

Free Sample CT-AI Questions & New CT-AI Exam Format

BTW, DOWNLOAD part of SurePassExams CT-AI dumps from Cloud Storage: https://drive.google.com/open?id=1bVS0jnC8WqFQ_HOWc9AMegPCctN1C0BG

To be well-prepared, you require trustworthy and reliable SurePassExams practice material. You also require accurate SurePassExams study material to polish your capabilities and improve your chances of passing the CT-AI Certification Exam. SurePassExams facilitates your study with updated ISTQB CT-AI exam dumps.

The clients can download our CT-AI exam questions and use our them immediately after they pay successfully. Our system will send our CT-AI learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our CT-AI Guide materials. It is fast and convenient!

New ISTQB CT-AI Exam Format - Dumps CT-AI Cost

By adhering to the principle of “quality first, customer foremost”, and “mutual development and benefit”, our company will provide first class service for our customers. The exam prepare materials of SurePassExams is high quality and high pass rate, it is completed by our experts who have a good understanding of Real CT-AI Exam and have many years of experience writing study materials. They know very well what candidates really need most when they prepare for the CT-AI exam. They also understand the real exam situation very well. We will let you know what a real exam is like.

ISTQB Certified Tester AI Testing Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

Which of the following aspects is a challenge when handling test data for an AI-based system?

- A. Video frame speed or aspect ratio
- **B. Personal data or confidential data**
- C. Data frameworks or machine learning frameworks
- D. Output data or intermediate data

Answer: B

Explanation:

Handling test data in AI-based systems presents numerous challenges, particularly in terms of data privacy and confidentiality. AI models often require vast amounts of training data, some of which may contain personal, sensitive, or confidential information. Ensuring compliance with data protection laws (e.g., GDPR, CCPA) and implementing secure data-handling practices is a major challenge in AI testing.

* Data Privacy Regulations

- * AI-based systems frequently process personal data, such as images, names, and transaction details, leading to privacy concerns.
- * Compliance with regulations such as GDPR (General Data Protection Regulation) and CCPA (California Consumer Privacy Act) requires proper anonymization, encryption, or redaction of sensitive data before using it for testing.
- * Data Security Challenges
- * AI models may leak confidential information if proper security measures are not in place.
- * Protecting training and test data from unauthorized access is crucial to maintaining trust and compliance.
- * Legal and Ethical Considerations
- * Organizations must obtain legal approval before using certain datasets, especially those containing health records, financial data, or personally identifiable information (PII).
- * Testers may need to employ synthetic data or data masking techniques to minimize exposure risks.
- * (B) Output data or intermediate data#
- * While analyzing output data is important, it does not pose a significant challenge compared to handling personal or confidential test data.
- * (C) Video frame speed or aspect ratio#
- * These are technical challenges in processing AI models but do not fall under data privacy or ethical considerations.
- * (D) Data frameworks or machine learning frameworks#
- * Choosing an appropriate ML framework (e.g., TensorFlow, PyTorch) is important, but it is not a major challenge related to test data handling.
- * Handling personal or confidential data is a critical challenge in AI testing. Personal or otherwise confidential data may need special techniques for sanitization, encryption, or redaction. Legal approval for use may also be required." Why is Option A Correct? Why Other Options are Incorrect? References from ISTQB Certified Tester AI Testing Study Guide Thus, option A is the correct answer, as data privacy and confidentiality are major challenges when handling test data for AI-based systems.

NEW QUESTION # 41

Which of the following is one of the reasons for data mislabelling?

- A. Lack of domain knowledge
- B. Interoperability error
- C. Expert knowledge
- D. Small datasets

Answer: A

Explanation:

The syllabus lists multiple reasons for mislabelled data, including the lack of domain knowledge:

"Lack of required domain knowledge may lead to incorrect labelling."

(Reference: ISTQB CT-AI Syllabus v1.0, Section 4.5.2, page 38 of 99)

NEW QUESTION # 42

You are testing an autonomous vehicle which uses AI to determine proper driving actions and responses. You have evaluated the parameters and combinations to be tested and have determined that there are too many to test in the time allowed. It has been suggested that you use pairwise testing to limit the parameters. Given the complexity of the software under test, what is likely the outcome from using pairwise testing?

- A. While the number of tests needed can be reduced, there may still be a large enough set of tests that automation will be required to execute all of them
- B. All high priority defects will be identified using this method
- C. Pairwise cannot be applied to this problem because there is AI involved and the evolving values may result in unexpected results that cannot be verified
- D. The number of parameters to test can be reduced to less than a dozen

Answer: A

Explanation:

The syllabus states that while pairwise testing is effective at finding defects by reducing the number of test cases needed, the resulting test suite can still be extensive and require automation:

"Even the use of pairwise testing can result in extensive test suites... automation and virtual test environments often become necessary to allow the required tests to be run." (Reference: ISTQB CT-AI Syllabus v1.0, Section 9.2, Page 67 of 99)

NEW QUESTION # 43

There is a growing backlog of unresolved defects for your project. You know the developers have an ML model that they have created which has learned which developers work on which type of software and the speed with which they resolve issues. How could you use this model to help reduce the backlog and implement more efficient defect resolution?

- A. Use it to review the code and determine where more defects are likely to occur so that testing can be targeted to those areas
- B. Use it to prioritize defects automatically based on the time expected for the fix to be made, the speed of the fix, and the likelihood of regressions
- C. Use it to determine the root cause of each defect and develop a process improvement plan that can be implemented to remove the most common root causes
- D. Use it to assign defects to the best developer to resolve the problem and to load balance the defect assignments among the developers

Answer: D

Explanation:

The syllabus explains that ML models can be used to analyze reported defects and suggest which developers are best suited to fix them based on historical data about defect assignment and resolution speed:

"Assignment: ML models can suggest which developers are best suited to fix particular defects, based on the defect content and previous developer assignments." (Reference: ISTQB CT-AI Syllabus v1.0, Section 11.2, page 78 of 99)

NEW QUESTION # 44

Which ONE of the following options for a test basis would give the LEAST coverage when using AI-based test generation?

- A. A test model describing the application functionality
- B. A pseudo-oracle
- C. An XML schema
- D. A list of possible web pages that comprise the application

Answer: C

Explanation:

An XML schema would give the least coverage when using AI-based test generation. While it defines the structure of data (e.g., tags, elements), it does not provide detailed information about the application functionality or behavior, which are essential for generating meaningful tests for AI systems. The other options (test model, web pages list, and pseudo-oracle) provide more comprehensive insights into the system's behavior and logic, which are better suited for effective AI-based test generation.

NEW QUESTION # 45

.....

We have authoritative production team made up by thousands of experts helping you get hang of our CT-AI study question and enjoy the high quality study experience. We will update the content of CT-AI test guide from time to time according to recent changes of examination outline and current policies. Besides, our CT-AI Exam Questions can help you optimize your learning method by simplifying obscure concepts so that you can master better. One more to mention, with our CT-AI test guide, there is no doubt that you can cut down your preparing time in 20-30 hours of practice before you take the exam.
