The VMware 3V0-21.23 certification exam offers a great opportunity to advance your career. With the VMware vSphere 8.x Advanced Design certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the VMware vSphere 8.x Advanced Design (3V0-21.23) exam you can stand out in a crowded job market. The VMware vSphere 8.x Advanced Design (3V0-21.23) certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

If you want to get VMware certification, you can save a lot of time and effort with our 3V0-21.23 study materials. We know that you must have a lot of other things to do, and our products will relieve your concerns in some ways. First of all, 3V0-21.23 exam materials will combine your fragmented time for greater effectiveness, and secondly, you can use the shortest time to pass the exam to get your desired certification. Our 3V0-21.23 Study Materials allow you to improve your competitiveness. With the help of our 3V0-21.23 study guide, you will be the best star better than others

Dumps4PDF is a reliable site offering the 3V0-21.23 valid study material supported by 100% pass rate and full money back guarantee. Besides, our 3V0-21.23 training material is with the high quality and can simulate the actual test environment, which make

you feel in the real test situation. You can get the latest information about the 3V0-21.23 real test, because our Dumps4PDF will give you one year free update. You can be confident to face any difficulties in the 3V0-21.23 actual test no matter any changes.

VMware vSphere 8.x Advanced Design Sample Questions (Q27-Q32):

NEW QUESTION # 27

An architect is designing an environment for a retail customer. The design will use a single small vCenter Server Appliance and a cluster of eight ESXi hosts at a remote site. There is a single 10 GbE connected network at the remote site to support all management services. It is not possible to create additional management networks at the remote site. Virtual machine backups at the site will be dependent on the vCenter Server being available.

Which design decision should the architect make to maximize availability for backups?

- A. The vCenter Server Appliance will be protected with vSphere Fault Tolerance.
- B. The cluster will be configured to use vSphere DRS in fully automated mode.
- C. The cluster will be configured with vSphere HA and set to restart virtual machines based on guest operating system heartbeat monitoring.
- D. vCenter Server High Availability will be configured.

Answer: C

Explanation:

All hosts must have at least one management network in common.

NEW QUESTION # 28

An architect is responsible for the following customer considerations in a hardware refresh:

Capacity planning will ensure that the environment does not exceed 70% of peak-average utilization on deployment.

CPU purchases will favor clock speed and last level cache over cores per socket.

Additional ESXi hosts will be added to the cluster when CPU or memory utilization exceeds 70% for 3 consecutive business days.

Path Selection policy will be set to round robin and set to switch paths with every SCSI command.

vCPU to pCPU ratio may not exceed 5:1.

What are three considerations when designing for performance? (Choose three.)

- A. Path Selection policy will be set to round robin and set to switch paths with every SCSI command.
- B. Additional ESXi hosts will be added to the cluster when CPU or memory utilization exceeds 70% for 3 consecutive business days.
- C. All ESXi hosts must have four paths to the storage array.
- D. Capacity planning will ensure that the environment does not exceed 70% of peak-average utilization on deployment.
- E. CPU purchases will favor clock speed and last level cache over cores per socket.
- F. vCPU to pCPU ratio may not exceed 5:1.

Answer: B,E,F

Explanation:

vCPU to pCPU ratio may not exceed 5:1.

This ensures that the virtual CPU (vCPU) allocation is balanced with the physical CPU (pCPU) resources. A ratio that exceeds 5:1 can lead to CPU contention, negatively impacting performance. By maintaining this ratio, the architect ensures that the workloads have sufficient CPU resources for optimal performance.

CPU purchases will favor clock speed and last level cache over cores per socket.

This is an important performance consideration. Choosing CPUs with higher clock speed and larger last-level cache (LLC) ensures that workloads requiring higher single-threaded performance are optimized. This decision favors workloads that benefit from faster CPU processing and larger cache sizes, improving overall performance.

Additional ESXi hosts will be added to the cluster when CPU or memory utilization exceeds 70% for 3 consecutive business days.

This performance-related decision ensures that the environment remains responsive under load. Adding additional hosts when resource utilization exceeds thresholds helps prevent bottlenecks and ensures continued optimal performance by distributing workloads across more physical hosts.

NEW QUESTION # 29

A company has the business goal of automated, centralized, and efficient management of the data center. Which statement would be included in the conceptual design to support this business goal?

- A. Reduce the cost of providing IT services to the organization.
- **B. Join all vCenter instances to a single vCenter Single Sign-On domain.**
- C. Store templates and ISO files on a dedicated Virtual Machine File System (VMFS) datastore.
- D. Place the management cluster and the compute cluster in the same rack.

Answer: B

Explanation:

To support the business goal of automated, centralized, and efficient management of the data center, joining all vCenter instances to a single vCenter Single Sign-On (SSO) domain helps in streamlining management and improving security. By centralizing authentication and enabling single sign-on, the organization can achieve a more efficient and consistent management experience across the entire data center. This eliminates the need to manage multiple authentication systems, allowing for better integration, automation, and centralized control over all vCenter instances.

NEW QUESTION # 30

An organization's existing vSphere environments are configured for Enhanced Linked Mode. The DevOps team automates the creation of hardened virtual machine images for various operating systems. Their continuous integration/continuous delivery (CI/CD) pipeline runs a task at the end of a successful build, which uploads the Open Virtualization Format (OVF) image to a sandbox content library, deploys a virtual machine from the image, and then destroys these objects after quality checks are complete.

The following requirements have been noted:

- All content libraries and images must be centrally created and managed.
- All images must be capable of being updated.
- All images must be refreshed and available to subscribed libraries within 24 hours.
- All images must provide details of the image contents and versions.
- All images must be capable of being reverted to a previous version.
- All images must be capable of having the hardware and guest operating system customized during deployment.

Which three recommendations should the architect make to design a content library solution that will meet these requirements- (Choose three.)

- **A. Add a new subscriber library from each vSphere environment.**
- **B. Create a local content library in the primary vSphere environment and enable publishing.**
- C. Deploy the OVF images to vSphere and clone as an OVF template to a local content library.
- **D. Deploy the OVF images to vSphere and clone as a VM template to a local content library.**
- E. Edit the Auto Sync Refresh Interval advanced setting for each subscribed library.
- F. Create and publish a new subscription to a new subscriber library for each target vSphere environment.

Answer: A,B,D

Explanation:

As only VM templates can be edited and keep different versions.

NEW QUESTION # 31

What are two benefits of the VMware Validated Solutions? (Choose two.)

- **A. Provide best practice design guidance**
- B. Provide faster time to value for VMware Cloud Foundation
- C. Provide comprehensive manual deployment guidance and day 2 operational practices
- **D. Provide prescriptive runbooks to deploy VMware solutions**
- E. Deploy technical validated implementations on VMware Cloud Foundation

Answer: A,D

Explanation:

VMware Validated Solutions offer prescriptive, step-by-step runbooks that help guide users through the deployment process. These runbooks ensure that the implementation follows VMware's recommended practices, reducing complexity and ensuring consistency

across deployments.

VMware Validated Solutions are designed based on VMware's best practices, ensuring that the deployed solution is optimized for performance, security, and scalability. This helps organizations achieve a reliable and efficient infrastructure aligned with VMware's recommended guidelines.
