그 외, KoreaDumps Integration-Architect 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1xiy0IjRowPctPJ1MrgW-H92oVwy3r6v1>

KoreaDumps는 고객님의께서 첫번째Salesforce Integration-Architect시험에서 패스할수 있도록 최선을 다하고 있습니다. 만일 어떤 이유로 인해 고객이 첫 번째 시도에서 실패를 한다면, KoreaDumps는 고객에게Salesforce Integration-Architect덤프비용 전액을 환불 해드립니다.환불보상은 다음의 필수적인 정보들을 전제로 합니다.

Salesforce Integration-Architect 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • Design Integration Solutions: This topic enhances the skills needed to design robust integration solutions. It involves selecting integration patterns, defining solution components, addressing trade-offs, and leveraging appropriate Salesforce APIs, security mechanisms, and standards to meet technical requirements.
주제 2	<ul style="list-style-type: none"> • Evaluate the Current System Landscape: This topic ensures Salesforce application managers can analyze a system's current state to identify standards, limitations, boundaries, and protocols based on business requirements. It focuses on assessing constraints, identifying pain points, and aligning authentication and authorization needs with system landscapes to meet specific requirements.
주제 3	<ul style="list-style-type: none"> • Build Solution: Salesforce application managers learn to design and implement APIs, build scalable solutions, and ensure error handling and resilience in integrations. It also covers considerations for outbound calls, creating security solutions, and maintaining system stability during updates.

Integration-Architect인증문제, Integration-Architect인증시험대비 덤프공부

Salesforce인증Integration-Architect시험은 현재 치열한 IT경쟁 속에서 열기는 더욱더 뜨겁습니다. 응시자들도 더욱더 많습니다. 하지만 난이도난 전혀 낮아지지 않고 이지도 어려운 시험입니다. 어쨌든 개인적인 지식 장악도 나 정보 기술 등을 테스트하는 시험입니다. 보통은Salesforce인증Integration-Architect시험을 넘기 위해서는 많은 시간과 신경이 필요합니다.

최신 Salesforce Integration Architecture Designer Integration-Architect 무료 샘플문제 (Q13-Q18):

질문 # 13

A healthcare services company maintains a Patient Prescriptions System that has 50+ million records in a secure database. Their customer base and data set growing rapidly. They want to make sure that the following policies are enforced:

1. Identifiable patient prescriptions must exist only in their secure system's database and encrypted at rest.
2. Identifiable patient prescriptions must be made available only to people explicitly authorized in the Patient Prescriptions System assigned nurses and doctors, patient, and people explicitly the patient may authorize.
3. Must be available only to verified and pre-approved people or legal entities.

To enable this, the company provides the following capabilities:

1. One-time use identity tokens for patients, nurses, doctors, and other people that expire within a few minutes.
2. Certificates for legal entities.
- . RESTful services.

The company has a Salesforce Community Cloud portal for patients, nurses, doctors, and other authorized people. A limited number of employees analyze the identified data in Einstein Analytics.

Which two capabilities should the integration architect require for the Community Cloud portal and Einstein Analytics?

Choose 2 answers

- A. Callouts to RESTful services
- B. Encryption in transit and at rest
- C. Identity token data storage
- D. Bulk load for Einstein Analytics

정답: A,D

질문 # 14

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to login more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve their subscriber experience through self-registration and Single Sign-On (SSO).

The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud.

Which two requirements should the Salesforce Community Cloud support for self-registration and SSO?

Choose 2 answers

- A. OpenId Connect Authentication Provider and Registration Handler
- B. SAML SSO and just-in-time provisioning
- C. SAML SSO and Registration Handler
- D. OpenId Connect Authentication Provider and just-in-time provisioning

정답: A,B

질문 # 15

A company wants to standardize exception tracking, handling, and analytics. Given the following actions:

1. Build a companywide logging service hosted on a middleware platform
2. Create case object records for exceptions-based thresholds
3. Change all their Apex Loggers to publish Application Exceptions as custom Platform Events.

Which two specifications should the integration architect include in the logging service architecture?

Choose 2 answers

- A. Create Salesforce Cases using the Salesforce REST, SOAP or Bulk API.
- B. Subscribe to the Application Exceptions using the Salesforce Streaming API.
- C. Receive Application Events through Change Data Capture (CDC).
- D. Create Salesforce Cases conditionally using automatic Case creation rules.

정답: A,D

설명:

Explanation

Creating Salesforce Cases using the Salesforce REST, SOAP or Bulk API is a solution that can allow the logging service to create case records in Salesforce based on the exceptions received from the middleware platform. This way, the logging service can use the standard APIs to interact with Salesforce and leverage the features and functionality of the case object. Creating Salesforce Cases conditionally using automatic Case creation rules is a solution that can allow the logging service to create case records in Salesforce

based on predefined criteria and actions. This way, the logging service can reduce the number of API calls and avoid creating unnecessary or duplicate cases. Receiving Application Events through Change Data Capture (CDC) is not a solution that is related to this requirement, as CDC is used for capturing data changes in Salesforce and sending them to external systems, not for receiving data from external systems. Subscribing to the Application Exceptions using the Salesforce Streaming API is also not a solution that is related to this requirement, as Streaming API is used for subscribing to events or notifications from Salesforce, not for sending data to Salesforce. Reference: Salesforce Integration Architecture Designer Resource Guide, page 25-26

질문 # 16

An Integration Architect has built a Salesforce application that integrates multiple systems and keeps them synchronized via Platform Events.

What is taking place if events are only being published?

- A. The platform events has a trigger in Apex.
- **B. The platform events are published after the Apex transaction completes.**
- C. The platform events are published immediately before the Apex transaction completes.
- D. The platform events are being published from Apex.

정답: B

설명:

https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_define_ui.htm

질문 # 17

Northern Trail Outfitters needs to secure an integration with an external Microsoft Azure API Gateway.

What integration security mechanism should be employed?

- A. Configure mutual server authentication with two-way SSL using CA issued certificates.
- B. Implement Salesforce Shield with Encryption at Rest and generate a tenant secret.
- C. Use an API only user profile and implement use an external identity provider with federated API access.
- **D. Configure a connected app with an authorization endpoint of the API gateway and configure OAuth settings.**

정답: D

설명:

The OAuth protocol is a standard way to authorize access to web resources. By configuring a connected app with an authorization endpoint of the API gateway, Salesforce can obtain an access token from the API gateway and use it to invoke the external API securely. This avoids the need to manage certificates or user credentials for authentication. References: 1: Data Virtualization Pattern 2: OAuth 2.0 WebServer Authentication Flow
