- B. GlideSystem and current
- C. GlideRecord and current
- D. GlideUser and GlideRecord

Answer: A

Explanation:
https://developer.servicenow.com/dev.do#!/learn/learning-plans/quebec/servicenow_administrator/app_store_learnv2_automatingapps_quebec_scheduled_script_execution_scripts

NEW QUESTION # 168
What feature allows you to limit who is able to contribute or read knowledge within a knowledge base?

- **A. User Criteria**
- B. Roles
- C. Groups
- D. Categories

Answer: A

NEW QUESTION # 169
In an Email Notification, which one of the following is NOT true for the Weight field?

- A. The Weight value defaults to zero
- B. Only Notifications with the highest weight for the same record and recipients are sent
- C. A Weight value of zero means the Notification is always sent when the Notification's When to send criteria is met
- **D. A Weight value of zero means that no email should be sent**

Answer: D

NEW QUESTION # 170
Which one of the following is true for a Script Include with a Protection Policy value of Protected?

- A. The Protection policy option can only be enabled by a user with the admin role
- B. Any user with the protected_edit role can see and edit the Script Include
- **C. The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store**
- D. The Protection Policy is applied only if the glide.app.apply_protection system property value is true

Answer: C

Explanation:
https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ScriptProtectionPolicy.html
The following is true for a Script Include with a Protection Policy value of Protected:
The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store. This is true because the Protection Policy is a feature that allows developers to protect their Script Includes from being viewed or modified by other users when they distribute their applications through the ServiceNow App Store. The Protection Policy is only enforced when the

application is installed from the App Store, not when it is developed or tested on the instance.
The following are not true for a Script Include with a Protection Policy value of Protected:
Any user with the protected_edit role can see and edit the Script Include. This is false because the protected_edit role is not related to the Protection Policy, but to the Access Control (ACL) rules. The protected_edit role allows users to edit protected fields on a table, such as the script field on the sys_script table, which stores the Business Rules. The Protection Policy does not use roles to control access to the Script Includes, but a cryptographic key that is generated when the application is published to the App Store. The Protection policy option can only be enabled by a user with the admin role. This is false because the Protection policy option can be enabled by any user who has the application_admin role for the scoped application that contains the Script Include. The application_admin role grants full access to the application development and administration within the scope of the application. The Protection Policy is applied only if the glide.app.apply_protection system property value is true. This is false because the glide.app.apply_protection system property is not related to the Protection Policy, but to the Application Restricted Caller Access (ARCA) feature. The ARCA feature allows developers to restrict the access to the Script Includes from other applications based on the caller's scope. The glide.app.apply_protection system property determines whether the ARCA feature is enabled or disabled on the instance. References: Script Includes, Protect Script Includes, Application Restricted Caller Access

NEW QUESTION # 171
Which of the following steps can be used to import new data into ServiceNow from a spreadsheet?

- A. Select Data Source, Schedule Transform
- B. Select Import Set, Select Transform Map, Run Transform
- C. Define Data Source, Select Transform Map, Run Transform
- D. Load Data, Create Transform Map, Run Transform Most Voted

Answer: D

Explanation:
The steps to import new data into ServiceNow from a spreadsheet are: Load Data, Create Transform Map, Run Transform. Load Data is the process of uploading the spreadsheet file and creating an Import Set table that contains the data to be imported. Create Transform Map is the process of defining how the fields from the Import Set table map to the fields of the target table in ServiceNow. Run Transform is the process of executing the Transform Map and copying the data from the Import Set table to the target table. Reference: Import sets, Transform maps

NEW QUESTION # 172
......

The ServiceNow CAD practice tests on this software will allow you to self-assess your progress. It also allows you to schedule your ServiceNow CAD practice exam.
