

Real JN0-105 Exams & Test JN0-105 Passing Score

P.S. Free & New JN0-105 dumps are available on Google Drive shared by Pass4sureCert: https://drive.google.com/open?id=1nvr5toD2IDW3f6f6q_ySgEbyvWswS3T

Every working person knows that JN0-105 is a dominant figure in the field and also helpful for their career. If JN0-105 reliable exam bootcamp helps you pass exams and get a qualification certificate you will obtain a better career even a better life. Our study JN0-105 Guide materials cover most of latest real JN0-105 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career, so why not try our product?

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 2	<ul style="list-style-type: none">Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 3	<ul style="list-style-type: none">Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.
Topic 4	<ul style="list-style-type: none">Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 5	<ul style="list-style-type: none">Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 6	<ul style="list-style-type: none">Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Easiest and Quick Way to Crack Juniper JN0-105 Exam

You can download Pass4sureCert Juniper JN0-105 PDF dumps file on your desktop computer, laptop, tab, or even on your smartphone. Just download the JN0-105 PDF questions file after paying affordable Prepare for your Junos, Associate (JNCIA-Junos) (JN0-105) exam questions charges and start Junos, Associate (JNCIA-Junos) (JN0-105) exam preparation anytime and anywhere.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which two statements are correct about a Routing Engine? (Choose two.)

- A. It processes management traffic.
- B. It processes CoS marked traffic.
- C. It forwards transit traffic.
- D. It maintains routing tables.

Answer: A,D

Explanation:

The Routing Engine (RE) in Juniper Networks devices plays a pivotal role in the control plane, handling tasks that are critical for the operation and management of the network. One of its key functions is processing management traffic, which includes user commands, system configuration, and monitoring operations. The RE also maintains routing tables, which are essential for network routing decisions. These tables contain network topology information and routing paths, which the RE uses to update the Packet Forwarding Engine (PFE) so that it can forward packets appropriately. The RE does not forward transit traffic or process Class of Service (CoS) marked traffic, as these tasks are handled by the PFE.

NEW QUESTION # 17

When considering routing tables and forwarding tables, which two statements are correct? (Choose two.)

- A. The forwarding table stores all routes and prefixes from all protocols.
- B. The routing table is used by the RE to select the best route.
- C. The routing table stores all routes and prefixes from all protocols.
- D. The forwarding table is used by the RE to select the best route.

Answer: B,C

Explanation:

The routing table and forwarding table play distinct roles in a Junos OS device. The correct answers are A and D. The routing table (A) is used by the Routing Engine (RE) to select the best route among all the learned routes, while the routing table (D) stores all routes and prefixes learned from all routing protocols. The forwarding table, in contrast, contains only the active routes chosen by the RE and is used by the Packet Forwarding Engine for actual packet forwarding.

NEW QUESTION # 18

Which two statements are correct about Junos traceoptions? (Choose two.)

- A. Traceoptions are enabled through configuration.
- B. Traceoption output, by default, is stored in /var/log/<file-name>.
- C. Traceoptions cannot be enabled in a production environment.
- D. Traceoptions are enabled by default.

Answer: A,B

Explanation:

Traceoptions in Junos OS are used for detailed debugging and troubleshooting of protocols and processes within the system. They are not enabled by default due to the potential performance impact and volume of data generated. Instead, traceoptions are enabled through specific configuration settings under the relevant protocol or process hierarchy. This allows administrators to target their troubleshooting efforts and control the scope of logging. By default, the output generated by traceoptions is stored in files located in the /var/log directory, with the file name typically specified in the traceoptions configuration. This structured approach to logging and debugging helps in diagnosing complex issues without overwhelming the system or the administrator with irrelevant data.

NEW QUESTION # 19

What are two functions of the routing protocol daemon (rpd)? (Choose two.)

- A. It generates chassis alarms.
- B. It maintains routing tables.
- C. It provides access to the CLI.
- D. It creates forwarding tables.

Answer: B,D

Explanation:

The Routing Protocol Daemon (rpd) is a critical component in Juniper Networks devices, responsible for all routing operations. It maintains routing tables, which hold information about network paths and destinations derived from various routing protocols. These tables are used to make decisions about where to send packets. Additionally, rpd generates forwarding tables based on the information in the routing tables. The forwarding tables are then used by the Packet Forwarding Engine (PFE) to actually forward packets to their next hop or final destination.

NEW QUESTION # 20

An administrator configures a router's interface with an IPv4 address and subnet mask. The administrator also confirms that this interface is in an up state.

In this scenario, which two route types are created on the local router? (Choose two.)

- A. a direct route
- B. a dynamic route
- C. a local route
- D. a static route

Answer: A,C

Explanation:

When an interface on a router is configured with an IPv4 address and is in an up state, two types of routes are automatically created in the routing table: a local route and a direct route, making B and D the correct answers.

The local route represents the interface's IP address itself, indicating that the router can directly receive packets addressed to this IP. The direct route represents the subnet or network segment to which the interface is connected, indicating that the router can directly forward packets to destinations within this subnet.

NEW QUESTION # 21

.....

You can easily operate this type of practicing test on iOS, Windows, Android, and Linux. And the most convenient thing about this type of JN0-105 practice exam is that you don't have to install any software as it is a JN0-105 web-based practice exam.

Pass4sureCert also has a product support team available every time to help you out in any terms.
