With C_ACDET_2506 actual exam engine you will experience an evolution of products coupled with the experience and qualities of expertise. All the questions of C_ACDET_2506 free pdf are checked chosen by several times of refining and verification, and all the C_ACDET_2506 answers are correct and easy to understand. You can experience yourself a new dawn of technology with C_ACDET_2506 exam torrent. We guarantee you 100% pass. If you are still worried, you can read our refund policy. In case of failure, full refund.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 2	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate’s ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 3	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

SAP C_ACDET_2506 Valid Real Test - C_ACDET_2506 Books PDF

In order to make all customers feel comfortable, our company will promise that we will offer the perfect and considerate service for all customers. If you buy the C_ACDET_2506 training files from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the C_ACDET_2506 learning dumps, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our C_ACDET_2506 study questions well. We believe our perfect service will make you feel comfortable when you are preparing for your exam.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which document outlines the roles and responsibilities for the SAP Deployment Lead assigned to your project?

- A. Onboard Resource Center
- **B. Deployment Description**
- C. Partner Statement of Work
- D. Inline Help

Answer: B

NEW QUESTION # 42

During the configuration of a new custom field, after it's been saved but before the field has been published, you realize that you set the wrong field type. What is the next step you should take to resolve the issue?

- **A. Delete the field and create a new field with the same name and the intended field type**
- B. Change the field type by selecting the intended type in the dropdown and Save
- C. Mark the field as Hidden, and create a new field with a slightly different name and the intended field type
- D. Clear and recreate the field with the same field name and the intended field type

Answer: A

Explanation:

Once a custom field has been saved, its field type cannot be changed—even if the field has not yet been published. The correct approach is to delete the incorrect field and create a new one with the intended type, optionally using the same name to maintain naming consistency. Clearing or hiding the field does not solve the issue, and the system does not allow type changes via the UI once saved. This approach is standard in SAP Ariba field management to avoid data integrity issues.

NEW QUESTION # 43

When you have created a new custom field and marked it as reportable, saved and published your changes, the field does not show up in your reports. How can you resolve the issue?

- **A. You created the custom field in a different module. Custom fields must be created in the same module where the reports are generated to show up correctly.**

- B. You forgot to run the task Retrieve flexible fields metadata for reporting under Manage > Administration > Reporting Manager > Flex Field Reporting
- C. You need to wait 2 hours for the schema to refresh. Any change to the object model will be automatically synchronized to SAP Ariba Analytics on regular intervals
- D. You did not assign the custom field to the appropriate report category. Ensure that the field is linked to the correct category for it to appear in reports.

Answer: B

NEW QUESTION # 44

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations
- B. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions
- C. To advise the customer and partner in solution configurations
- D. To Test and Validate the solution prior to go-live

Answer: A

NEW QUESTION # 45

During a Bluefield migration, you discover missing flex master data templates. What do you do?

- A. Ignore them
- B. Use reporting workaround
- C. Defer to post-go-live
- D. Rebuild them manually in production

Answer: D

Explanation:

In a Bluefield deployment scenario, SAP Ariba requires that all Flex Master Data (FMD) templates and their associated data be present in the Production environment before migrating related configuration elements. If you find missing FMD templates during migration, the recommended approach is to manually recreate the missing templates in Production and load the relevant data. This is essential to maintain integrity because many custom fields depend on these templates, and missing templates can cause migration failures or broken references. Deferring or ignoring the issue risks operational disruptions and data inconsistencies. Reporting workarounds do not address template dependencies and therefore are ineffective. This aligns with SAP's guidance on master data migration within Bluefield scenarios to ensure successful, error-free deployments.

NEW QUESTION # 46

.....

The SAP C_ACDET_2506 web-based practice exam software can be easily accessed through browsers like Safari, Google Chrome, and Firefox.
