At present, our 300-715 exam guide gains popularity in the market. The quality of our 300-715 training material is excellent. After all, we have undergone about ten years' development. Never has our practice test let customers down. Although we also face many challenges and troubles, our company get over them successfully. If you are determined to learn some useful skills, our 300-715 Real Dumps will be your good assistant. Then you will seize the good chance rather than others.

Cisco ISE is an identity-based access control solution that provides secure access to network resources for authorized users and devices. The implementation and configuration of the Cisco ISE solution requires a thorough understanding of network security and access control policies, as well as the ability to configure and manage various ISE components.

Cisco Identity Services Engine (ISE) is a comprehensive security solution that provides secure access to network resources. Cisco ISE allows for the creation and enforcement of security policies across the network, ensuring that only authorized users and devices are granted access. The Cisco 300-715 Certification Exam covers the configuration and implementation of Cisco ISE, including the integration of third-party products and solutions.

Pass Guaranteed 2026 300-715: Implementing and Configuring Cisco Identity Services Engine Updated New Study Guide

Don't mind what others say, trust you and make a right choice. We hope that you understand our honesty and cares, so we provide free demo of 300-715 exam software for you to download before you purchase our dump so that you are rest assured of our dumps. After your payment of our dumps, we will provide more considerate after-sales service to you. Once the update of 300-715 Exam Dump releases, we will inform you the first time. You will share the free update service of 300-715 exam software for one year after you purchased it.

Cisco 300-715 (Implementing and Configuring Cisco Identity Services Engine) Certification Exam is designed to test an individual's skills and knowledge in implementing and configuring Cisco's Identity Services Engine. Implementing and Configuring Cisco Identity Services Engine certification is aimed at IT professionals who are responsible for implementing, managing, and troubleshooting network infrastructure that incorporates Cisco's Identity Services Engine.

Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q210-Q215):

NEW QUESTION # 210

An administrator for a small network is configuring Cisco ISE to provide dynamic network access to users. Management needs Cisco ISE to not automatically trigger a CoA whenever a profile change is detected. Instead, the administrator needs to verify the new profile and manually trigger a CoA.

What must be configuring in the profiler to accomplish this goal?

- A. Session Query
- **B. No CoA**
- C. Reauth
- D. Port Bounce

Answer: B

Explanation:

NEW QUESTION # 211

An engineer is starting to implement a wired 802.1X project throughout the campus. The task is for failed authentication to be logged to Cisco ISE and also have a minimal impact on the users. Which command must the engineer configure?

- A. authentication host-mode multi-auth
- B. authentication open
- C. pae dot1x enabled
- **D. monitor-mode enabled**

Answer: D

Explanation:

In the context of a wired 802.1X deployment with Cisco ISE, the requirement is to log failed authentications while minimizing user impact. Let's analyze each option:

A) authentication open - This command configures the port to allow network access regardless of the authentication state. It's useful in situations where specific devices can't perform 802.1X authentication but should still be allowed network access. However, it doesn't specifically address the logging of failed authentications.

B) pae dot1x enabled - PAE (Port Access Entity) refers to the entity on a network device that enforces access control. This command enables 802.1X on the port, which is a prerequisite for implementing 802.1X, but doesn't directly relate to logging failed authentication attempts.

C) authentication host-mode multi-auth - This command configures the port to allow multiple authenticated sessions. This mode is used when multiple devices are connected to the same port (like in a conference room). While it's relevant for 802.1X environments, it doesn't specifically cater to logging failed authentications or minimizing user impact.

D) monitor-mode enabled - This command is used in the context of 802.1X to enable Monitor Mode on a port. Monitor Mode allows a port to grant limited network access to endpoints without 802.1X capabilities. It's often used to ease the deployment of 802.1X by monitoring the authentication status without fully enforcing access control, thereby minimizing user impact. It also helps in logging authentication attempts, including failures.

NEW QUESTION # 212

An engineer is configuring a virtual Cisco ISE deployment and needs each persona to be on a different node. Which persona should be configured with the largest amount of storage in this environment?

- A. Platform Exchange Grid
- B. Primary Administration
- **C. Monitoring and Troubleshooting**
- D. policy Services

Answer: C

Explanation:

https://www.cisco.com/c/en/us/td/docs/security/ise/2-1/install_guide/b_ise_InstallationGuide21/b_ise_InstallationGuide21_chapter_011.html

NEW QUESTION # 213

Which two probes must be enabled for the ARP cache to function in the Cisco ISE profile service so that a user can reliably bind the IP address and MAC addresses of endpoints? (Choose two.)

- **A. DHCP**
- B. NetFlow
- **C. RADIUS**
- D. SNMP
- E. HTTP

Answer: A,C

Explanation:

Cisco ISE implements an ARP cache in the profiling service, so that you can reliably map the IP addresses and the MAC addresses of endpoints. For the ARP cache to function, you must enable either the DHCP probe or the RADIUS probe. The DHCP and RADIUS probes carry the IP addresses and the MAC addresses of endpoints in the payload data. The dhcp-requested address attribute in the DHCP probe and the Framed-IP-address attribute in the RADIUS probe carry the IP addresses of endpoints, along with their MAC addresses, which can be mapped and stored in the ARP cache.

NEW QUESTION # 214

An administrator needs to give the same level of access to the network devices when users are logging into them using TACACS+. However, the administrator must restrict certain commands based on one of three user roles that require different commands. How is this accomplished without creating too many objects using Cisco ISE?

- A. Create one shell profile and multiple command sets.
- B. Create multiple shell profiles and multiple command sets.
- C. Create multiple shell profiles and one command set
- D. Create one shell profile and one command set.

Answer: A

Explanation:
