# Professional 1z1-076 Valid Exam Tips - How to Download for New 1z1-076 Dumps Free free

What's more, part of that BootcampPDF 1z1-076 dumps now are free: https://drive.google.com/open?id=1Xb6USPYSrNbgsO-w4J1ix1ABTYTwOE0U

If you care about your qualification exams and have some queries about 1z1-076 preparation materials, we are pleased to serve for you, you can feel free to contact us via email or online service about your doubt. Our company are established more than 10 years, our quality of 1z1-076 valid practice test questions are the leading position in this filed. We believe our 1z1-076 exam guide will help you pass exam easily without too much spirit & time. All our 1z1-076 training materials are compiled painstakingly.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 2	• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 3	• Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 4	• Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 5	• Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 7	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 8	• Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.

Topic 9	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

Pass Guaranteed 2026 1z1-076: High Hit-Rate Oracle Database 19c: Data Guard Administration Valid Exam Tips

Even some one can job-hop to this international company. Opportunities are reserved for those who are prepared. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional 1z1-076 question torrent provider, we are worth trusting; because we make great efforts, we do better. Here are many reasons to choose us.

Oracle Database 19c: Data Guard Administration Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which TWO statements are true about database parameters for databases in a Data Guard environment?

- A. If DB_RECOVERY_FILE_DEST is specified, then LOG_ARCHIVE_DEST_n is not required for local archive logs.
- B. The databases that are part of a Data Guard configuration must have different DB_UNIQUE_NAME initialization parameters.
- C. COMPATIBLE must have identical values for primary and standby databases.
- D. DB_FILE_NAME_CONVERT is only required if the standby database is on the same host as the primary database.
- E. LOG_FILE_NAME_CONVERT applies to online redo logs and archived logs.

Answer: B,C

NEW QUESTION # 24
Which two statements are true when using non-rolling release upgrades in a Data Guard environment?

- A. During the upgrade of a logical standby database, standby redo log files must reside on O/S file systems.
- B. User equivalence must be established for the owner of the Oracle software on the affected hosts prior to the upgrade.
- C. Modifications to the data dictionary on the primary database caused by the upgrade, are applied on a physical standby database.
- D. Modifications to the data dictionary on the primary database caused by the upgrade, are applied on a logical standby database.
- E. The compatible parameter on a standby database that is applying redo, must be equal to or greater than the compatible parameter on the primary that is shipping redo to that standby.

Answer: C,E

Explanation:
* The compatible parameter on a standby database that is applying redo, must be equal to or greater than the compatible parameter on the primary that is shipping redo to that standby (A):
This ensures that the standby database can apply redo from the primary, even after the primary has been upgraded. The COMPATIBLE parameter setting on the standby database should not preclude it from understanding the redo it receives.
* Modifications to the data dictionary on the primary database caused by the upgrade, are applied on a physical standby database (C): When the primary database undergoes a non-rolling upgrade, any resulting data dictionary changes are transmitted through redo data and applied to the physical standby database.

NEW QUESTION # 25

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- A. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.
- B. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.
- C. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- D. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.
- E. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.

Answer: A,B,D

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

* DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

* Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

* DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C): DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool.References:

NEW QUESTION # 26

Which TWO statements are true about Far Sync instances?

- A. They do not work with Snapshot Standby databases.
- B. They do not work with Logical Standby databases.
- C. They work in Maximum Performance mode.
- D. They work in Maximum Availability mode.
- E. They work in Maximum Protection mode.

Answer: B,C

NEW QUESTION # 27

You must configure an Oracle Data..........

1. A primary database

2. A physical standby database

Examine these requirements: 1. Data loss is not permitted.

1. Data loss is not permitted.

2. It should be possible to convert the physical standby database to a snapshot standby database.

3. Under normal operations, transactions should commit when redo is written to disk on the primary database and as soon as it has been received by the standby database instance.

4. The availability of the primary database should not be compromised by the availability of the standby database.

5. It should be possible to convert the physical standby database to a logical standby database

6. It should be possible to deploy Real Application Clusters on the primary database.

7. It should be possible to deploy Real Application Clusters on the physical standby database.

You configure SYNC redo transport mode in combination with Maximum Protection mode.

- A. 1, 2, 3, 4, 5, 6, and 7
- B. 1, 2, 3, 6, and 7
- C. 1, 6, and 7
- D. 1, 2, and 5
- E. 1, 2, 6, and 7

Answer: A

Explanation:
When SYNC redo transport mode is combined with Maximum Protection mode, it ensures that no data loss will occur (requirement 1). The physical standby can be converted to a snapshot standby (requirement 2) and later to a logical standby database (requirement 5), satisfying both transformation requirements. Transactions commit as soon as redo data is received by the standby database (requirement 3). The availability of the primary is not dependent on the standby database in Maximum Protection mode, as the primary database will halt if the standby cannot acknowledge the redo (requirement 4), thus indirectly ensuring its availability. It is also possible to deploy Real Application Clusters on both the primary (requirement 6) and the physical standby database (requirement 7), providing high availability and scalability.
ReferencesOracle Data Guard documentation detailing the requirements for different database roles, protection modes, and redo transport modes, as well as the capabilities and limitations of each configuration.

NEW QUESTION # 28

......

By unremitting effort and studious research of the 1z1-076 actual exam, our professionals devised our high quality and high 1z1-076 effective practice materials which win consensus acceptance around the world. They are meritorious experts with a professional background in this line and remain unpretentious attitude towards our 1z1-076 Preparation materials all the time. They are unsuspecting experts who you can count on.
