# 3V0-24.25 Learning Materials & 3V0-24.25 Exam Simulation & 3V0-24.25 Test Dumps

The customer is God. 3V0-24.25 learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of download and installation. During your studies, 3V0-24.25 study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our 3V0-24.25 Study Tool. At the same time, 3V0-24.25 test question will also generate a report based on your practice performance to make you aware of the deficiencies in your learning process and help you develop a follow-up study plan so that you can use the limited energy where you need it most. So with 3V0-24.25 study tool you can easily pass the exam.

By adhering to the principle of "quality first, customer foremost", and "mutual development and benefit", our company will provide first class service for our customers. As a worldwide leader in offering the best 3V0-24.25 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in 3V0-24.25 Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our 3V0-24.25 exam questions. Any time is available; our responsible staff will be pleased to answer your question whenever and wherever you are.

>> New 3V0-24.25 Study Plan <<

100% Pass 2026 Authoritative 3V0-24.25: New Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Study Plan

Our web-based practice exam software is an online version of the 3V0-24.25 practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the certification exam on the first attempt, our web-based VMware 3V0-24.25 Practice Test software is your best option. You will go through Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service mock exams and will see for yourself the difference in your preparation.

VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q90-Q95):

NEW QUESTION # 90
A VI Administrator is managing the lifecycle of VM images used by the VM Service. A new corporate standard requires that all Linux VMs deployed via kubectl must use the hardened image corp-linux- v2.ova.
The administrator has uploaded the new OVA to the Corporate-Images Content Library.
How can the administrator ensure that developers can immediately begin deploying VMs using this new image name in their YAML? (Select all that apply.)

- A. Ensure the Corporate-Images Content Library is assigned to the developers' vSphere Namespace.
- B. The VM Service automatically syncs and discovers new images in assigned libraries; the developers can reference corp-linux-v2 in the spec.imageName field once the sync completes.
- C. The developers must change the kind in their YAML to VirtualMachineImage.

- D. The administrator must manually restart the wcp-vmop-controller pod on the Supervisor to recognize the new image.
- E. The administrator must create a "VM Image" custom resource object in Kubernetes mapping the OVA UUID to a name.

Answer: A,B

NEW QUESTION # 91

A Platform Engineer is designing a Supervisor architecture for a critical production environment that requires resilience against the failure of an entire Availability Zone (AZ). The environment consists of three vSphere Zones: Zone-1, Zone-2, and Zone-3.
Review the following proposed configuration for the Supervisor deployment:
Proposed Supervisor Config
Name: Prod-Supervisor
Zones:
- Zone-1
- Zone-2
Control Plane Size: Medium
Network: vDS with NSX Advanced Load Balancer
Storage: vSAN Stretched Cluster
Why will this configuration fail to meet the requirement of tolerating a full zone failure while maintaining full control plane functionality? (Select all that apply.)

- A. The Supervisor must be deployed in a single zone and rely on vSphere HA to restart VMs in the other zones.
- B. The vSAN Stretched Cluster provides storage resilience, but the Supervisor Control Plane VMs must be anti-affined across three distinct fault domains to ensure one remains available and quorum is held.
- C. The "Medium" Control Plane size does not support multi-zone availability; "Large" is required.
- D. A Supervisor deployed across only two zones (Zone-1 and Zone-2) cannot maintain a quorum (etcd) if one of those zones fails; a minimum of three zones is required for a Zonal Supervisor to survive a zone failure.
- E. vDS networking does not support multi-zone Supervisor deployments; NSX-T Data Center is a strict requirement for Zonal Supervisors.

Answer: B,D

NEW QUESTION # 92

In the context of vSphere with Tanzu architecture using NSX networking, what is the primary function of the SNAT (Source Network Address Translation) rule configured for a vSphere Namespace?

- A. It provides a static, dedicated public IP address for every individual Pod in the namespace to be reachable from the internet (1:1 NAT).
- B. It maps the internal IP addresses of Pods and TKG cluster nodes within the namespace to a routable IP from the Egress IP CIDR, allowing them to initiate outbound connections to external networks.
- C. It encrypts traffic leaving the namespace to ensure secure communication between different vSphere Zones.
- D. It balances incoming traffic from the external network across multiple replicas of a Kubernetes Service (Load Balancing).

Answer: B

NEW QUESTION # 93

A VI Administrator is planning to upgrade a Supervisor Cluster. The pre-check validation fails with an error indicating insufficient resources.
Review the current resource usage of the Supervisor Control Plane (3 VMs):
Control Plane Size: Small
Total CPU Reservation: 6000 MHz (2000 MHz per VM)
Total Memory Reservation: 24 GB (8 GB per VM)
Resource Pool 'Namespaces' Capacity:
CPU: 7000 MHz
Memory: 26 GB
The upgrade process requires deploying a fourth Control Plane VM temporarily to perform the rolling update.
What is the most likely cause of the pre-check failure?

- A. The storage datastore is full.
- B. The Management Network IP pool is exhausted.
- C. The ESXi hosts are in maintenance mode.
- D. The 'Namespaces' Resource Pool does not have enough unreserved CPU and Memory capacity to power on the fourth (surge) Control Plane VM required for the rolling upgrade.

Answer: D

NEW QUESTION # 94

A Cloud Administrator initiates a Supervisor upgrade. The process hangs at 55% for an extended period.

The administrator checks the vCenter events and sees:

Event: Supervisor Upgrade Stalled

Detail: Waiting for Control Plane VM 'Supervisor-Control-Plane-VM-02' to power on.

Error: The operation failed due to a file lock on the datastore '[vsanDatastore]'.

Further investigation reveals that a backup job from a third-party tool is currently running on the old Control Plane VMs, holding a lock on the VM files.

What is the correct remediation to allow the upgrade to proceed? (Choose 2.)

- A. The upgrade process will automatically retry once the locks are released; no manual intervention is strictly required if the backup finishes within the timeout window, but cancelling is the immediate fix.
- B. Manually delete the 'Supervisor-Control-Plane-VM-02' from disk.
- C. Restart the vCenter Server service.
- D. Migrate the Supervisor to a different datastore during the upgrade.
- E. Cancel the backup job to release the file locks.

Answer: A,E

NEW QUESTION # 95
