With the development of the electronic equipment, there are a lot of changes in the designs of our GICSP pass-sure torrent. The most impressive version is the APP online version. Normally, it can be used on all kinds of digital devices. But it also has the special advantage that the online version can be used when you are not online, As long as you use it for the first time in a networked environment, you can use the online version of our GICSP learning guide from anywhere without network connection. I believe the online version of our GICSP exam questions will be a good choice for you

## GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q61-Q66):

### NEW QUESTION # 61

What should be considered when implementing fieldbus protocols over an Ethernet network?

- A. Communications between machines are limited to one host at a time
- B. The network cannot be segmented into smaller subnets or VLANs
- C. Different protocols cannot route across the same infrastructure
- D. Different protocols will need a bridging device to talk to each other

**Answer: D**

Explanation:

Fieldbus protocols are industrial communication standards used at lower levels of ICS networks. When these protocols are implemented over Ethernet, several considerations arise:

Different fieldbus protocols (such as Modbus TCP, PROFINET, EtherNet/IP) have unique data formats and communication methods.

To enable communication between devices using different protocols, a bridging device or gateway (D) is typically required to translate between protocol types.

Other options are incorrect because:

(A) Ethernet allows multiple hosts to communicate simultaneously.

(B) Different protocols can coexist on the same physical infrastructure using VLANs or other segmentation.

(C) Networks can and should be segmented into VLANs for security and performance.

GICSP covers these considerations in the ICS Security Architecture domain emphasizing protocol interoperability and network design.

### NEW QUESTION # 62

In the context of ICS environments, what is the role of a wireless sensor network (WSN)?

Response:

- A. To control physical security systems
- B. To provide high-speed internet connectivity to devices
- C. To monitor and manage financial transactions
- **D. To collect and transmit environmental data such as temperature and pressure**

**Answer: D**

### NEW QUESTION # 63

Which level in the Purdue Reference Architecture is typically responsible for business planning and logistics?

Response:

- A. Level 2
- B. Level 3
- C. Level 1
- **D. Level 4**

**Answer: D**

### NEW QUESTION # 64

Which type of attack specifically targets wireless networks by overwhelming them with excessive traffic, causing a loss of availability?

Response:

- A. Man-in-the-middle (MitM) attack
- B. Cross-site scripting (XSS)
- **C. Denial-of-Service (DoS) attack**
- D. Phishing

**Answer: C**

### NEW QUESTION # 65

How is a WirelessHART enabled device authenticated?

- A. Using the vendor hard-coded master key to obtain a link key
- B. Using a PIN combined with the device MAC address
- C. Using a WPA2 pre-shared key entered by an administrator
- D. Using a join key to send an encrypted request for the shared network key

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

WirelessHART is a secure, industrial wireless protocol widely used in process control. Its security architecture uses a layered approach including encryption and authentication mechanisms to protect communications.

WirelessHART devices authenticate by first using a join key, which is a shared secret configured in both the device and the network manager. The device uses this join key to send an encrypted request to the network manager.

Upon successful authentication, the device receives the network key, which is used for encrypting ongoing communications within the network.

This method ensures that only authorized devices can join the network and participate in secure communications.

WPA2 (A) is a Wi-Fi standard, not used in WirelessHART; the vendor hard-coded master key (C) is discouraged due to security risks; and PIN plus MAC address (D) is not a WirelessHART authentication method.

This procedure is detailed in the GICSP's ICS Security Architecture domain, highlighting wireless device authentication protocols as per WirelessHART specifications.
