse.gov.pk

Website: www.fpse.gov.pk

Islamabad the, 7th December 2025

No.F.2/1/2022-CE

PUBLIC NOTICE

CSS COMPETITIVE EXAMINATION (CE-2026)

1. CALL FOR APPLICATIONS:

- Applications for written part of CSS CE-2026 are invited well before **22nd December, 2025**.
- Examination shall be governed **Entirely by the CSS CE Rules, 2019** with no exceptions.
- Written Exam will tentatively commence from **4th February, 2026 (Wednesday)**.
- The examination shall be conducted in 19 cities in accordance with the prescribed rules.

2. ELIGIBILITY:

- Only candidates **Qualified in MPT CE-2026** are eligible to apply.
- Candidates must hold at least a **Bachelor's Degree (Second Division)**.
- Age must be **21-30 years** on the cutoff date; a **two-year relaxation** is admissible to categories specified in **Rule 6**.
- The **cutoff date is 31st December 2025** for determining age, qualification, domicile, and all other eligibility criteria, in accordance with **Rule 5**.
- Under **Rules 11(20) and 11(21)**, candidates are **provisionally admitted at their own risk**. If found ineligible at any stage, their candidature shall be **cancelled**, regardless of appearance or qualification of even the entire process. **Candidates must ensure full and complete compliance with all eligibility requirements before applying.**

3. PROCEDURE TO APPLY:

- Candidates who have qualified MPT-2026** must log in using their existing MPT Login/Password via the 'Apply Online' link on www.fpse.gov.pk. They must complete their profile and generate a 16-digit PSID for the online fee payment of Rs. 2300/-, well before **22nd December 2025**. (PSID is mandatory for online fee payment.)
- Fee can be paid online via the 1-Link facility using ATMs, mobile banking apps (Easypaisa, JazzCash, etc.), internet banking, or over the counter at any 1-Link member bank. Fee paid on old FPSC Challan Form (TR-6), or through cheque, bank draft, pay order will not be accepted."
- After depositing the fee, candidates must log in again via the 'Apply Online' link on www.fpse.gov.pk and enter the remaining required details to complete their online application.
- Online fee payment alone does not mean your application has been submitted. You must complete the application by selecting optional subjects as per Appendix-I, occupational groups, and exam centre after fee payment. After submission, ensure your application appears in 'Application History.' No changes may be allowed later.
- A signed hard copy of the online application, along with attested copies of educational documents, CNIC, domicile, and four photographs, must reach FPSC **before 1st January 2026**. Documents received after the deadline will not be accepted.
- Admission Certificates for the CSS Written Examination will be uploaded on the FPSC website by **15th January 2026**. Candidates must download themselves; no separate postal intimation will be issued.
- For further information or queries, please contact: **UAN 051-111-000-248**

(Muhammad Ramzan Malik)

2026 Latest iPassleader Observability-Self-Hosted-Fundamentals PDF Dumps and Observability-Self-Hosted-Fundamentals Exam Engine Free Share: https://drive.google.com/open?id=1g-Lnx09vGXsFBomvzW9AgCfW_HyBayH_

Our Observability-Self-Hosted-Fundamentals exam prep can bring you high quality learning platform to pass the variety of exams. Observability-Self-Hosted-Fundamentals guide dumps are elaborately composed with major questions and answers. Observability-Self-Hosted-Fundamentals test question only needs 20 hours to 30 hours to practice. There is important to get the Observability-Self-Hosted-Fundamentals Certification as you can. There is a fabulous product to prompt the efficiency--the Observability-Self-Hosted-Fundamentals exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams.

Our Observability-Self-Hosted-Fundamentals exam questions boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our Observability-Self-Hosted-Fundamentals test practice materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam.

Each version of our Observability-Self-Hosted-Fundamentals Study Guide provides their own benefits to help the clients learn the Observability-Self-Hosted-Fundamentals exam questions efficiently.

Observability-Self-Hosted-Fundamentals Guide Torrent - Observability-Self-Hosted-Fundamentals Exam Prep - Observability-Self-Hosted-Fundamentals Pass Rate

We have a team of experts curating the real Observability-Self-Hosted-Fundamentals questions and answers for the end users. We are always working on updating the latest Observability-Self-Hosted-Fundamentals questions and providing the correct Observability-Self-Hosted-Fundamentals answers to all of our users. We provide free updates for one year from the date of purchase. You can benefit from the updates Observability-Self-Hosted-Fundamentals Preparation material, and you will be able to pass the Observability-Self-Hosted-Fundamentals exam in the first attempt.

SolarWinds Observability Self-Hosted Fundamentals Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which two of the following settings are automatically enabled for a user with the default set of user permissions in SolarWinds' Hybrid Cloud Observability (HCO)? (Choose two.)

- A. disable session time out
- B. view all existing reports
- C. view all active alerts
- D. self-manage dashboards

Answer: B,C

Explanation:

When a new user account is created in the SolarWinds Platform, it is assigned a set of "Default" permissions designed to provide a "Read-Only" baseline of visibility. According to the SolarWinds Platform User Account Management guide, the platform is configured to ensure that new users can immediately benefit from the monitoring data without having the power to accidentally modify the environment.

Specifically, view all active alerts (C) and view all existing reports (D) are enabled by default. This ensures that any team member with a login can see the current health of the infrastructure and access historical performance data. These are considered "Passive" rights that allow for operational awareness. Conversely, disable session time out (A) is a security-sensitive setting that is typically disabled by default to prevent abandoned sessions from remaining active on public or shared workstations. Self-manage dashboards (B), while a common feature, often requires explicit "Dashboards" or "View" management permissions to be toggled on by an administrator to prevent a proliferation of unmanaged or redundant dashboard pages within the database. By defaulting to alert and report visibility, SolarWinds follows the principle of providing immediate information for troubleshooting while reserving management and security-override functions for designated administrators.

NEW QUESTION # 33

A report was created to contain information wanted by different users, even if the users can view the nodes in the web console. How is access to the report restricted?

- A. change the content parameters of the report to restrict specific users
- B. set an account limitation to restrict access to nodes by specific users
- C. create a report limitation and apply it to specific users' accounts
- D. remove report edit rights from specific users not allowed to view report

Answer: C

Explanation:

In the SolarWinds Platform, visibility of specific reports is managed through Report Limitations. According to the SolarWinds Platform Reporting Guide, even if a user has general permissions to view nodes, an administrator can restrict their access to specific reports to ensure data privacy or to simplify their workspace.

By creating a report limitation, you define a rule-such as filtering by a custom property or report category- and apply it directly to a user's account settings. Once applied, the user will only see the reports that match the criteria of that limitation when they navigate to the Reports section of the Web Console. This is different from a standard Account Limitation (Option D), which restricts the visibility of the nodes themselves across the entire platform. Using a report-specific limitation allows the user to still monitor the nodes in real-time views while preventing them from accessing sensitive historical or inventory data contained in specific PDF or web-based reports.

NEW QUESTION # 34

Web console users are complaining of widgets moving within the web console view. What is causing this movement?

- A. screen resolution on user's computers
- **B. users have edit view rights and are editing views used by multiple users**
- C. unsupported browser is used
- D. single user has admin rights and is changing views in account settings

Answer: B

Explanation:

Layout instability in the SolarWinds Web Console is almost always a result of overlapping permissions on shared views. According to the SolarWinds Platform Administrator Guide, summary views (dashboards) are often shared across entire departments or user groups.

The cause of widgets "moving" unexpectedly is typically that users have edit view rights and are editing views used by multiple users (D). In SolarWinds, if a view is assigned to multiple people and those people have the "Edit View" permission, any change made by one user-such as dragging a widget to a different column, adding a new resource, or removing an old one-is a global change to that view's definition in the database.

When User A rearranges the dashboard to suit their screen or preference, User B will see those changes the next time their page refreshes. This creates a "tug-of-war" scenario where different users keep moving widgets back and forth. To prevent this, administrators should follow the principle of least privilege: remove

"Edit View" rights from standard users and only allow a small number of designated "View Administrators" to make changes. If individual personalization is required, the administrator should create unique, personal views for each user or group so that their edits do not impact the wider organization.

NEW QUESTION # 35

Which two of the following use cases are utilized for account limitations? (Choose two.)

- A. access to features by departments
- **B. access to monitored data by departments**
- **C. access to monitored data by device types**
- D. polling of devices by location

Answer: B,C

Explanation:

Account Limitations are security filters applied at the user or group level to control data visibility within the Web Console. According to the SolarWinds Platform User Account Management guide, these limitations do not affect how data is collected (polling), but rather who can see the resulting data.

The two primary use cases are:

* Access by Department (A): Organizations often use custom properties (like "Department") to tag nodes. By applying an account limitation, you can ensure that the "Finance" team only sees servers tagged for their department, while the "IT" team sees the entire infrastructure.

* Access by Device Type (B): Limitations can be set based on vendor, machine type, or other attributes.

For instance, a Network Operations Center (NOC) team might be limited to seeing only "Cisco" or "Juniper" devices to keep their dashboard focused purely on networking gear.

Option C is incorrect because "access to features" (like the ability to manage alerts or reports) is handled via Account Permissions, not limitations. Option D is incorrect because "polling of devices" is a backend function of the Polling Engines, which is managed via the "Manage Nodes" section rather than user-facing account limitations.

NEW QUESTION # 36

Which two of the following items are required to use Anomaly-Based Alerts in SolarWinds Hybrid Cloud Observability (HCO)? (Choose two.)

- A. Platform Connect
- B. internet connection
- C. AIOps and machine-learning module
- D. advanced machine-learning feature

Answer: A,D

Explanation:

Anomaly-Based Alerting is a premier feature of Hybrid Cloud Observability that moves beyond static thresholds to identify performance deviations based on historical behavior. According to the SolarWinds HCO Administrator Guide, this feature relies on cloud-assisted analytics to process complex datasets. To enable this, two specific components are required:

* Advanced Machine-Learning Feature: This is the functional logic within the HCO platform that identifies patterns and establishes "normal" baselines for metrics like CPU load or interface utilization.

* Platform Connect: This is the essential bridge that links the self-hosted HCO instance to the SolarWinds cloud-based AIOps engine. Because anomaly detection requires significant computational power to analyze long-term historical trends, the heavy processing is often offloaded. Platform Connect ensures that the necessary metadata can be analyzed securely to generate the dynamic thresholds used for these alerts.

Without Platform Connect, the local server cannot access the machine-learning models required to calculate what constitutes an "anomaly" versus standard operational variance. This architecture allows HCO to provide high-level AIOps capabilities without requiring massive localized hardware for every installation.

NEW QUESTION # 37

.....

SolarWinds Certification Observability-Self-Hosted-Fundamentals Exam is very popular among the IT people to enroll in the exam. Passing SolarWinds certification Observability-Self-Hosted-Fundamentals exam can not only change your work and life can bring, but also consolidate your position in the IT field. But the fact is that the passing rate is very low.
