

EAEP2201 Certification Questions | Technical EAEP2201 Training

P.S. Free & New EAEP2201 dumps are available on Google Drive shared by ActualCollection: <https://drive.google.com/open?id=1tAsK7U2PXJIFzifj-r8rM8XmqtDnF1j>

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in help you gain the success. The EAEP2201 exam prep from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study. More importantly, the good habits will help you find the scientific prop learning methods and promote you study efficiency, and then it will be conducive to helping you pass the EAEP2201 Exam in a short time. So hurry to buy the EAEP2201 test guide from our company, you will benefit a lot from it.

Esri EAEP2201 Exam covers a range of topics related to the administration of Esri enterprise GIS software, including installation and configuration, database management, security, licensing, and performance tuning. EAEP2201 exam also covers topics related to web services, including the administration of ArcGIS Server and ArcGIS Online. Candidates are expected to have hands-on experience with Esri software and be familiar with industry best practices for GIS administration.

Technical EAEP2201 Training, EAEP2201 Hot Spot Questions

The Esri EAEP2201 PDF dumps file is the most convenient way to prepare for the examination. This document is a collection of most probable and realistic Enterprise Administration Professional 2201 EAEP2201 dumps. With this PDF file, you have Enterprise Administration Professional 2201 EAEP2201 questions that will appear in the real exam. You can immediately download our EAEP2201 PDF Questions from the ActualCollection website after payment. Without place and time limits, you can use the PDF format of Enterprise Administration Professional 2201 EAEP2201 real exam questions via smartphones, tablets, and laptops.

Earning the Esri EAEP2201 Certification provides a recognized and respected credential that demonstrates an individual's expertise in ArcGIS Enterprise administration. Enterprise Administration Professional 2201 certification can help individuals advance their careers by demonstrating their skills and knowledge to potential employers. Additionally, organizations that employ certified professionals can be confident in the expertise and knowledge of their staff, which can lead to increased efficiency and productivity.

Esri Enterprise Administration Professional 2201 Sample Questions (Q38-Q43):

NEW QUESTION # 38

A GIS analyst publishes a 3D scene from ArcGIS Pro to ArcGIS Enterprise to create a hosted 3D scene layer. Which data store hosts the data for the 3D scene layer?

- A. Raster
- B. Relational
- C. Tile cache

Answer: C

Explanation:

Hosted 3D scene layers are stored in the tile cache data store, which is optimized for storing and serving cached 3D content, such as buildings and elevation surfaces. This data store supports scene layers published from ArcGIS Pro and allows for efficient rendering in 3D web scenes within the portal.

The relational data store is used for feature layers and structured tabular data. The raster data store supports large raster datasets for imagery layers. Neither is appropriate for 3D scene layer content. Thus, for hosted 3D scenes, the correct data store is the tile cache.

Reference Source: ArcGIS Enterprise Help - Data store types and publishing workflows

NEW QUESTION # 39

An ArcGIS Pro user receives the following error when trying to publish to ArcGIS Enterprise:

"Unable to publish to ArcGIS Server, error 001369: failed to create service" The ArcGIS Server logs reveal:

- * Failed to create service
- * Internal server error
- * Unable to instantiate class for XML schema type
- * Invalid XML registry file
- * 390 ArcSOC processes running
- * Server uses only half of available RAM

Which action should the administrator perform?

- **A. Use more dedicated instances instead of shared**
- B. Increase the non-interactive desktop heap size
- C. Scale up the ArcGIS Server machine resources

Answer: A

Explanation:

This issue is consistent with desktop heap exhaustion, especially when a high number of ArcSOC processes (e.g., 390) are running on Windows. Desktop heap is a limited memory resource used for GUI and system object management. When it runs out, services can fail to start and produce XML-related errors.

Increasing the non-interactive desktop heap size in the Windows registry resolves this.

From Esri documentation:

"If the Windows desktop heap size is too low, ArcGIS Server may be unable to create new processes (ArcSOC), causing service failures and related internal server errors."

* Option B is a generic fix and won't address the specific heap exhaustion issue.

* Option C doesn't help if the root issue is OS-level heap size limits.

Reference: ArcGIS Enterprise - ArcSOC process limits and Windows desktop heap size

NEW QUESTION # 40

A GIS administrator must automate certain data workflows and administrative tasks in ArcGIS Enterprise.

The administrator must meet several requirements:

- * The processes and methods must be well and thoroughly documented
 - * An option must be provided to modify the processes on the fly
 - * Scripts and processes must be shared to different individuals throughout the ArcGIS Enterprise organization
- Which ArcGIS Server role should be used to meet these requirements?

- A. ArcGIS Notebook Server
- **B. ArcGIS Workflow Manager Server**
- C. ArcGIS GeoEvent Server

Answer: B

NEW QUESTION # 41

A GIS analyst is working with referenced data and needs to offload a large dataset of millions of oil rig locations from the geodatabase. The data must be quickly accessible for spatial visualization and queryable within ArcGIS Enterprise.

Which ArcGIS Data Store type should be configured?

- A. External big data file share
- B. Relational
- **C. Spatiotemporal**
- D. Tile cache

Answer: C

Explanation:

The Spatiotemporal big data store is designed for massive datasets and optimized for high-speed visualization, time-enabled querying, and big data analytics. It is ideal for storing millions of point features such as sensors or oil rig locations, especially when performance and scalability are critical.

From ArcGIS documentation:

"The spatiotemporal big data store is designed for writing and querying large volumes of spatial and temporal data. It's optimized for visualizing high-density datasets in web maps."

* Option B (Relational) works for moderate data volumes but may not scale well.

* Option C supports cached tiles, not dynamic feature access.

Reference: ArcGIS Enterprise - Choosing the Right Data Store Type for Large Datasets

NEW QUESTION # 42

An organization wants to use the standard feature analysis tools available in ArcGIS Enterprise to create hosted feature layers for planning and design.

Which data store is required for this work?

- A. Spatiotemporal big data store
- B. Tile cache data store
- **C. Relational data store**
- D. File-based geodatabase

Answer: C

Explanation:

The standard feature analysis tools in ArcGIS Enterprise (e.g., buffer, overlay, aggregate points) require hosted feature layers, which depend on the relational data store (a component of ArcGIS Data Store). The relational data store is the default location for hosting feature layers.

From ArcGIS Enterprise documentation:

"To use the standard spatial analysis tools and create hosted feature layers, the ArcGIS Data Store (relational) must be configured and set as the default hosting location."

* Option A (spatiotemporal big data store) is used for real-time and big data feeds, not standard analysis.

* Option C supports cached tiles, not feature layers.

Reference: ArcGIS Enterprise - Configuring the Relational Data Store for Hosting Feature Layers
