

HP HPE7-J02 Test King - Customized HPE7-J02 Lab Simulation

BTW, DOWNLOAD part of ActualTestsQuiz HPE7-J02 dumps from Cloud Storage: https://drive.google.com/open?id=1I_j0ngt4kUgy_3kVcQjWZIfE23S-0YeM

Preparing for the Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) test can be challenging, especially when you are busy with other responsibilities. Candidates who don't use HPE7-J02 dumps fail in the HPE7-J02 examination and waste their resources. Using updated and valid HPE7-J02 Questions; can help you develop skills essential to achieve success in the HPE7-J02 certification exam.

HP HPE7-J02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• HPE Storage Portfolio and Strategy: This domain measures the knowledge of Solution Advisors in positioning HPE's Storage portfolio within enterprise infrastructure. Candidates must understand HPE Storage hardware, procurement options, available tools, and the overarching storage strategy, including its relevance to enterprise-scale solutions.
Topic 2	<ul style="list-style-type: none">• Planning and Validating Storage Solutions: This section assesses the role of Storage Consultants in evaluating complex, multi-vendor environments. Candidates will demonstrate their ability to plan, size, and validate storage solutions tailored for enterprise workloads, ensuring proposals meet customer requirements effectively.
Topic 3	<ul style="list-style-type: none">• Storage Transport in Multi-Site Solutions: This section evaluates the skills of Storage Architects in describing and applying transport technologies within multi-site solutions. It involves distinguishing between SAN topologies, analyzing transport components, and recommending advanced data protection methods to ensure reliability across enterprise environments.
Topic 4	<ul style="list-style-type: none">• Storage Access and Data Protection: This part of the exam tests the expertise of Infrastructure Engineers in configuring storage access, provisioning capacity, and applying replication policies. It also covers disaster recovery validation and role-based access control to secure storage operations.

Free PDF Quiz 2026 HP Reliable HPE7-J02: Advanced HPE Storage Integrator Solutions Written Exam Test King

Our Advanced HPE Storage Integrator Solutions Written Exam (HPE7-J02) questions PDF version is great for busy candidates who like to learn on the go with their smartphones or tablets. The Advanced HPE Storage Integrator Solutions Written Exam

(HPE7-J02) dumps PDF format's portability making it ideal for on-the-go studying from any smart device. Studying in PDF format is convenient since it can be printed out and used as a hard copy if you do not have access to a smart device at the moment.

HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

Two HPE Storage Alletra MP B10000 arrays are deployed with Active Peer Persistence. Both arrays and hosts are installed in close proximity to each other. To enable symmetric access, Peer Persistence must be configured accordingly. Which Host Proximity Parameter should be selected for host ESX31 in this case?

- A. Primary
- **B. All**
- C. Exclusive
- D. Secondary

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Option B (All) is correct because in an Active Peer Persistence deployment where both arrays and hosts are in close proximity (metro or campus cluster scenario), the hosts should be configured with Host Proximity = All. This ensures that the host (ESX31) can access both arrays symmetrically and concurrently, enabling active-active paths. This is essential to deliver seamless failover and load balancing across the arrays in an HPE Alletra MP Peer Persistence environment.

Analysis of Incorrect Options (Distractors):

A (Secondary): This is used for hosts located closer to the secondary array, to bias access toward it in asymmetric deployments. Not applicable here since the hosts are near both arrays.

C (Exclusive): This option assigns the host to a single array exclusively, preventing dual-active access. This would defeat the purpose of symmetric Peer Persistence.

D (Primary): Similar to Secondary, this biases access to only the primary array, which is not correct when arrays and hosts are in the same site for active-active.

Key Concept:

This question focuses on Host Proximity parameters in HPE Peer Persistence.

Primary/Secondary = asymmetric designs (hosts closer to one array).

All = symmetric design (hosts equidistant to both arrays, enabling active-active).

Exclusive = restricts access to one array only.

NEW QUESTION # 22

Refer to the exhibit.

Runtime Name	Status	Target	Name	Preferred
vmfsbat00:CD:T2L1R	Standby	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsbat00:CD:T2L1R	No
vmfsba00:CD:T1L1R	Standby	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsba00:CD:T1L1R	No
vmfsbat00:CD:T3L1R	Dead	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsbat00:CD:T3L1R	No
vmfsba00:CD:T2L1R	Standby	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsba00:CD:T2L1R	No
vmfsba00:CD:T3L1R	Dead	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsba00:CD:T3L1R	No
vmfsbat00:CD:T0L1R	Active (I/O)	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsbat00:CD:T0L1R	No
vmfsbat00:CD:T1L1R	Standby	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsbat00:CD:T1L1R	No
vmfsba00:CD:T0L1R	Active (I/O)	56:c9:ce:90:bc:2189:00 56:c9:ce:90:bc:2189:00	vmfsba00:CD:T0L1R	No

The above image represents an existing Alletra 6000 Peer Persistence configuration. Which statement could be true in this scenario?

- A. The amount of active (0) paths could reduce the performance of the array.
- B. The performance of the array could be reduced due to the amount of paths active.

- C. The performance of the array could be reduced due to a missing controller.

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

In the exhibit, several paths show "Standby" and some appear "Dead", while only a subset is Active (0).

This typically indicates that one storage controller may be missing or offline, which reduces redundancy and can cause performance degradation. In a healthy Peer Persistence environment, both controllers should present active and non-optimized paths.

Distractors:

A & B: Having multiple active paths does not inherently reduce performance; in fact, MPIO load balances traffic. The issue here is path failures, not excessive active paths.

Key Concept: MPIO pathing in HPE Peer Persistence and controller health.

Reference: HPE Alletra 6000 Peer Persistence Implementation Guide.

NEW QUESTION # 23

Your customer is a regional bank with branches in two different cities. Each branch is run as an isolated independent business and IT manages their SANs as separate fabrics to limit the scope of any failure. They use B-Series Switches.

The customer has requested a disaster recovery option that will allow replication between the two sites without merging the fabrics.

Which SAN technology meets the requirements?

- A. FC-FC routing
- B. Fabric partitioning
- C. NPIV
- D. FCIP

Answer: A

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

FC-FC routing (also known as Fibre Channel Routing / LSANs on B-Series switches) allows replication between separate SAN fabrics without merging them. This supports disaster recovery scenarios while preserving fabric isolation, exactly matching the bank's requirement.

Distractors:

A: FCIP tunnels extend Fibre Channel over IP networks, but this typically merges SAN domains.

C: NPIV (N_Port ID Virtualization) allows multiple virtual WWNs per port, not cross-fabric replication.

D: Fabric partitioning is zoning and segmentation within a single fabric, not between independent fabrics.

Key Concept: FC-FC routing on Brocade (B-Series) for SAN isolation with replication.

Reference: HPE B-Series SAN Design Guide, Brocade FCR/LSAN Concepts.

NEW QUESTION # 24

A local startup company has grown rapidly and now needs block storage for enterprise workloads. They are virtualized with VMware and have a small IT staff. They are evaluating an HPE Alletra MP and a Pure FlashArray //X90R4.

Environment:

VMware 8.0

Cisco switches

Dell servers

HPE servers

What statement about HPE should you point out as a differentiator?

- A. HPE provides full-stack visibility up to the app layer with prescriptive, actionable recommendations.
- B. HPE has live workload migration via the ActiveWorkload feature, based on a stretch cluster.
- C. HPE has the ability to disable garbage collection and overhead to meet workload requirements.
- D. HPE can natively tier data on a software-only deployment.

Answer: A

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE Alletra with InfoSight provides end-to-end visibility from infrastructure through to virtual machines and applications. It offers prescriptive, AI-driven recommendations to simplify management - a key differentiator for startups with small IT staff. Pure arrays do not offer the same level of integrated, cross-stack predictive analytics.

Distractors:

B: "ActiveWorkload" is not an HPE feature - HPE uses Peer Persistence for stretch clusters.

C: Garbage collection is managed automatically in HPE arrays; disabling it is not supported.

D: Data tiering is not natively provided as "software-only" - HPE uses GreenLake and Alletra services.

Key Concept: InfoSight = predictive analytics and app-to-infra visibility differentiator.

Reference: HPE InfoSight for Alletra Datasheet.

NEW QUESTION # 25

Your customer is deploying HPE Morpheus Enterprise Software as a single orchestration platform for compute and storage resources. To achieve a high-availability deployment in a single site, how many VMs must be deployed if distributed databases are not required?

- A. 1 VM
- B. 1 VM with VMware HA and DRS active
- C. 4 VMs with distributed database setup
- **D. 3 VMs**

Answer: D

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE Morpheus can run as a single VM in non-critical environments, but for high availability (HA) without distributed databases, the recommendation is to deploy 3 VMs in a cluster. This ensures quorum and redundancy across application nodes, protecting against single VM failure. Distributed database mode requires more VMs, but is not needed in this scenario.

Distractors:

A: 4 VMs are required only if distributed DB is enabled (PostgreSQL cluster), not here.

B/D: A single VM (with or without VMware HA) doesn't provide native Morpheus HA resilience.

Key Concept: Morpheus HA = 3-node cluster minimum without distributed DB.

Reference: HPE Morpheus Deployment and Architecture Guide.

NEW QUESTION # 26
