Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q23-Q28):

NEW QUESTION # 23

CRM Analytics users at Cloud Kicks are granted access to an app with specific dashboards. When trying to download a specific widget, they are unable to do so.

What is causing the issue?

- A. The users have access to the dashboard but not the dataset.
- B. The dashboard has been created for internal use and the users have a view only license.
- C. The permission set for the users is missing the download data permission.

Answer: C

Explanation:

As in the previous question, the issue is related to permissions. Users can be granted access to dashboards and apps, but if their permission set does not explicitly allow the "Download Data" action, they will not be able to download the widget data. This is a common issue encountered when users have restricted permissions, especially in environments where security and data access are tightly controlled.

NEW QUESTION # 24

A versioning feature allows CRM Analytics users to be added as Publishers and make changes separately while a 'Live' version is still being used by other users. Once the changes are complete, the user can then set their updated version as the Live version. Which CRM Analytics item is this leveraged for?

- A. App
- B. goats
- C. Dataset

Answer: A

Explanation:

In CRM Analytics, the versioning feature described is typically leveraged for Apps. This feature allows:

- * Parallel Development: Users can work on changes in a separate version without affecting the live version being accessed by others.
- * Controlled Publishing: Once changes are finalized, the user can then promote their version to be the new live version, ensuring seamless updates without disrupting ongoing usage.
- * Collaborative Workflows: Facilitates teamwork by allowing multiple users to propose and test changes in a controlled environment before making those changes live.

This approach ensures that CRM Analytics apps remain dynamic and can evolve over time while maintaining stability and continuity for end-users.

However, they notice that the data syncs and recipe run jobs fail repeatedly. Upon investigation, they realize the data syncs and recipes are tightly coupled which leads to too many runs being queued and eventually being canceled.

- B. Raise a case with Salesforce Support to help increase the concurrency limits of the org.
- C. Set up failure notifications so that the CRM Analytics consultant gets notified when this happens and can fix the issue.

Answer: A

NEW QUESTION # 26
