

# **Analytics-Admn-201 Valid Exam Syllabus & Valid Analytics-Admn-201 Exam Experience**

P.S. Free & New Analytics-Admn-201 dumps are available on Google Drive shared by TestPassKing: <https://drive.google.com/open?id=1KRTvtSTsSulzy9XIlj-zi93YuffEvktd>

If you are preparing for the Salesforce Analytics-Admn-201 exam dumps our Analytics-Admn-201 Questions help you to get high scores in your Salesforce Analytics-Admn-201 exam. Test your knowledge of the Salesforce Analytics-Admn-201 Exam Dumps with TestPassKing Salesforce Analytics-Admn-201 practice questions. The software is designed to help with Salesforce Analytics-Admn-201 exam dumps preparation.

## **Salesforce Analytics-Admn-201 Exam Syllabus Topics:**

<b>Topic</b>	<b>Details</b>
Topic 1	<ul style="list-style-type: none"><li>• Migration &amp; Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Connecting to and Preparing Data:</b> This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>

## Valid Salesforce Analytics-Admn-201 Exam Experience, Analytics-Admn-201 Certification Training

To further strengthen your preparation for the Salesforce Analytics-Admn-201 exam, TestPassKing provides an online Salesforce Practice Test engine. With this interactive tool, you can practice the Analytics-Admn-201 Exam questions in a simulated exam environment. The Analytics-Admn-201 online practice test engine is designed based on the real Salesforce Analytics-Admn-201 Exam patterns, allowing you to familiarize yourself with the format and gain confidence for the actual Salesforce Analytics-Admn-201 exam. Practicing with the Salesforce Analytics-Admn-201 exam questions will not only increase your understanding but also boost your overall performance.

## Salesforce Certified Tableau Server Administrator Sample Questions (Q17-Q22):

### NEW QUESTION # 17

What process enables you to access Tableau Services Manager (TSM) over HTTPS?

- A. License Manager
- B. Coordination Service
- **C. Administration Controller**
- D. Administration Agent

**Answer: C**

Explanation:

TSM is Tableau Server's management layer, accessible via CLI or web UI (port 8850). HTTPS secures this access-let's identify the responsible process:

\* TSM Architecture:

\* Administration Controller: Core TSM process, running on the initial node, handling configuration, UI, and CLI commands.

\* HTTPS: Enabled by default on port 8850 with a self-signed certificate (configurable to custom certs).

\* Option B (Administration Controller): Correct.

\* Details: Hosts the TSM web UI (<https://<server>:8850>) and processes CLI requests. It manages the HTTPS listener, serving the interface securely.

\* Why: It's the central hub for TSM operations, including secure access.

\* Option A (License Manager): Incorrect.

- \* Why: Validates licenses, not responsible for HTTPS or UI access.
  - \* Option C (Administration Agent): Incorrect.
  - \* Why: Runs on additional nodes in multi-node setups to relay commands to the Controller-no direct HTTPS role.
  - \* Option D (Coordination Service): Incorrect.
  - \* Why: ZooKeeper manages cluster state, not TSM's web interface or HTTPS.
- Why This Matters: Secure TSM access protects server administration-Administration Controller is the linchpin.  
 Reference: Tableau Server Documentation - "TSM Overview" ([https://help.tableau.com/current/server/en-us/tsm\\_overview.htm](https://help.tableau.com/current/server/en-us/tsm_overview.htm)).

### NEW QUESTION # 18

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- A. Set Execution to Parallel
- B. Set Default priority to 0
- C. Set Execution to Serial
- D. Set Frequency to Hourly

**Answer: C**

Explanation:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Backgrounder process:

- \* Parallel: Tasks run simultaneously (up to the Backgrounder's capacity), which is the default setting.
- \* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial. This is done in the Tableau Server web interface:

- \* Go to Schedules.
- \* Select the schedule, click Actions > Edit Schedule.
- \* Under Execution, choose Serial instead of Parallel.
- \* Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.
- \* Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).
- \* Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.
- \* Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.

Reference: Tableau Server Documentation - "Create or Modify a Schedule" ([https://help.tableau.com/current/server/en-us/schedule\\_manage\\_create.htm](https://help.tableau.com/current/server/en-us/schedule_manage_create.htm)).

### NEW QUESTION # 19

You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Examine the Tableau Server Status page
- B. Run the command `tsm status -v`
- C. Run the command `tsm maintenance ziplogs`
- D. Examine the Tableau Services Manager (TSM) web client Status page

**Answer: B**

Explanation:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:

- \* Coordination Service:
- \* Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.
- \* Status indicates if it's running and synced-critical for cluster health.
- \* Option C (Run `tsm status -v`): Correct.
- \* Details: `tsm status --verbose` lists all processes across nodes, including Coordination Service (e.g., "Coordination Service: RUNNING").

- \* Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node 2: RUNNING."
- \* Use: Run on the initial node; -v ensures full output.
- \* Option A (TSM web client Status page): Incorrect.
- \* Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node status-less granular than CLI.
- \* Option B (tsm maintenance ziplogs): Incorrect.
- \* Why: Generates log archives for troubleshooting, not a real-time status check.
- \* Option D (Tableau Server Status page): Incorrect.
- \* Why: The Server Status page (Server > Status in the web UI) monitors application processes (e.g., VizQL), not TSM's Coordination Service.

Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.  
 Reference: Tableau Server Documentation - "Check Server Status" ([https://help.tableau.com/current/server/en-us/tsm\\_status.htm](https://help.tableau.com/current/server/en-us/tsm_status.htm)).

## NEW QUESTION # 20

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Disable the option using the server Settings page
- **B. Disable the option using the site Settings page**
- C. Use the command: tsm configuration set -k recommendations.enabled -v false
- D. Publish data sources only to projects with permissions locked to the project

**Answer: B**

Explanation:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

## NEW QUESTION # 21

Which two commands are valid and complete commands? (Choose two.)

- **A. tsm maintenance ziplogs**
- **B. tsm maintenance cleanup**
- C. tsm maintenance restore
- D. tsm maintenance backup

**Answer: A,B**

Explanation:

TSM commands manage Tableau Server maintenance-let's validate their syntax:

\* Command Requirements:

\* Some need arguments (e.g., file paths); others are standalone.

\* Valid and Complete: Must work as-is without errors.

\* Option C (tsm maintenance cleanup): Correct.

\* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).

\* Use: tsm maintenance cleanup-runs fully.

\* Option D (tsm maintenance ziplogs): Correct.

\* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
