

Managing-Cloud-Security Exam Pdf Vce & Managing-Cloud-Security Exam Training Materials & Managing-Cloud-Security Study Questions Free

WGU C838 MANAGING CLOUD SECURITY QUESTIONS WITH SOLUTIONS

Which phase of the cloud data life cycle allows both read and process functions to be performed?

- A Create
 - B Archive
 - C Store
 - D Share
- A

Which phase of the cloud data security life cycle typically occurs simultaneously with creation?

- A Share
 - B Store
 - C Use
 - D Destroy
- B

Which phase of the cloud data life cycle uses content delivery networks?

- A Destroy
 - B Archive
 - C Share
 - D Create
- C

P.S. Free 2026 WGU Managing-Cloud-Security dumps are available on Google Drive shared by ValidExam
<https://drive.google.com/open?id=1HgK2G2ZSwZNBT4hH2HraziHhg05vXIpR>

We will provide 24-hour online service for you on our Managing-Cloud-Security exam questions. If you can't decide what kind of Managing-Cloud-Security exam practice to choose, you shall have a chance to consult us, You can ask the questions that you want to know about our Managing-Cloud-Security Study Guide, we will listen to you carefully, according to your Managing-Cloud-Security exam, we guarantee to meet your requirements without wasting your purchasing funds.

The pass rate is 98.75% for Managing-Cloud-Security exam materials, and we can ensure you that you can pass the exam just one time if you choose us. Managing-Cloud-Security exam materials contain most of knowledge points for the exam, and you can master major knowledge points for the exam as well as improve your ability in the process of learning. Besides, Managing-Cloud-Security Exam Materials have free demo for you to have a try, so that you can know what the complete version is like. We have online and offline service, and if you have any questions for Managing-Cloud-Security training materials, you can consult us, and we will give you reply as soon as we can.

2026 Efficient Managing-Cloud-Security – 100% Free Exam Quiz | Valid Dumps WGU Managing Cloud Security (JY02) Pdf

Wrong topic tend to be complex and no regularity, and the Managing-Cloud-Security torrent prep can help the users to form a good logical structure of the wrong question, this database to each user in the simulation in the practice of all kinds of wrong topic all induction and collation, and the Managing-Cloud-Security study question then to the next step in-depth analysis of the wrong topic, allowing users in which exist in the knowledge module, tell users of our Managing-Cloud-Security Exam Question how to make up for their own knowledge loophole, summarizes the method to deal with such questions for, to prevent such mistakes from happening again.

WGU Managing Cloud Security (JY02) Sample Questions (Q150-Q155):

NEW QUESTION # 150

Under which jurisdiction do General Data Protection Regulation (GDPR) guidelines apply?

- A. United States of America
- B. China
- C. European Union
- D. Australia

Answer: C

Explanation:

The General Data Protection Regulation (GDPR) applies under the jurisdiction of the European Union.

Managing Cloud documentation explains that GDPR governs the collection, processing, storage, and transfer of personal data belonging to individuals within EU member states.

GDPR applies not only to organizations physically located in the European Union but also to organizations outside the EU that process or control EU residents' personal data. This broad scope makes GDPR one of the most influential data protection regulations affecting cloud services globally.

The regulation mandates strict requirements related to consent, data minimization, breach notification, and data subject rights.

Organizations using cloud services must ensure that their providers support GDPR compliance requirements.

The other jurisdictions listed have their own privacy regulations but are not governed by GDPR. Therefore, the correct jurisdiction is the European Union.

NEW QUESTION # 151

A customer requests that a cloud provider physically destroys any drives storing their personal data. What must the provider do with the drives?

- A. It should use degaussing tools to securely remove any personal data from the drives.
- B. It should destroy them only if the contract includes hardware disposal insurance.
- C. It should destroy them only if dedicated hardware disposal is specified in the contract.
- D. It should use cryptographic erasure to securely remove any personal data from the drives.

Answer: C

Explanation:

Cloud providers typically manage multi-tenant infrastructure, where physical hardware is shared among customers. Therefore, drives are not destroyed for each customer unless explicitly required in the contract. If the customer's agreement specifies dedicated hardware disposal, then the provider must comply by physically destroying the drives.

Cryptographic erasure and degaussing are valid sanitization methods, but they may not meet the specific contractual requirement of physical destruction. Insurance clauses are unrelated to disposal.

This question underscores the importance of negotiating contractual terms in cloud agreements. Customers handling highly sensitive or regulated data may require physical destruction, while others may accept logical erasure. Clear agreements ensure both compliance and alignment of security responsibilities.

NEW QUESTION # 152

Which risk is unique to the public cloud?

- A. Regulatory noncompliance
- B. Malware
- C. Vendor lock-in
- D. Personnel threats

Answer: C

Explanation:

Vendor lock-in is a risk most closely associated with the public cloud. Managing Cloud guidance explains that public cloud providers often use proprietary services, APIs, tools, and architectures that make migration to another provider difficult and costly. Organizations may heavily invest in provider-specific technologies, which can limit flexibility and increase dependency. If pricing models change, services are discontinued, or availability issues arise, customers may face significant challenges in exiting the provider's ecosystem.

While regulatory noncompliance, malware, and personnel threats exist in all environments, vendor lock-in is especially prominent in public cloud adoption due to its scale and proprietary service offerings. Therefore, vendor lock-in is the correct answer.

NEW QUESTION # 153

In which service model would the cloud service provider bear the greatest responsibility for security?

- A. Infrastructure as a Service (IaaS)
- B. Software as a Service (SaaS)
- C. Database as a Service (DBaaS)
- D. Platform as a Service (PaaS)

Answer: B

Explanation:

In the Software as a Service (SaaS) model, the cloud service provider bears the greatest responsibility for security. Managing Cloud documentation explains that in SaaS environments, the provider manages the application, operating system, middleware, infrastructure, and often many security controls.

Customers primarily focus on user access, data classification, and configuration of application-level settings, while the provider ensures platform availability, patching, vulnerability management, and infrastructure security. This shared responsibility model places the largest security burden on the provider in SaaS compared to other service models.

In PaaS and IaaS, customers assume increasing responsibility for securing operating systems, applications, and configurations. DBaaS still requires customer involvement in access control and data management.

Therefore, SaaS is the correct answer.

NEW QUESTION # 154

What should be done to data during the create phase of the data life cycle before being uploaded to the cloud?

- A. Share
- B. Archive
- C. Store
- D. Encrypt

Answer: D

Explanation:

During the create phase of the cloud data life cycle, data is first generated or collected by an organization. At this stage, it is essential to apply security controls before the data is transferred to the cloud environment.

The most effective control during this phase is encryption. Encrypting data ensures that the information is transformed into an unreadable format, protecting it from unauthorized access while it is being transmitted and stored in the cloud.

Managing Cloud principles emphasize that security must be applied as early as possible in the data life cycle to minimize exposure and reduce risk. If data is encrypted prior to upload, even if interception or unauthorized access occurs, the data remains protected and unusable without the appropriate decryption keys.

This approach also supports data confidentiality requirements and aligns with security best practices for handling sensitive and regulated information.

The other options do not provide adequate protection during the create phase. Storing or archiving data refers to later life cycle stages, while sharing data increases exposure rather than securing it. Therefore, encrypting data before uploading it to the cloud is a

critical safeguard that ensures data confidentiality, supports compliance requirements, and strengthens overall cloud security posture.

NEW QUESTION # 155

.....

No matter what kind of Managing-Cloud-Security learning materials you need, you can find the best one for you. Our expert team has spent a lot of time and energy just to provide you with the best quality Managing-Cloud-Security study guide. Managing-Cloud-Security Exam Materials will definitely make you feel value for money. Your exam results will help you prove this! And countless of the candidates have been benefited from our Managing-Cloud-Security practice braindumps.
