Salesforce Certified Platform Foundations Sample Questions (Q43-Q48):

NEW QUESTION # 43

What is one aspect of multi-tenant architecture?

- A. Costs more than single-tenant architecture
- B. Reserves resources per tenant
- C. Shares resources with other tenants

Answer: C

Explanation:

Salesforce operates on a multi-tenant architecture, where a single instance of the platform serves multiple customers (tenants). Each tenant's data is securely isolated, but they share common resources, such as server space, database instances, and updates. This approach ensures cost efficiency and scalability.

* A. Costs more than single-tenant architecture: Multi-tenancy reduces costs due to shared resources.

* B. Reserves resources per tenant: Resources are shared rather than reserved individually.

* Multi-Tenant vs. Single-Tenant

NEW QUESTION # 44

A Salesforce associate wants to quickly create an org where they can learn, practice, and develop Salesforce skills.

Which type of org should they create from within Trailhead?

- A. Playground
- B. Sandbox
- C. Developer Edition

Answer: C

Explanation:

The type of org that the associate should create from within Trailhead to quickly learn, practice, and develop Salesforce skills is a Playground. A Playground is a free, fully functional Salesforce org that you can use to test and explore the platform. You can create multiple Playgrounds from Trailhead and use them to complete hands-on challenges and projects. A Developer Edition is a type of org that you can create from the Salesforce website, not from Trailhead. A Sandbox is a type of org that you can create from a production org as a copy of it for testing and development purposes.

NEW QUESTION # 45

Get Cloudy Consulting wants to confirm the data type of the Account Sources field on Account object. Which editing the Account, the Account Sources field has several predefined values that can be selected.

Which type of field is Account Source?

- A. Text Area
- B. Formula
- C. Picklist

Answer: C

Explanation:

The Account Source field is a picklist type of field. A picklist field is a type of field that allows the user to select a value from a predefined list of values, which ensures data consistency and accuracy. For example, the Account Source field could have values such as Web, Phone, Referral, and so on. A formula field is a type of field that calculates a value based on an expression or formula, which can reference other fields, functions, or constants. For example, a formula field could calculate the commission amount based on the opportunity amount and the commission rate. A text area field is a type of field that allows the user to enter up to 255 characters of free-form text, which can include multiple lines and spaces. For example, a text area field could capture the description or notes of an account or an opportunity.

NEW QUESTION # 46

A VP of sales is requesting an easy-to-understand visual representation of accounts and opportunities that have been worked on by the sales agents in the current quarter in order to identify trends, sort data, and measure the impact of their activities.

What is recommended to meet these requirements?

- A. Create a list views.
- B. Create a custom tab.
- **C. Create a dashboard.**

Answer: C

Explanation:

Creating a dashboard is the recommended way to meet the requirements of displaying an easy-to-understand visual representation of accounts and opportunities that have been worked on by the sales agents in the current quarter. A dashboard is a collection of components that display data from one or more reports in a graphical format, such as charts, gauges, metrics, and tables. A dashboard allows the user to identify trends, sort data, and measure the impact of their activities. For example, a dashboard could show the number of accounts and opportunities by sales agent, the total amount of closed won opportunities by month, and the average deal size by industry. Creating a list view would not work, because a list view is a filtered set of records that display data in a tabular format, not a graphical format. A list view does not allow the user to identify trends, sort data, or measure the impact of their activities. Creating a custom tab would not work, because a custom tab is a user interface element that allows the user to access a custom object, a web page, or a Lightning page. A custom tab does not display data in a graphical format, but in a record detail or page layout format.

NEW QUESTION # 47

Get Cloudy Consulting (GCC) wants to migrate to Salesforce as its business continues to grow. GCC's needs include: Communicating available products and services to its prospective customers Improving its sales pipeline forecast and management quarterly revenue goals Offering support to customers through its website, consider for implementation?
