Pdf CompTIA CS0-002 Brindumps, Most CS0-002 Reliable Questions

There is no shortcut to CS0-002 exam questions success except hard work. You cannot expect your dream of earning the CompTIA CERTIFICATION EXAM come true without using updated study material CompTIA Cybersecurity Analyst (CySA+) Certification Exam (CS0-002) exam questions. Success in the CS0-002 exam adds more value to your resume and helps you land the best jobs in the industry.

CompTIA CS0-002 certification exam covers a wide range of topics that are essential for effective cybersecurity analysis. Some of the key areas that are covered in CS0-002 exam include threat and vulnerability management, security architecture and toolsets, security operations and incident response, and compliance and governance. By passing CS0-002 Exam, individuals demonstrate their ability to analyze security risks and develop effective strategies to mitigate those risks.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q106-Q111):

NEW QUESTION # 106

A cybersecurity analyst routinely checks logs, querying for login attempts. While querying for unsuccessful login attempts during a five-day period, the analyst produces the following report:

| Users | Login Attempts |
|---------|----------------|
| User 1 | 4 |
| User 2 | 8 |
| User 3 | 5 |
| User 4 | 50 |
| User 5 | 40 |
| User 6 | 10 |
| User 7 | 10 |
| User 8 | 4 |
| User 9 | 8 |
| User 10 | 2 |

Which of the following BEST describes what the analyst Just found?

- A. Users 4 and 5 are using their credentials to transfer files to multiple servers.
- **B. A bot is running a brute-force attack in an attempt to log in to the domain.**
- C. An unauthorized user is using login credentials in a script.
- D. Users 4 and 5 are using their credentials to run an unauthorized scheduled task targeting some servers In the cloud.

Answer: B

NEW QUESTION # 107

While going through successful malware cleanup logs, an analyst notices an old worm that has been replicating itself across the company's network. Reinfection of the malware can be prevented with a patch; however, most of the affected systems cannot be patched because the patch would make the system unstable. Which of the following should the analyst recommend to best prevent propagation of the malware throughout the network?

- A. Patching systems when possible and monitoring the rest of them
- **B. Segmenting the network to include all legacy systems**
- C. Scanning the entire network for malware weekly
- D. Placing vulnerable devices behind a firewall

Answer: B

Explanation:

Segmenting the network to include all legacy systems is a strategy that can prevent the propagation of the malware throughout the network, by isolating the systems that cannot be patched from the rest of the network. Segmenting the network can also reduce the exposure and impact of the malware, by limiting its access to other resources or systems.

NEW QUESTION # 108

Which of the following items represents a document that includes detailed information on when an incident was detected, how impactful the incident was, and how it was remediated, in addition to incident response effectiveness and any identified gaps needing improvement?

- A. Chain of custody report
- **B. Lessons learned report**
- C. Forensic analysis report
- D. Trends analysis report

Answer: B

NEW QUESTION # 109

An organization has the following risk mitigation policy:

Risks with a probability of 95% or greater will be addressed before all others regardless of the impact.

All other prioritization will be based on risk value.

The organization has identified the following risks:

| Risk | Probability | Impact |
|------|-------------|-----------|
| A | 95% | \$110,000 |
| B | 99% | \$100,000 |
| C | 50% | \$120,000 |
| D | 90% | \$50,000 |

Which of the following is the order of priority for risk mitigation from highest to lowest?

- A. D, A, C, B
- B. D, A, B, C
- C. A, B, D, C
- D. A, B, C, D

Answer: A

Explanation:

According to the risk mitigation policy, risks with a probability of 95% or greater will be addressed first, regardless of the impact. Therefore, risk D is the highest priority, as it has a probability of 95% and an impact of \$100,000. The next priority is risk A, which has a probability of 90% and an impact of \$200,000. The remaining risks will be prioritized based on their risk value, which is calculated by multiplying the probability and the impact. Risk C has a risk value of \$40,000 (80% x \$50,000), while risk B has a risk value of \$30,000 (60% x \$50,000). Therefore, risk C is higher priority than risk B.

NEW QUESTION # 110

A security analyst scanned an internal company subnet and discovered a host with the following Nmap output.

```
Nmap -Pn 10.233.117.0/24

Host is up (0.0021s latency)
Not shown: 987 filtered ports

PORT      STATE SERVICE
22/tcp    open  ssh
135/tcp   open  msrpc
445/tcp   open  microsoft-ds
137/udp   open  netbios-ns
3389/tcp  open  ms-term-serv
```

Based on the output of this Nmap scan, which of the following should the analyst investigate FIRST?

- A. Port 135
- B. Port 22
- C. Port 445
- D. Port 3389

Answer: A
