EAEP2201인기자격증 시험 덤프자료 완벽한 시험대비 인증덤프

KoreaDumps는 몇년간 최고급 덤프품질로 IT인증덤프제공사이트중에서 손꼽히는 자리에 오게 되었습니다. Esri EAEP2201 덤프는 많은 덤프들중에서 구매하는 분이 많은 인기덤프입니다. Esri EAEP2201시험준비중이신 분이시라면Esri EAEP2201한번 믿고 시험에 도전해보세요. 좋은 성적으로 시험패스하여 자격증 취득할것입니다.

최신 Technical Certification EAEP2201 무료샘플문제 (Q28-Q33):

질문 # 28

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.
Which action should the administrator perform?

- A. Batch delete users with ArcPy
- B. Use command line utilities
- C. Delete users using the Member tab

정답: B

설명:

The most efficient and supported method for managing and removing multiple users after a Portal for ArcGIS upgrade is by using command line utilities, specifically the deleteusers utility included with Portal for ArcGIS. This tool allows administrators to batch delete user accounts by referencing a file that lists usernames. This method is especially useful when needing to quickly reduce the number of named users to comply with licensing restrictions.

Deleting users individually via the Member tab (Option B) is time-consuming and inefficient when dealing with large numbers of accounts. Using ArcPy (Option C) is not supported for managing Portal users in bulk.

질문 # 29

In an existing ArcGIS Enterprise deployment, the ArcGIS Data Interoperability extension must be licensed on one of the federated ArcGIS Server sites. The administrator has received the license file for the extension.

What should the administrator do?

- A. Use the ArcGIS Server installation program to apply the license
- B. Manually add the license to the JSON license file, and then reload it
- C. Use the Software Authorization Wizard to apply the license and then restart

정답: C

설명:

To license the ArcGIS Data Interoperability extension on a federated ArcGIS Server site, the administrator must use the Software Authorization Wizard. This is the officially supported and recommended method provided by Esri for authorizing additional extensions to ArcGIS Server.

According to the ArcGIS Enterprise Installation Guide and Esri's administration best practices:

* The Software Authorization Wizard is the tool used to input license information and authorize software features such as the Data Interoperability extension.

* This wizard can be launched after installation or from the ArcGIS Server program group at any time.

* Once the license is applied using the wizard, it is necessary to restart the ArcGIS Server services so that the newly authorized extension is loaded properly.

Option A is incorrect because Esri does not support manually modifying license JSON files. Doing so can corrupt the licensing configuration and is not documented or recommended.

Option C is incorrect because the ArcGIS Server installation program does not apply or manage licenses—it is used solely for installing the core server software.

Therefore, the correct method is to use the Software Authorization Wizard, apply the license file, and restart the ArcGIS Server service to activate the extension.

질문 # 30

An organization's portal license file provides for 30 Editor user type and 15 GIS Professional user type licenses. After performing a needs assessment, the GIS administrator discovers that the organization requires 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses.

When downloading a new license file, how many of each user type license should the administrator specify?

- A. 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses
- B. 40 Editor and 20 GIS Professional user type licenses
- C. 30 Viewer, 30 Editor, and 15 GIS Professional user type licenses
- D. 10 Viewer, 10 Editor, and 5 GIS Professional user type licenses

정답: A

설명:

When downloading a new license file from My Esri to accommodate the organization's user needs, administrators should request the exact quantities identified in the internal needs assessment:

* 10 Viewer

* 40 Editor

* 20 GIS Professional

These quantities will be used to generate the new license file, which reflects the actual number of entitlements needed. Esri licensing is flexible in this regard, and the administrator can request different counts per type within their entitlements.

From the ArcGIS Enterprise Licensing documentation:

"When generating a new license file for your deployment, you can specify the number of each user type and role needed. The license file will reflect these values, and must match the needs of your organization."

* OptionA provides insufficient licenses.

* OptionB omits the necessary Viewer licenses.

* OptionD reflects original entitlements, not the updated requirement.

질문 # 31

A GIS administrator works for the Department of Transportation. Users need to analyze decades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.

Which server must be configured to support this workflow?

- A. Notebook Server
- **B. GeoEvent Server**
- C. GeoAnalytics Server

정답: B

질문 # 32

A GIS administrator needs to change the ownership of a shared update group to a different user. The administrator receives an error message: "Unable to reassign the group at this time." What is causing this error?

- A. It is not possible to reassign ownership of shared update groups
- **B. The user does not have the correct privileges**
- C. The sharing settings on the group are configured incorrectly

정답: B

설명:

The error message "Unable to reassign the group at this time" typically occurs when attempting to transfer ownership of a shared update group to a user who lacks the necessary privileges. Specifically, the new owner must have the privilege to create and own groups. If the user's role does not include this privilege, the ownership transfer will fail. To resolve this, ensure that the user has a role (either default or custom) that includes the privilege to create groups.
