CFA Institute Certificate in ESG Investing Sample Questions (Q185-Q190):

NEW QUESTION # 185

A disadvantage of the Global Real Estate Sustainability Benchmark (GRESB) framework is that it:

- A. does not provide peer group comparison.
- B. does not provide environmental impact reduction targets.
- C. is easily sidestepped by majority owners who control how it is applied.

Answer: C

Explanation:

The GRESB framework's application can be influenced or controlled by majority owners, which may limit its effectiveness in assessing the sustainability of real estate investments if it is not applied rigorously. (ESGTextBook[PallasCatFin], Chapter 8, Page 451)

NEW QUESTION # 186

According to the Global Sustainable Investment Alliance (GSIA), as of 2020, the largest sustainable investment strategy globally is:

- A. ESG integration
- B. exclusionary screening
- C. corporate engagement and shareholder action

Answer: A

Explanation:

According to the Global Sustainable Investment Alliance (GSIA), as of 2020, the largest sustainable investment strategy globally is ESG integration.

Definition of ESG Integration: ESG integration involves the systematic and explicit inclusion of environmental, social, and governance (ESG) factors into financial analysis by investment managers.

GSIA Reports: The GSIA's Global Sustainable Investment Review highlights that ESG integration has become the dominant strategy among sustainable investment practices. This approach is favored due to its comprehensive consideration of ESG factors in traditional financial analysis.

Growth Trends: The increasing awareness of ESG risks and opportunities has driven the growth of ESG integration, making it the largest strategy in terms of assets under management (AUM).

CFA ESG Investing Reference:

The CFA Institute's resources on ESG integration emphasize the importance and prevalence of this strategy among investors. It outlines how ESG integration helps in identifying material risks and opportunities that could impact financial performance, thus supporting better investment decisions.

NEW QUESTION # 187

Which of the following UK Stewardship Code principles is not addressed in the European Fund and Asset Management Association (EFAMA) Code? The principle that institutional investors should:

- A. monitor their investee companies
- B. report periodically on their stewardship and voting activities
- C. have a robust policy on managing conflicts of interest in relation to stewardship

Answer: B

Explanation:

The UK Stewardship Code and the European Fund and Asset Management Association (EFAMA) Code both aim to enhance the quality of stewardship and engagement by institutional investors. However, there are some differences in the principles they address.

1. UK Stewardship Code Principles: The UK Stewardship Code outlines several principles for institutional investors, including monitoring investee companies, managing conflicts of interest, and reporting on stewardship and voting activities.

2. EFAMA Code Principles: The EFAMA Code, while similar in many respects, does not explicitly address all the principles covered by the UK Stewardship Code. One of the key differences is the requirement for institutional investors to report periodically on their stewardship and voting activities.

3. Reporting on Stewardship and Voting Activities: The UK Stewardship Code emphasizes the importance of transparency and

accountability by requiring institutional investors to report periodically on their stewardship and voting activities. This principle is not explicitly addressed in the EFAMA Code, making it a notable difference between the two frameworks.

References from CFA ESG Investing:

Stewardship Codes: The CFA Institute highlights the importance of stewardship codes in promoting responsible investment practices. While both the UK Stewardship Code and the EFAMA Code encourage active engagement and monitoring of investee companies, the UK code places a stronger emphasis on reporting and transparency in stewardship activities.

Transparency in Stewardship: Reporting on stewardship and voting activities is crucial for ensuring that institutional investors are accountable to their beneficiaries and stakeholders. The UK Stewardship Code's focus on this principle underscores its commitment to enhancing the quality and transparency of stewardship practices.

In conclusion, the principle that institutional investors should report periodically on their stewardship and voting activities is not addressed in the EFAMA Code, making option B the verified answer.

NEW QUESTION # 188

Which of the following greenhouse gases (GHGs) has the longest lifetime in the atmosphere?

- A. Methane
- B. Carbon dioxide
- C. Fluorinated gas

Answer: C

Explanation:

Among the greenhouse gases (GHGs) listed, fluorinated gases have the longest atmospheric lifetimes. Here's a detailed breakdown: Methane (CH₄):

Methane is a potent greenhouse gas with a significant impact on global warming. However, its atmospheric lifetime is relatively short, approximately 12 years.

Carbon Dioxide (CO₂):

Carbon dioxide is the most prevalent greenhouse gas emitted by human activities, particularly from the burning of fossil fuels. CO₂ can remain in the atmosphere for hundreds to thousands of years, but it is still not the longest-lived compared to fluorinated gases.

Fluorinated Gases:

Fluorinated gases, such as hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆), are synthetic gases that have extremely long atmospheric lifetimes, often ranging from a few years to thousands of years. For instance, SF₆ can remain in the atmosphere for up to 3,200 years.

These gases are typically used in industrial applications and have a high global warming potential (GWP) due to their longevity and heat-trapping capabilities.

CFA ESG Investing Reference:

The CFA Institute's ESG curriculum emphasizes understanding the different types of greenhouse gases, their sources, and their impacts on climate change. The curriculum specifically points out the longevity and high global warming potential of fluorinated gases, which makes them a critical focus in ESG assessments and climate risk evaluations.

NEW QUESTION # 189

According to the Sustainability Accounting Standards Board (SASB), GHG emission is material for more than 50% of the industries in which sector?

- A. Extractives and minerals processing
- B. Technology and communications
- C. Health care

Answer: A

Explanation:

According to the Sustainability Accounting Standards Board (SASB), greenhouse gas (GHG) emissions are material for more than 50% of industries in the extractives and minerals processing sector. This sector's activities are closely associated with significant GHG emissions due to the nature of resource extraction and processing operations, making GHG management a critical aspect of their environmental performance.
