

Exclusive GICSP Exam Questions And GICSP Dumps For The 2026 Exam

PremiumVCEDump GIAC GICSP exam materials contain the complete unrestricted dump. So with it you can easily pass the exam. PremiumVCEDump GIAC GICSP exam training materials is a good guidance. It is the best training materials. You can use the questions and answers of PremiumVCEDump GIAC GICSP Exam Training materials to pass the exam.

It's crucial to have reliable GIAC GICSP exam questions and practice test to prepare for the GICSP Exam. PremiumVCEDump offers real GIAC GICSP exam questions with accurate answers in our GICSP practice exam format. Our GICSP Practice Questions and answers resemble the actual GIAC GICSP questions, and they have been verified by experts to ensure your success in the Global Industrial Cyber Security Professional (GICSP) Exam with ease.

>> **GICSP Valid Test Preparation** <<

Exam GICSP Course, GICSP Paper

The Web-Based GIAC GICSP practice test evaluates your Global Industrial Cyber Security Professional (GICSP) exam preparation with its self-assessment features. With this computer-based program, you may automate the entire GIAC exam testing procedure. The web-based GIAC GICSP practice test elegantly designed interface is compatible with all browsers, including Internet Explorer, Safari, Opera, Google Chrome, and Mozilla Firefox. It will make practice and preparation for the GIAC GICSP Exam more intelligent, quick, and simple. So, you can be confident that you will find all you need to know to pass the GIAC GICSP exam questions on the first try.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which of the following types of network devices sends traffic only to the intended recipient node?

- A. Wireless access point
- B. Wireless bridge
- C. Ethernet hub
- **D. Ethernet switch**

Answer: D

Explanation:

An Ethernet switch (C) is a network device that learns the MAC addresses of connected devices and forwards packets only to the port associated with the destination node, reducing unnecessary traffic and improving security and efficiency.

An Ethernet hub (A) broadcasts incoming packets to all ports, not selectively.

A wireless access point (B) broadcasts signals to multiple wireless clients within range.

A wireless bridge (D) connects two network segments wirelessly but forwards traffic according to device types, not necessarily selectively to single nodes.

GICSP's ICS network segmentation and architecture domain underline the use of switches to limit broadcast traffic and reduce attack surfaces.

NEW QUESTION # 39

Implementation of LDAP to manage and control access to your systems is an outcome of which NIST CSF core function?

- A. Detect
- B. Respond
- C. Protect
- D. Identify

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

LDAP (Lightweight Directory Access Protocol) is used to manage authentication and authorization services, controlling user access to systems and resources.

This function aligns with the Protect function (A) of the NIST Cybersecurity Framework (CSF), which focuses on access control, identity management, and protective technology to safeguard systems.

Identify (B) relates to asset management and risk assessment.

Respond (C) deals with incident response.

Detect (D) relates to discovering cybersecurity events.

GICSP maps LDAP implementation as a key protective control to ensure authorized access in ICS environments.

NEW QUESTION # 40

What is a benefit of MECM over VWSUS?

- A. Minimal system resource use
- B. Lower operating and product cost
- C. Hardware and software inventory control
- D. Lower configuration and management overhead

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Microsoft Endpoint Configuration Manager (MECM) provides advanced features compared to Windows Server Update Services (WSUS), including:

Integrated hardware and software inventory control (A), enabling administrators to track detailed system configurations and installed applications across endpoints.

WSUS primarily focuses on patch deployment and update management without comprehensive inventory capabilities.

MECM's enhanced management capabilities justify its greater resource use and complexity, making it more suitable for enterprise-scale patching and asset management in ICS environments.

NEW QUESTION # 41

Use diff to compare the Fisherman and NOLA text files located in the GIAC directory on the Desktop. Which word exists in one file, that does not exist in the other?

- A. Teacher
- **B. Betray**
- C. Species
- D. Grateful
- E. Resource
- F. Distort
- G. Express
- H. Open
- I. Directions
- J. Inspire

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

This question tests basic command-line skills, specifically using diff to compare text files, which is a common task in cybersecurity to detect differences or anomalies in configuration or log files.

The diff command outputs lines that are unique to either file or lines that differ between files. One would examine the output to see which of the listed words appear exclusively in one file.

According to GICSP principles in Cybersecurity Operations, understanding file comparison helps detect unauthorized changes or identify unique data in forensic investigations.

Based on typical file comparisons in such practical exams, the word "Betray" is often used as an example of a word present in one file but not in another, reflecting a critical difference.

NEW QUESTION # 42

Which control helps prevent threats to Integrity?

- A. Logging IDS alerts
- **B. Implementing digital signatures**
- C. Centralized LDAP authentication
- D. Firewall egress filtering

Answer: B

Explanation:

Integrity in cybersecurity ensures that data and systems are not altered or tampered with in an unauthorized manner. To protect integrity, controls must verify that data originates from a trusted source and has not been changed.

Digital signatures (D) provide cryptographic proof of data origin and integrity by enabling recipients to verify that the data has not been altered since it was signed.

Firewall egress filtering (A) limits outbound traffic but primarily protects confidentiality and availability, not directly integrity.

Logging IDS alerts (B) supports detection and auditing but is reactive rather than preventive.

Centralized LDAP authentication (C) manages user authentication and access control, mainly protecting confidentiality and accountability.

GICSP highlights digital signatures as a core control to maintain data integrity, especially for firmware, configuration files, and critical commands within ICS.

NEW QUESTION # 43

.....

Our brand has marched into the international market and many overseas clients purchase our GICSP exam dump online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our GICSP latest study question and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the GIAC exam dump and the experiences we accumulate for decades are incalculable. All of these lead to our success of GICSP learning file and high prestige.
