- A. Create a cronjob that runs bin/magento indexer:reindex periodically.

- A. In the cloud app configuration YAML file, the deployment strategy must be defined in the global phase.

**Answer: C**

### NEW QUESTION # 51

A Developer using API Mesh is assigned to optimize the integration of several third-party APIs with Adobe Commerce. Part of this task is to address performance issues such as the n+1 problem. In this scenario, which option should the Developer implement?

- A. Use API Mesh as a middleware for aggregating data from APIs back into Adobe Commerce.
- B. Use API Mesh batching to combine multiple API requests into a single query.
- C. Use API Mesh to replace the existing APIs with direct GraphQL queries.

**Answer: B**

Explanation:

The n+1 problem occurs when multiple queries are made individually instead of being grouped, leading to inefficient performance. API Mesh batching solves this by combining multiple GraphQL requests into a single query, reducing round trips and improving response times.

A is incorrect: API Mesh does not "replace" APIs but orchestrates them

C is partially correct but too general; aggregation alone does not solve the n+1 problem

B is correct: batching specifically addresses n+1 query performance issues.

- B. Install and activate the native Adobe Commerce module which activates payment.
- C. Repurpose the native Cash on Delivery method.

**Answer: B**

Explanation:

Adobe Commerce B2B includes a native "Payment on Account" module, which is part of the B2B suite. This module allows customers with company accounts to place orders on account (credit).

A (repurpose COD) is a hack and not recommended.

C (create new payment method) is unnecessary since Adobe Commerce already includes this B2B feature.
