## Solutions Architect - Professional (SAP-C02) Practice Questions

In order to ensure that the examinees in the SAP-C02 exam certification make good achievements, our Exam4Docs has always been trying our best. With efforts for years, the passing rate of Exam4Docs's SAP-C02 certification exam has reached as high as 100%. After you purchase our SAP-C02 Exam Training materials, if there is any quality problem or you fail SAP-C02 exam certification, we promise to give a full refund unconditionally.

To prepare for the SAP-C02 exam, you can take various online courses and practice exams offered by AWS or third-party providers. You can also join online communities and forums to connect with other AWS professionals and learn from their experiences. Additionally, you should gain hands-on experience working with AWS solutions and technologies to reinforce your knowledge and skills. With the right preparation and dedication, you can earn the SAP-C02 Certification and take your career to the next level.

### Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q311-Q316):

#### NEW QUESTION # 311

A company is using AWS Control Tower to manage AWS accounts in an organization in AWS Organizations. The company has an OU that contains accounts. The company must prevent any new or existing Amazon EC2 instances in the OUs accounts from gaining a public IP address. Which solution will meet these requirements?

- A. Create an AWS Config custom rule that detects instances that have a public IP address. Configure a remediation action that uses an AWS Lambda function to detach the public IP addresses from the instances.
- **B. Create an SCP that prevents the launch of instances that have a public IP address. Additionally, configure the SCP to prevent the attachment of a public IP address to existing instances. Attach the SCP to the OU.**
- C. Implement the AWS Control Tower proactive control to check whether instances in the OU's accounts have a public IP address. Set the AssociatePublicIpAddress property to False. Attach the proactive control to the OU.
- D. Configure all instances in each account in the OU to use AWS Systems Manager. Use a Systems Manager Automation runbook to prevent public IP addresses from being attached to the instances.

**Answer: B**

Explanation:

Explanation

This option will meet the requirements of preventing any new or existing EC2 instances in the OU's accounts from gaining a public IP address. An SCP is a policy that you can attach to an OU or an account in AWS Organizations to define the maximum permissions for the entities in that OU or account. By creating an SCP that denies the ec2:RunInstances and ec2:AssociateAddress actions when the value of the aws:RequestTag/aws:PublicIp condition key is true, you can prevent any user or role in the OU from launching instances that have a public IP address or attaching a public IP address to existing instances. This will effectively enforce a security best practice and reduce the risk of unauthorized access to your EC2 instances.

#### NEW QUESTION # 312

A company is migrating to AWS and needs to inventory physical and virtual servers, apps, and database relationships to properly rightsize and plan migration.

- **A. Use Migration Hub with Discovery Agent and Strategy Recommendations.**
- B. Use Migration Evaluator with Agentless Collector.
- C. Use Migration Hub import tool.
- D. Use Migration Hub with Agentless Collector and Migration Service.

**Answer: A**

Explanation:

Migration Hub Discovery Agent collects deep host-level data, including processes, connections, dependencies, etc. Combined with Strategy Recommendations, it offers accurate insights for planning cloud migration.

Migration Hub Strategy Recommendations

### NEW QUESTION # 313

A company is using AWS Organizations to manage multiple accounts. Due to regulatory requirements, the company wants to restrict specific member accounts to certain AWS Regions, where they are permitted to deploy resources. The resources in the accounts must be tagged, enforced based on a group standard, and centrally managed with minimal configuration. What should a solutions architect do to meet these requirements?

- A. Create an AWS Config rule in the specific member accounts to limit Regions and apply a tag policy.
- **B. Associate the specific member accounts with a new OU. Apply a tag policy and an SCP using conditions to limit Regions.**
- C. From the AWS Billing and Cost Management console, in the master account, disable Regions for the specific member accounts and apply a tag policy on the root.
- D. Associate the specific member accounts with the root. Apply a tag policy and an SCP using conditions to limit Regions.

**Answer: B**

Explanation:

### NEW QUESTION # 314

A solutions architect needs to implement a client-side encryption mechanism for objects that will be stored in a new Amazon S3 bucket. The solutions architect created a CMK that is stored in AWS Key Management Service (AWS KMS) for this purpose. The solutions architect created the following IAM policy and attached it to an IAM role:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "DownloadUpload",
      "Action": [
        "s3:GetObject",
        "s3:GetObjectVersion",
        "s3:PutObject",
        "s3:PutObjectAcl"
      ],
      "Effect": "Allow",
      "Resource": "arn:aws:s3:::BucketName/*"
    },
    {
      "Sid": "KMSAccess",
      "Action": [
        "kms:Decrypt",
        "kms:Encrypt"
      ],
      "Effect": "Allow",
      "Resource": "arn:aws:kms:Region:Account:key/Key ID"
    }
  ]
}
```

During tests, the solutions architect was able to successfully get existing test objects in the S3 bucket. However, attempts to upload a new object resulted in an error message. The error message stated that the action was forbidden.

Which action must the solutions architect add to the IAM policy to meet all the requirements?

- **A. Kms:GenerateDataKey**
- B. kmsGetPubKKey
- C. KmsGetKeyPolicy
- D. kms:SKjn

**Answer: A**

Explanation:

<https://aws.amazon.com/premiumsupport/knowledge-center/s3-access-denied-error-kms/>

"An error occurred (AccessDenied) when calling the PutObject operation: Access Denied" This error message indicates that your IAM user or role needs permission for the kms:GenerateDataKey action.

### NEW QUESTION # 315

A solutions architect needs to implement a client-side encryption mechanism for objects that will be stored in a new Amazon S3 bucket. The solutions architect created a CMK that is stored in AWS Key Management Service (AWS KMS) for this purpose. The solutions architect created the following IAM policy and attached it to an IAM role:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "DownloadUpload",
      "Action": [
        "s3:GetObject",
        "s3:GetObjectVersion",
        "s3:PutObject",
        "s3:PutObjectAcl"
      ],
      "Effect": "Allow",
      "Resource": "arn:aws:s3:::bucketName/*"
    },
    {
      "Sid": "KMSAccess",
      "Action": [
        "kms:Decrypt",
        "kms:Encrypt"
      ],
      "Effect": "Allow",
      "Resource": "arn:aws:kms:Region:Account:key/Key ID"
    }
  ]
}
```

During tests, the solutions architect was able to successfully get existing test objects in the S3 bucket. However, attempts to upload a new object resulted in an error message. The error message stated that the action was forbidden.

Which action must the solutions architect add to the IAM policy to meet all the requirements?

- A. kms:GenerateDataKey
- B. kms:GetPubKey
- C. kms:GetKeyPolicy
- D. kms:SKJn

Answer: A
