The CISM certification is a valuable certification for professionals who are involved in information security management. Certified Information Security Manager certification is recognized globally and covers important domains in information security management. To be eligible for the certification, candidates must have relevant work experience and pass the certification exam.

Earning the CISM certification provides numerous benefits to information security professionals. It enhances their credibility and marketability in the industry by demonstrating their expertise and commitment to the field. It also opens up career opportunities in management and executive positions. Additionally, CISM holders are required to maintain their certification through continuing education and professional development, ensuring that they stay up-to-date with the latest trends and best practices in the field.

ISACA Certified Information Security Manager Sample Questions (Q567-Q572):

NEW QUESTION # 567

Which of the following would provide the BEST evidence to senior management that security control performance has improved?

- A. Reduction in inherent risk
- B. Demonstrated return on security investment
- **C. Results of an emerging threat analysis**
- D. Review of security metrics trends

Answer: C

NEW QUESTION # 568

Which of the following will BEST prevent external security attacks?

- A. Securing and analyzing system access logs
- **B. Network address translation**
- C. Static IP addressing
- D. Background checks for temporary employees

Answer: B

Explanation:

Section: INFORMATION RISK MANAGEMENT

Explanation:

Network address translation is helpful by having internal addresses that are nonroutable. Background checks of temporary employees are more likely to prevent an attack launched from within the enterprise.

Static IP addressing does little to prevent an attack. Writing all computer logs to removable media does not help in preventing an attack.

NEW QUESTION # 569

An organization has decided to implement additional security controls to treat the risks of a new process. This is an example of:

- A. eliminating the risk.
- **B. mitigating the risk.**
- C. transferring the risk.
- D. accepting the risk.

Answer: B

Explanation:

Explanation

Risk can never be eliminated entirely. Transferring the risk gives it away such as buying insurance so the insurance company can take the risk. Implementing additional controls is an example of mitigating risk. Doing nothing to mitigate the risk would be an example of accepting risk.

NEW QUESTION # 570

Which of the following is MOST critical to the successful implementation of information security within an organization?

- A. Strong risk management skills exist within the information security group
- B. Budget is allocated for information security tools
- C. Security is effectively marketed to all managers and employees
- D. The information security manager is responsible for setting information security policy

Answer: C

Explanation:

Section: INFORMATION SECURITY PROGRAM DEVELOPMENT

NEW QUESTION # 571

The BEST way to establish a recovery time objective (RTO) that balances cost with a realistic recovery time frame is to:

- A. determine daily downtime cost.
- B. conduct a risk assessment.
- C. perform a business impact analysis.
- D. analyze cost metrics.

Answer: C

NEW QUESTION # 572
