It is similar to the Deep-Security-Professional desktop-based software, with all the elements of the desktop practice exam. This mock exam can be accessed from any browser and does not require installation. The Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) questions in the mock test are the same as those in the real exam. And candidates will be able to take the web-based Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) practice test immediately through any operating system and browsers.

Trend Deep-Security-Professional Certification is ideal for IT professionals who want to demonstrate their knowledge and expertise in deep-security solutions to potential employers. Trend Micro Certified Professional for Deep Security certification can help candidates stand out in a competitive job market and increase their earning potential. Trend Micro Certified Professional for Deep Security certification is also a valuable asset for organizations that use Trend Micro's deep-security solutions, as it ensures that their IT professionals are knowledgeable and skilled in the products they use.

Pass Guaranteed Quiz Trend - Updated Deep-Security-Professional - New Trend Micro Certified Professional for Deep Security Test Test

As the old saying goes people change with the times. People must constantly update their stocks of knowledge and improve their practical ability. Passing the test Deep-Security-Professional certification can help you achieve that and buying our Deep-Security-Professional study materials can help you pass the test smoothly. Our Deep-Security-Professional Study Materials are superior to other same kinds of study materials in many aspects. Our products' test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. Each question and answer has been verified by the industry experts.

Trend Deep-Security-Professional certification exam is a vendor-neutral certification that is recognized globally. Trend Micro Certified Professional for Deep Security certification demonstrates a professional's ability to deploy and manage Trend Micro's Deep Security solution to protect against advanced threats and attacks. Trend Micro Certified Professional for Deep Security certification exam includes hands-on tasks that test a professional's ability to configure and manage Deep Security, as well as multiple-choice questions that assess their knowledge of the product.

Trend Deep-Security-Professional Certification is highly valued in the IT industry, particularly among employers who use Trend Micro's Deep Security product. Trend Micro Certified Professional for Deep Security certification provides a competitive edge to professionals seeking employment in the cybersecurity field, as well as those who want to advance their careers. Additionally, the certification is a testament to an individual's commitment to ongoing professional development and staying up-to-date on the latest trends and technologies in the cybersecurity field.

Trend Micro Certified Professional for Deep Security Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which of the following statements is true regarding Event Tagging?

- A. Events can be tagged automatically if they are similar to known good Events.
- B. Events can be automatically deleted based on tags.
- C. Adding a tag to an Event modifies the Event data by adding fields, including the name of the tag, the date the tag was applied, and whether the tag was applied manually or automatically
- D. Only a single tag can be assigned to an Event.

Answer: A

NEW QUESTION # 26

Which of the following statements is false regarding Firewall rules using the Bypass action?

- A. Firewall rules using the Bypass action do not generate log events.
- B. Firewall rules using the Bypass action allow incoming traffic to skip both Firewall and Intrusion Prevention analysis.
- C. Firewall rules using the Bypass action can be optimized, allowing traffic to flow as efficiently as if a Deep Security Agent was not there.
- D. Applying a Firewall rule using the Bypass action to traffic in one direction automatically applies the same action to traffic in the other direction.

Answer: D

Explanation:

Firewall rules using Bypass have the following noteworthy characteristics:

- * Bypass skips both Firewall and Intrusion Prevention analysis.
- * Since stateful inspection is for bypassed traffic, bypassing traffic in one direction does not automatically bypass the response in the other direction. As a result firewall rules using Bypass are always created in pairs, one for incoming traffic and another for outgoing.
- * Firewall rules using Bypass will not be logged. This is not a configurable behavior.
- * Some firewall rules using Bypass are optimized, in that traffic will flow as efficiently as if the Deep Security Agent/Deep Security Virtual Appliance was not there.

Explication: Study Guide - page (236)

NEW QUESTION # 27

What is IntelliScan?

- A. IntelliScan is a malware scanning method that monitors process memory in real time. It can identify known malicious processes and terminate them.
- B. IntelliScan is a method of identifying which files are subject to malware scanning as determined from the file content. It uses the file header to verify the true file type.
- C. IntelliScan reduces the risk of viruses entering your network by blocking real-time compressed executable files and pairs them with other characteristics to improve malware catch rates.
- D. IntelliScan is a mechanism that improves scanning performance. It recognizes files that have already been scanned based on a digital fingerprint of the file.

Answer: B

NEW QUESTION # 28

Which of the following statements is true regarding software inventories used as part of the Application Control Protection Module?

- A. Disable the Application Control Protection Module when installing software upgrades, otherwise, the new software will be prevented from installing.
- B. When an administrator allows software that would be otherwise blocked by the Enforcement Mode, it isn't added to the inventory of approved software. Instead, it is added to that computer's whitelist.

- C. An administrator can view the list of allowed software in the inventory from the Details tab for each individual Computer.
- D. An administrator can share the inventory of allowed software with other computers protected by Deep Security Agents, by copying the inventory database file (ac.db) from the source computer.

Answer: C

Explanation:

The software inventory for Application Control is visible in the Deep Security Manager console under the Details tab for each protected computer. This inventory lists all approved and detected software components for that agent.

From the official documentation:

"Administrators can view and manage the Application Control inventory for each computer from the Details tab in the Deep Security Manager console. This inventory lists all allowed, blocked, and detected software." Option A is incorrect: You do not need to disable the module for upgrades; use Maintenance Mode or update rules.

Option C is incorrect: Inventory is not shared by copying database files.

Option D is incorrect: Allowed software is added to the inventory.

NEW QUESTION # 29

A collection of servers protected by Deep Security do not have Internet access. How can Smart Scan be used on these computers?

- A. Install a Smart Protection Server in the environment and set it as the source for File Reputation information.
- B. Promote one of the Deep Security Agents on the air gapped computers to become a Relay.
- C. Smart Scan can be configured to use a local pattern file containing the same information as the Smart Protection Network.
- D. Smart Scan must contact the Smart Protection Network to function. Any servers without Internet access will be unable to use Smart Scan.

Answer: A

Explanation:

For environments without Internet access, a Smart Protection Server can be deployed locally. This server provides File Reputation and Web Reputation services for Smart Scan, allowing air-gapped systems to use Smart Scan without requiring direct Internet access.
