Salesforce Certified Platform App Builder certification is valid for three years, after which the individual needs to retake the exam to maintain their certification status.

Salesforce Certified Platform App Builder Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which two should be considered when creating unmanaged packages? (Choose two.)

- A. Distributing upgradeable components to other Salesforce orgs.
- B. Publishing an application for sale on the AppExchange.
- C. Deploying from a Developer Edition environment.
- D. Distributing open-source projects on the AppExchange.

Answer: A,C

NEW QUESTION # 61

Universal Containers has deployed custom tabs to Production via changes sets, without including the profile settings or permission sets.

What is the settings for the visibility of custom tabs?

- A. Custom tabs are hidden for all users.
- B. Custom tabs are default off for all users.
- C. Custom tabs are NOT deployed.
- D. Custom tabs are default on for all uses.

Answer: A

NEW QUESTION # 62

Cloud Kicks has three types of customer support processes: Platinum, Diamond, and Bronze. The app builder created separate record types for each process on the Case object. The customer support team should be unable to create new cases with the Bronze record type.

How should this requirement be met?

- A. Update the organization-wide defaults to private for Case.
- B. Make the record type hidden to support users; update sharing roles to private.
- C. Update the support team profile to remove the Bronze record type.
- D. Create permission set group for Case that includes Platinum and Diamond record types.

Answer: C

Explanation:

The solution that should meet this requirement is updating the support team profile to remove the Bronze record type. This way, the support team users will not be able to create new cases with the Bronze record type, as it will not appear in their record type selection list. Option A is incorrect because updating the organization-wide defaults to private for Case does not affect the record type availability, but rather the record access level. Option C is incorrect because creating permission set group for Case that includes Platinum and Diamond record types does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile. Option D is incorrect because making the record type hidden to support users and updating sharing roles to private does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile.

NEW QUESTION # 63

A recently refreshed partial sandbox at Cloud Kicks has no data In the custom object Shipping. Checking In production, there are two million rows of data in the object.

What could be the reason the data is missing?

- A. The Partial sandbox is at capacity.
- B. The selected objects in the sandbox template.
- C. The sandbox is still populating data.
- D. The sandbox was refreshed too early.

Answer: B

Explanation:

The selected objects in the sandbox template. This is correct because a partial sandbox only copies a subset of data from production, and the data to be copied is determined by the sandbox template. If the Shipping object was not selected in the template, then its data would not be copied to the sandbox

NEW QUESTION # 64

Universal Container wants customers to be able to open cases from a public-facing website.

What should the app builder use to enable visitors to the website?

- **A. Web-to-case**
- B. Screen flow
- C. Email-to-case
- D. Outbound message

Answer: A

Explanation:

Explanation

The app builder should use Web-to-Case to enable visitors to the website to open cases. Web-to-Case is a feature that allows users to create an HTML form that can be embedded into a public-facing website. When visitors fill out and submit the form, a new case is automatically created in Salesforce with the information from the form fields. Web-to-Case can also assign cases to queues or users based on predefined rules and criteria. Outbound message is not a valid tool, as it does not enable visitors to open cases. An outbound message is a type of workflow action that sends a secure XML message to a designated endpoint URL when a record meets certain criteria. An outbound message can be used to integrate Salesforce with external systems or applications. Screen flow is not a valid tool, as it does not enable visitors to open cases from a public-facing website. A screen flow is a type of flow that allows users to create an interactive guided process that can collect, display, and update data from multiple objects within Salesforce. A screen flow can be embedded into Lightning pages or Visualforce pages, but it cannot be exposed to unauthenticated users on a public website.

Email-to-Case is not a valid tool, as it does not enable visitors to open cases from a website. Email-to-Case is a feature that allows users to create cases from email messages sent to a specific email address. Email-to-Case can also capture email attachments and thread information and associate them with the case.
