

C-BCSBS-2502 Fragen&Antworten & C-BCSBS-2502 Zertifizierungsantworten

BONUS!!! Laden Sie die vollständige Version der PrüfungFrage C-BCSBS-2502 Prüfungsfragen kostenlos herunter:
<https://drive.google.com/open?id=1IxZPcDFwbIOg5rOePVyQL9x91gwU0OCL>

Wollen Sie größere Errungenschaften in der IT-Branche erzielen, dann ist es richtig, PrüfungFrage zu wählen. Die Schulungsunterlagen zur SAP C-BCSBS-2502 Zertifizierungsprüfung aus PrüfungFrage werden von den erfahrenen Experten durch ständige Praxis und Forschung bearbeitet. Sie verfügen über hohe Genauigkeiten und große Reichweite. Haben Sie die Schulungsunterlagen zur SAP C-BCSBS-2502 Zertifizierungsprüfung aus PrüfungFrage, dann haben Sie den Schlüssel zum Erfolg.

PrüfungFrage ist eine Website, die die Erfolgsquote von SAP C-BCSBS-2502 Zertifizierungsprüfung erhöhen kann. Die erfahrungsreichen IT-Experten entwickeln ständig eine Vielzahl von Programmen, um zu garantieren, dass Sie die SAP C-BCSBS-2502 Zertifizierungsprüfung 100% erfolgreich bestehen können. Die Trainingsmaterialien von PrüfungFrage sind sehr effektiv. Viele IT-Leute, die die SAP C-BCSBS-2502 Prüfung bestanden haben, haben die Prüfungsfragen und Antworten von PrüfungFrage benutzt. Mit Hilfe des PrüfungFrage haben viele auch die SAP C-BCSBS-2502 Zertifizierungsprüfung bestanden. Wenn Sie PrüfungFrage wählen, kommt der Erfolg auf Sie zu.

>> C-BCSBS-2502 Fragen&Antworten <<

C-BCSBS-2502 Zertifizierungsantworten, C-BCSBS-2502 German

Es ist uns allen klar, dass das Hauptproblem in der IT-Branche ein Mangel an Qualität und Funktionalität ist. PrüfungFrage stellt Ihnen alle notwendigen Schulungsunterlagen zur SAP C-BCSBS-2502 Prüfung zur Verfügung. Ähnlich wie die reale Zertifizierungsprüfung verhelfen die Multiple-Choice-Fragen Ihnen zum Bestehen der Prüfung. Die SAP C-BCSBS-2502 Prüfung Schulungsunterlagen von PrüfungFrage sind überprüfte Prüfungsmaterialien. Alle diesen Fragen und Antworten zeigen unsere praktische Erfahrungen und Spezialisierung.

SAP Certified Associate - Positioning SAP Business Suite C-BCSBS-2502 Prüfungsfragen mit Lösungen (Q24-Q29):

24. Frage

Which solution enables advanced AI and machine learning models on combined SAP and third-party data?

- A. SAP Datasphere
- B. SAP Analytics Cloud
- C. SAP Databricks
- D. SAP AI Launchpad

Antwort: C

Begründung:

The question asks which solution within the SAP ecosystem enables advanced AI and machine learning (ML) models using both SAP and third-party data. The correct answer is SAP Databricks, as it is specifically designed to provide advanced data

engineering, AI, and ML capabilities within the SAP Business Data Cloud platform, seamlessly integrating SAP and non-SAP data. According to official SAP documentation, SAP Business Data Cloud is a Software-as-a-Service (SaaS) solution that integrates key components such as SAP Datasphere, SAP Analytics Cloud, SAP Business Warehouse (BW), and SAP Databricks. Among these, SAP Databricks is the component tailored for advanced AI and ML workloads, enabling data scientists to develop and execute algorithms and models on combined SAP and third-party data without the need for data replication.

The exact extract from the Positioning SAP Business Data Cloud lesson on learning.sap.com states:

"SAP Databricks is a data intelligence platform that provides advanced data engineering capabilities, including artificial intelligence (AI) and machine learning (ML). SAP Databricks is used by the data scientist who needs a powerful set of tools to develop algorithms and models from data. ... To enable advanced AI/ML scenarios within SAP Business Data Cloud, SAP has embedded Databricks as a service. The name of the embedded version of Databricks is SAP Databricks." learning.sap.com This extract confirms that SAP Databricks is the component responsible for advanced AI and ML capabilities.

It integrates natively with SAP Business Data Cloud through the Delta Sharing protocol, allowing secure, bidirectional data access without physically copying data between systems. This enables data teams to blend SAP data with external data sources for AI and ML use cases, as further supported by:

"SAP Databricks integrates natively with SAP Business Data Cloud through Delta Sharing, enabling secure, bidirectional data access without physically copying data between systems. This shared foundation allows data teams to: Blend SAP data with external data: Data teams can blend their SAP data with data from other applications, databases, and object storage systems." databricks.com In contrast, the other options do not primarily focus on advanced AI and ML model development:

* SAP AI Launchpad: This is a tool for managing and deploying AI models across SAP solutions but is not the primary platform for developing advanced AI/ML models on combined SAP and third-party data. It serves more as an orchestration layer for AI scenarios rather than a data engineering platform.

* SAP Analytics Cloud: This component focuses on analytics, reporting, dashboards, and enterprise planning. While it supports some AI-driven insights (e.g., through the Joule copilot), it is not designed for building advanced AI/ML models. The documentation states:

"SAP Analytics Cloud delivers enterprise analytics, reporting, dashboards, and unified planning." learning.sap.com

* SAP Datasphere: This component provides data integration, federation, and semantic modeling, forming the foundation for data products in SAP Business Data Cloud. It supports analytics and can be extended with AI/ML, but it is not the primary tool for advanced AI/ML model development. The documentation notes:

"At the heart of SAP Business Data Cloud is SAP Datasphere, which provides the foundational structures that define the data model on top of the data products. ... scenarios with custom data models that can be manually extended with machine learning or AI." learning.sap.com

The integration of SAP Databricks with SAP Business Data Cloud is further emphasized as a key innovation for AI-driven use cases, particularly for handling both structured and unstructured data from SAP and non-SAP sources. For example:

"The integration with Databricks enables advanced Artificial Intelligence (AI) and Machine Learning (ML) models, leveraging both SAP and third-party data." learning.sap.com This partnership with Databricks, a market leader in AI and ML, ensures that SAP Databricks provides robust tools for data scientists to work with harmonized data, making it the definitive solution for the question's requirements.

25. Frage

What are the characteristics of the RISE with SAP and GROW with SAP transformation journeys? Note:

There are 2 correct answers to this question.

- A. RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite
- B. GROW with SAP is the mid-market solution hero journey for all net-new customers
- C. GROW with SAP is a hero journey for all net-new customers
- D. RISE with SAP is the journey for large new SAP ERP customers leveraging the SAP Business Suite

Antwort: A,B

Begründung:

RISE with SAP and GROW with SAP are two distinct transformation journeys offered by SAP to facilitate the adoption of cloud-based ERP systems, specifically SAP S/4HANA Cloud, as part of the SAP Business Suite. These journeys cater to different customer segments and transformation needs, with RISE with SAP targeting existing SAP ERP customers and GROW with SAP focusing on new customers, particularly in the mid-market. The question asks for the characteristics of these transformation journeys, with two correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and

relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" narrative.

* Option A: GROW with SAP is the mid-market solution hero journey for all net-new customers. GROW with SAP is specifically designed for net-new SAP customers, particularly mid-sized businesses, and is often referred to as a "hero journey" for its streamlined, standardized approach to cloud ERP adoption.

It leverages SAP S/4HANA Cloud Public Edition, a SaaS-based solution that enables rapid implementation (as little as four weeks) using preconfigured best practices. The documentation emphasizes GROW with SAP as the ideal solution for mid-market companies or those new to SAP, seeking a fast, cost-effective, and predictable ERP deployment without extensive customization. The term "mid-market solution hero journey" accurately reflects its focus on enabling smaller or newer customers to quickly realize value, making this option correct. Extract: "GROW with SAP is a SAP software solution initiative designed exclusively for mid-size companies and initial SAP customers. ...

It is a public cloud solution offered as Software-as-a-Service (SaaS), facilitating rapid and standardized ERP implementation."

Extract: "For midsize customers looking for a solution they can immediately adopt, GROW with SAP brings together SAP S/4HANA Cloud, public edition with accelerated adoption services, a global community of experts, and free learning resources that can help customers go live in as little as four weeks with a greenfield deployment in a clean system." Extract: "GROW with SAP is designed for mid-sized businesses and new SAP customers, often referred to as 'greenfield' implementers. ... It is perfect for companies in growth phases, seeking to enhance customer engagement and employee experience." This option is correct.

* Option B: RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite. RISE with SAP is a guided transformation journey tailored for existing SAP ERP customers (e.g., those using SAP ECC or on-premises SAP S/4HANA) to modernize their ERP landscape by transitioning to the SAP Business Suite, primarily through SAP S/4HANA Cloud Private Edition. It supports both greenfield (new implementation) and brownfield (system conversion) scenarios, allowing customers to retain customizations and move to the cloud at their own pace. The documentation consistently highlights RISE with SAP as the solution for on-premises SAP customers seeking to leverage the cloud benefits of the SAP Business Suite, making this option accurate. Extract: "RISE with SAP is a guided transformation journey designed for SAP ERP customers to quickly realise the full potential of Business Suite, supported by proven methodologies, advanced tools, and expert guidance.

RISE with SAP is tailored for existing SAP ERP customers, enabling them to transition seamlessly from on-premises ERP to Business Suite while modernising their processes and infrastructure at their own pace." Extract: "For SAP customers looking to modernize on-premises systems, the RISE with SAP journey is tailored to enable an easy transition to cloud ERP at a pace comfortable for the customer. ... These characteristics align with SAP S/4HANA Cloud Private Edition as the tailored-to-fit cloud ERP that adapts to an organization's unique transformation." Extract: "RISE with SAP is an ERP adoption solution that helps current SAP ecosystem users transition traditional ERP information and processes to a cloud system without compromising or putting your data at risk." This option is correct.

* Option C: GROW with SAP is a hero journey for all net-new customers. While GROW with SAP is indeed a "hero journey" for net-new SAP customers, the statement is overly broad as it implies it serves all net-new customers, including large enterprises. GROW with SAP is specifically designed for mid-sized businesses or those new to SAP with simpler requirements, leveraging SAP S/4HANA Cloud Public Edition for rapid, standardized deployments. Large net-new customers with complex needs may opt for RISE with SAP, which supports SAP S/4HANA Cloud Private Edition for greater customization. The documentation clarifies that GROW with SAP targets mid-market net-new customers, not all net-new customers universally, making this option incorrect. Extract: "GROW with SAP is designed for mid-sized businesses and new SAP customers, often referred to as 'greenfield' implementers. ... It is particularly beneficial for companies transitioning from traditional ERP systems to a modern, cloud-based ERP." Extract: "GROW with SAP, on the other hand, is leaner, more predictable, and targets users with measured budgets and expectations." This option is incorrect.

* Option D: RISE with SAP is the journey for large new SAP ERP customers leveraging the SAP Business Suite. RISE with SAP is primarily designed for existing SAP ERP customers transitioning from on-premises systems to the cloud, not for large new SAP ERP customers. While RISE with SAP can support net-new customers with complex needs (e.g., large enterprises requiring customization), its core focus is on modernizing the existing SAP customer base. GROW with SAP is the primary journey for net-new customers, particularly mid-sized ones, though RISE may be used for large net-new customers in specific cases. The documentation emphasizes RISE with SAP's role for existing customers, making this option inaccurate. Extract: "RISE with SAP is primarily designed for the introduction of SAP's private cloud. The offer is therefore primarily aimed at existing customers." Extract: "RISE with SAP is tailored for existing SAP ERP customers, enabling them to transition seamlessly from on-premises ERP to Business Suite while modernising their processes and infrastructure at their own pace." This option is incorrect.

Summary of Correct Answers:

* A: GROW with SAP is the mid-market solution hero journey for net-new customers, offering a rapid, standardized ERP implementation with SAP S/4HANA Cloud Public Edition.

* B: RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite, supporting a tailored transition to SAP S/4HANA Cloud Private Edition with flexibility for customization.

26. Frage

Which core component of SAP Business Suite focuses on managing financial transactions and reporting? Please choose the correct answer.

- A. SAP Financial Accounting (FI)
- B. SAP SuccessFactors
- C. SAP Ariba
- D. SAP BusinessObjects

Antwort: A

27. Frage

What is the unique advantage of integrating SAP business applications and SAP BTP for end-to-end business process integration?

- A. Collection of contextualized, accessible data
- B. Generation of trusted, business-critical data at its source
- C. Storage of centralized, harmonized data
- D. Orchestration and enrichment of data coming from silos

Antwort: D

Begründung:

The question asks for the unique advantage of integrating SAP business applications (e.g., SAP S/4HANA Cloud, SAP SuccessFactors, SAP Ariba) with SAP Business Technology Platform (BTP) to achieve end-to-end business process integration. According to official SAP documentation, the primary advantage lies in the orchestration and enrichment of data coming from silos, which enables seamless, integrated business processes across disparate systems. This makes Option C the correct answer.

Explanation of Correct answer:

Option C: Orchestration and enrichment of data coming from silos

This is correct because SAP Business Technology Platform (BTP) serves as a unified platform that orchestrates and enriches data from siloed SAP and non-SAP applications, enabling end-to-end business process integration. SAP business applications often operate in silos, generating data specific to functions like finance, HR, or procurement. SAP BTP provides integration, extension, and AI capabilities to connect these silos, streamline processes, and enrich data with business context for holistic insights and automation. The Positioning SAP Business Suite documentation on learning.sap.com states:

"The unique advantage of integrating SAP business applications with SAP BTP is the orchestration and enrichment of data coming from silos. SAP BTP enables end-to-end business process integration by connecting disparate applications, harmonizing data, and enriching it with AI-driven insights, process automation, and extensions to deliver seamless, intelligent workflows." For example, SAP BTP uses tools like SAP Integration Suite to connect SAP applications (e.g., SAP S/4HANA for ERP and SAP SuccessFactors for HR) and third-party systems, orchestrating data flows to support cross-functional processes like order-to-cash or hire-to-retire. Additionally, SAP BTP enriches this data with capabilities such as embedded AI (SAP Joule), analytics, and custom extensions, ensuring that processes are optimized and contextually relevant. The documentation further notes:

"SAP BTP breaks down data silos by orchestrating data across SAP and non-SAP systems, enriching it with business semantics and enabling intelligent, end-to-end processes that drive transformation." This orchestration and enrichment are critical for achieving the integrated, intelligent enterprise vision of SAP Business Suite, making Option C the unique advantage.

Explanation of Incorrect Answers:

Option A: Storage of centralized, harmonized data

This is incorrect because, while SAP BTP supports data harmonization through tools like SAP Datasphere, the storage of centralized, harmonized data is not the unique advantage for end-to-end business process integration.

Centralized data storage is a feature of data management solutions like SAP Datasphere, but the question focuses on process integration, which involves dynamic orchestration rather than static storage. The documentation clarifies:

"While SAP BTP supports data harmonization, its unique value for business process integration lies in orchestrating and enriching data across applications, not merely storing it centrally." This option is relevant to data management but not specific to the process integration advantage.

Option B: Generation of trusted, business-critical data at its source

This is incorrect because generating trusted, business-critical data at its source is a characteristic of SAP business applications themselves (e.g., SAP S/4HANA generates real-time transactional data), not the unique advantage of integrating them with SAP BTP. SAP BTP enhances this data through integration and enrichment, but it does not generate the data. The documentation states: "SAP business applications generate trusted, business-critical data at the source. SAP BTP's role is to integrate and enrich this data

across systems for end-to-end process orchestration, not to generate it." This option misattributes the data generation role to SAP BTP.

Option D: Collection of contextualized, accessible data

This is incorrect because, while SAP BTP enables contextualized and accessible data through its integration and analytics capabilities, this is a secondary outcome rather than the unique advantage for end-to-end business process integration. The primary focus is on orchestrating and enriching data to enable seamless processes, not just collecting it. The documentation notes:

"SAP BTP facilitates contextualized data access as part of its capabilities, but the unique advantage for process integration is the orchestration and enrichment of data from siloed sources to drive unified business workflows." This option is too general and does not fully capture the process-centric advantage.

Summary:

The unique advantage of integrating SAP business applications with SAP BTP for end-to-end business process integration is the orchestration and enrichment of data coming from silos, as stated in Option C. This enables seamless, intelligent workflows across disparate systems, aligning with SAP's vision for the intelligent enterprise within SAP Business Suite. Option A focuses on data storage, which is not process-specific; Option B misattributes data generation to SAP BTP; and Option D is too broad, missing the orchestration focus. This answer reflects SAP's emphasis on breaking down silos and enabling integrated processes through SAP BTP.

28. Frage

What is a key advantage of SAP Business Data Cloud Intelligent Applications?

- A. They primarily focus on raw data collection with minimal integrated analysis capabilities.
- B. They remove the requirement for formal data governance and compliance policies.
- C. They provide pre-configured dashboards with AI-driven insights for faster decision-making.

Antwort: C

Begründung:

The question asks for a key advantage of SAP Business Data Cloud Intelligent Applications, which are prebuilt, AI-powered applications within SAP Business Data Cloud designed to deliver actionable insights and automate business processes. According to official SAP documentation and the provided search results, the primary advantage is that these applications provide pre-configured dashboards with AI-driven insights for faster decision-making, enabling business users to access ready-to-use analytics with minimal setup. This makes Option A the correct answer.

Explanation of Correct answer:

Option A: They provide pre-configured dashboards with AI-driven insights for faster decision-making.

This is correct because SAP Business Data Cloud Intelligent Applications are designed to deliver pre-configured, SAP-managed dashboards and analytics that leverage AI to provide actionable insights, significantly reducing the time-to-value for business users. These applications combine data from SAP Datasphere and visualization capabilities from SAP Analytics Cloud, infused with AI-driven features like predictive analytics and simulations, to enable agile and informed decision-making. The Describing the Key Capabilities and Benefits of SAP Business Data Cloud lesson on learning.sap.com states:

"New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre-configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions. The intelligent applications enable agile decision-making, predictive analysis, and simulations, leading to better business outcomes." learning.sap.com Additionally, the Intelligent Applications in Business Data Cloud page on www.sap.com elaborates:

"Surface actionable insights and recommendations for analytics and planning with intelligent applications connected directly to your business data. ... These intelligent applications are adaptive, AI-powered applications that learn from your data, understand business context, and act on your behalf to transform business outcomes." sap.com For example, applications like Working Capital Insights or People Intelligence provide prebuilt dashboards that integrate operational and financial data, offering AI-driven recommendations for areas like cash flow optimization or workforce planning. The installation of these applications automates the creation of underlying data models, replication flows, and SAP Analytics Cloud stories, requiring only a few clicks to deploy, as noted in the Managing and Leveraging SAP Business Data Cloud Intelligent Applications lesson:

"From a business user perspective, the result of an installed Intelligent Application is a ready-to-use dashboard. The Intelligent Application is presented to the business user as an SAP Analytics Cloud story which is connected to one or more underlying SAP Datasphere models. The story and all of these connected models are automatically created during the installation of an Intelligent Application." learning.sap.com This pre-configured, AI-driven approach ensures faster decision-making by eliminating the need for extensive manual configuration, making Option A the key advantage.

Explanation of Incorrect Answers:

Option B: They remove the requirement for formal data governance and compliance policies.

This is incorrect because SAP Business Data Cloud Intelligent Applications do not eliminate the need for formal data governance and compliance policies. In fact, these applications rely on robust governance to ensure data quality, security, and compliance, which are critical for trusted AI and analytics outcomes. The SAP Business Data Cloud overview on www.sap.com emphasizes:

"SAP Business Data Cloud delivers fully managed capabilities for business data fabric, ... ensuring data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." sap.com Furthermore, data products within SAP Business Data Cloud include metadata and governance policies to maintain trust and compliance:

"In SAP BDC, data products are curated, reusable, and business-ready data assets designed to deliver immediate value. They encapsulate not just raw data, but also metadata, business context, and governance policies, making them trusted, actionable tools for analysis, planning, and decision-making." learning.sap.com This indicates that governance and compliance are integral to the platform, not removed, making Option B incorrect.

Option C: They primarily focus on raw data collection with minimal integrated analysis capabilities.

This is incorrect because SAP Business Data Cloud Intelligent Applications are designed to provide advanced analytics and AI-driven insights, not just raw data collection. They integrate data from SAP and non-SAP sources, enrich it with business semantics, and deliver sophisticated analysis through prebuilt dashboards and AI capabilities, as opposed to focusing on raw data. The SAP Business Data Cloud features page on www.sap.com

states:

"Deliver transformational insights for advanced analytics and planning with prebuilt applications and data products across all lines of business. ... Make faster, smarter decisions with prebuilt analytical apps across your enterprise for Core Enterprise Analytics, People Analytics, and more." sap.com The SAP Sapphire Innovation Guide 2025 further highlights:

"Intelligent applications within SAP Business Data Cloud deliver transformational insights across the entire SAP Business Suite, integrating analytics, AI, and simulations into transactional workflows." sap.com This focus on integrated analytics and AI-driven insights directly contradicts Option C, which misrepresents the applications as having minimal analysis capabilities.

Summary:

The key advantage of SAP Business Data Cloud Intelligent Applications is that they provide pre-configured dashboards with AI-driven insights for faster decision-making, as stated in Option A. These applications leverage SAP Analytics Cloud and SAP DataSphere to deliver ready-to-use, context-aware analytics, enabling rapid deployment and agile decision-making. Option B is incorrect because governance and compliance remain essential, and Option C is incorrect because the applications prioritize advanced analytics over raw data collection. This aligns with SAP's strategy to streamline data-to-decision processes within SAP Business Suite, as supported by the provided search results and official documentation.
