

NCP-CI-Azure Test Study Guide, Latest NCP-CI-Azure Mock Test

P.S. Free 2026 Nutanix NCP-CI-Azure dumps are available on Google Drive shared by TestsDumps:
<https://drive.google.com/open?id=1yH9LKWJHKSHQaFUUryIpliYj9GOnfChg>

As the saying goes, knowledge has no limits. You may be old but the spirit of endless learning won't be old. If you attend the test of NCP-CI-Azure certification you will update your stocks of knowledge and improve your actual abilities, buying our NCP-CI-Azure exam practice materials can help you pass the test smoothly. There are no threshold limits to attend the NCP-CI-Azure test such as the age, sexuality, education background and your job conditions, and anybody who wishes to improve their volume of knowledge and actual abilities can attend the NCP-CI-Azure test.

Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details
Topic 1	Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.
Topic 2	Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.
Topic 3	Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.
Topic 4	Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.

Latest NCP-CI-Azure Mock Test | NCP-CI-Azure Practice Exam Pdf

Usually, the recommended sources of studies for certification exams are boring and lengthy. It makes the candidate feel uneasy and they fail to prepare themselves for NCP-CI-Azure exam. Contrary to this, TestsDumps dumps are interactive, enlightening and easy to grasp within a very short span of time. You can check the quality of these unique exam dumps by downloading Free NCP-CI-

Azure Dumps from TestsDumps before actually purchasing.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q81-Q86):

NEW QUESTION # 81

An administrator is trying to determine which type of DNS server to deploy for a networking infrastructure in Azure. Which DNS server option would require either VPN or ExpressRoute connectivity?

- A. Azure
- **B. On-premises**
- C. Google
- D. Cloudflare

Answer: B

Explanation:

* DNS Server Options:

* Cloudflare: A public DNS service that operates over the internet.

* Azure: Azure DNS operates within the Azure cloud and does not require VPN or ExpressRoute for connectivity within Azure.

* On-premises: Requires a secure connection, such as VPN or ExpressRoute, to be accessible from Azure, as it resides outside the Azure cloud.

* Google: Another public DNS service accessible over the internet.

* Connectivity Requirements:

* On-premises DNS: To integrate on-premises DNS with Azure, secure connectivity (VPN or ExpressRoute) is necessary to ensure seamless and secure communication between the on-premises infrastructure and Azure resources.

* Conclusion: An on-premises DNS server would require VPN or ExpressRoute connectivity to be accessible and integrated with the Azure environment.

* VPN Gateway Configuration

* ExpressRoute Overview

NEW QUESTION # 82

An administrator has been tasked with scoping an NC2 on Azure deployment. One of the requirements is to ensure that the bare metal instance will support up to 20 TB of storage capacity.

Which bare metal instance should the administrator choose?

- A. ND96asr
- **B. AN36P**
- C. HB176rs
- D. AN36

Answer: B

Explanation:

* Storage Capacity Requirement: The requirement specifies that the bare metal instance must support up to 20 TB of storage capacity.

* Instance Selection: Among the provided options, the AN36P instance is designed to support higher storage capacities and performance needs.

* AN36P Capabilities: The AN36P instance is optimized for storage-intensive applications and provides the necessary hardware specifications to handle up to 20 TB of storage.

* Comparison with Other Instances:

* ND96asr: Typically optimized for GPU workloads rather than storage.

* AN36: May not meet the 20 TB storage requirement.

* HB176rs: Geared towards high-performance computing rather than large storage capacities.

* Conclusion: Based on the requirements and instance specifications, AN36P is the most suitable choice for supporting up to 20 TB of storage.

* Azure Virtual Machine Sizes

NEW QUESTION # 83

An administrator is tasked with preparing the company's Azure subscription for use with NCZ. Which two Azure Resource Providers need to be registered? (Choose two.)

- A. Microsoft.Network
- B. Microsoft.HybridCompute
- C. Microsoft.Nutanix
- D. Microsoft.HybridNetwork

Answer: A,C

Explanation:

* Azure Resource Providers: To prepare an Azure subscription for NC2, specific resource providers must be registered to enable necessary services and resources.

* Required Providers:

* Microsoft.Network: This provider is essential for networking functionalities, including virtual networks, subnets, and other network resources necessary for NC2 deployment.

* Microsoft.Nutanix: This provider is specifically required for integrating and managing Nutanix resources within the Azure environment.

* Other Providers:

* Microsoft.HybridNetwork and Microsoft.HybridCompute: These are not specifically required for NC2 but might be relevant for other hybrid or extended network configurations.

* Conclusion: Registering both "Microsoft.Network" and "Microsoft.Nutanix" ensures that all necessary network and Nutanix-specific resources are available for NC2 deployment.

NEW QUESTION # 84

An administrator is deploying an NC2 cluster in Azure and observes on NC2 console that nodes will not progress and continue in a Booting state.

What is the most likely cause for the node not continuing to deploy?

- A. The Azure account does not have an active subscription.
- B. The subscription has not been validated to be allowlisted by Microsoft.
- C. A private DNS server is being used that is not reachable.
- D. An Azure Support case must first be submitted for allowlisting the Azure subscription.

Answer: B

Explanation:

Azure Subscription Validation: When deploying an NC2 cluster, the Azure subscription must be validated and allowlisted by Microsoft. This is a crucial step to ensure that the necessary permissions and configurations are set up for the deployment.

Booting State Issue: If the nodes are stuck in the Booting state, it often indicates that the subscription has not been properly validated and allowlisted. This prevents the deployment from progressing as required resources and permissions are not fully accessible.

Checking Allowlisting Status: Administrators should verify that their subscription has been allowlisted by contacting Azure support or checking the status through the Azure portal.

Resolution: Once the subscription is validated and allowlisted by Microsoft, the deployment should proceed without the nodes getting stuck in the Booting state.

Azure Subscription Management

NEW QUESTION # 85

An organization wants to use existing Azure resources to deploy NC2.

What is a valid requirement to use existing Azure resources for this task?

- A. More than two DNS servers must be used.
- **B. The fastpathenabled tag must be added after creating a NAT gateway.**
- C. A new Azure resource group must be created where all resources, such as VNets must be created.
- D. Azure NAT gateway must be attached to the cluster management, Prism Central, and external Flow Gateway subnets.

Answer: B

Explanation:

Resource Group Requirement: When deploying NC2 on Azure, it is essential to organize resources such as VNets, subnets, and other components in a dedicated resource group. This helps in managing and maintaining the resources efficiently.

New Resource Group: Creating a new Azure resource group ensures that all the necessary NC2 resources are isolated and managed together, avoiding conflicts with existing resources and providing a clear separation for administration and billing purposes.

NEW QUESTION # 86

.....

Our NCP-CI-Azure learning guide are developed in three versions which are the PDF, Software and APP online versions. The PDF version of NCP-CI-Azure training materials is convenient for you to print, the software version can provide practice test for you and the online version of our NCP-CI-Azure Study Materials is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our NCP-CI-Azure free demo first to get a firsthand experience before you make any decision.
