Salesforce Certified B2C Commerce Architect Sample Questions (Q17-Q22):

NEW QUESTION # 17
The Client is Crowing and decided to migrate its ecommerce website to B2C Commerce. The Client provided the Architect with the f metrics for its existing website over the past 12 months and forecasted into the next year:
Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new

B2C Commerce site?

- A. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- B. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour
- C. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour
- D. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour

Answer: D

NEW QUESTION # 18

Given the above OCAPI definitions, which permission or permissions apply?

- A. Allows external applications to create coupons
- B. Allow external applications to create, update, and delete both coupons and coupon codes
- C. Allows external applications to update coupons
- D. Allows external applications to create, update, and delete coupons

Answer: C

NEW QUESTION # 19

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

How does this code sample accomplish authentication to the service provider?

- A. By wrapping the authentication service call with Basic Auth.
- B. By performing a signed SOAP Auth request using a certificate.
- C. By disabling Basic Auth and executing the service authentication call.
- D. By Issuing a Basic Auth request to the service provider.

Answer: C

Explanation:
The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line svc.setAuthentication("NONE");. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

NEW QUESTION # 20

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Warning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:
* The messaging on Product Detail page is different
* Customers are able to filler their Product Search Results
The customer's operations team asks about the format in which to send this value in the catalog.
Which data type should the Architect specify for this attribute In the Data Mapping document?

- A. A custom attribute type set-of-string containing multiple values.
- B. A custom attribute of type enum-of-string (single selectable value)
- C. A custom attribute of type string containing comma separated values.
- D. A custom attribute of type enum-of-string (multiselect able value).

Answer: B

Explanation:
For the shoe producer implementing Salesforce B2C Commerce, the attribute used to specify the type of shoes (boots, sandals, sneakers) should be set as a single selectable value, hence the use of an enum-of-string type. This data type allows for the selection of one option from a predefined list, which is ideal for cases where each product can only be categorized into one type. This ensures

that data integrity is maintained while providing clear and distinct categorization that can easily be used for filtering on the Product Search Results page and for customized messaging on the Product Detail page.

NEW QUESTION # 21

A client has a single site with multiple domains, locales, and languages. Afterlaunch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale.
Which version of aliases,Json file below will accomplish this task?

- A. ▯
- B. ▯
- C. ▯
- D. ▯

Answer: A

Explanation:
Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.

NEW QUESTION # 22
