

# 3V0-24.25 Valid Test Duration & 3V0-24.25 Valid Test Tips

our 3V0-24.25 study materials will also save your time and energy in well-targeted learning as we are going to make everything done in order that you can stay focused in learning our 3V0-24.25 study materials without worries behind. We are so honored and pleased to be able to read our detailed introduction and we will try our best to enable you a better understanding of our 3V0-24.25 Study Materials better.

The price of Our 3V0-24.25 exam questions is affordable and we provide the wonderful service before and after the sale to let you have a good understanding of our 3V0-24.25 study materials before your purchase and convenient download procedures in case you want to have a check on the 3V0-24.25 test. We have free demo on the web for you to know the content of our 3V0-24.25 learning guide. Once you have a try on our 3V0-24.25 training prep, you will know that our 3V0-24.25 practice engine contains the most detailed information for your 3V0-24.25 exam.

>> 3V0-24.25 Valid Test Duration <<

## Top 3V0-24.25 Valid Test Duration | Reliable 3V0-24.25 Valid Test Tips: Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service

Do you want to pass your exam with the least time? Our 3V0-24.25 learning materials are high-quality, and you just need to spend 48 to 72 hours on learning, you can pass the exam successfully. What's more, free demo for 3V0-24.25 exam dumps is available, and you can have a try before buying, so that you can have a deeper understanding of what you are going to buy. If you fail to pass the exam by using 3V0-24.25 Exam Braindumps, we will give you full refund, and no other questions will be asked. We have online and offline chat service, and if you any questions for 3V0-24.25 training materials, you can have a conversation with us.

## VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q37-Q42):

### NEW QUESTION # 37

A VI Administrator wants to install the Velero Supervisor Service.

The administrator has downloaded the velero-service.yaml (Service Definition) from the VMware Marketplace.

What is the first step to make this service available for installation on a Supervisor Cluster?

- A. Create a vSphere Namespace named velero.
- B. Upload the Service Definition to vCenter Server via Workload Management > Services > Manage > Add New Service. This registers the service version globally in vCenter.
- C. Install the Velero plugin on the vCenter Appliance.
- D. Run kubectl apply -f velero-service.yaml on the Supervisor.

**Answer: B**

### NEW QUESTION # 38

A Cloud Administrator is investigating a report that a newly provisioned TKG cluster dev-cluster-01 is stuck in the Provisioning phase. The developer reports that kubectl get nodes returns no results.

The administrator runs kubectl describe tanzukubernetescluster dev-cluster-01 and sees the following status condition:

Status:

Conditions:

- Last Transition Time: "2023-11-20T14:30:00Z"

Message: "0/3 Control Plane Node(s) healthy. Error: vm-creation-failed" Reason: InfrastructureFailure Status: "False" Type: Ready

The administrator then checks the VirtualMachine resource for one of the control plane nodes:

Status:

Conditions:

- Message: "Failed to deploy VM: Resource pool 'Namespaces' has insufficient memory resources.

Required: 16384 MB, Available: 4096 MB."

Reason: ContentLibraryOvfDeployFailed

Status: "True"

Type: Failure

Based on this data, what are the verified cause of the issue and the correct resolution? (Choose 2.)

- A. The cause is that the vSphere Namespace containing the cluster has a Memory Limit configured that is too low to support the reservations required by the Control Plane VMs.
- B. The resolution is to increase the Memory Limit on the vSphere Namespace via the vSphere Client.
- C. The cause is that the ESXi hosts in the cluster are physically out of RAM.
- D. The resolution is to edit the TKG cluster YAML to use a smaller vmClass for the control plane nodes (e.g., best-effort-small instead of guaranteed-medium).
- E. The cause is a corrupted OVF image in the Content Library.

Answer: A,B

### NEW QUESTION # 39

A Cloud Architect is designing a disaster recovery plan for a mission-critical Zonal Supervisor deployment. The scenario involves a catastrophic failure of the Supervisor Cluster itself (e.g., corruption of the etcd database across all zones) during a failed upgrade, requiring a full restore.

Environment:

\* VKS workloads are backed up using Velero.

\* The Supervisor configuration (Namespaces, Policies) is backed up using the vCenter File-Based Backup.

What is the correct sequence of steps to restore service? (Select all that apply.)

- A. It is unnecessary to restore the Supervisor; simply redeploying a new Supervisor and pointing Velero to the object store will automatically recover the cluster infrastructure.
- B. Since the Supervisor state (etcd) is corrupted, the administrator must restore the Supervisor Cluster using the specific "Restore Supervisor" workflow (often involving the restore-supervisor.sh script or UI equivalent if available in the specific VCF version) which utilizes the backup data to reconstruct the Control Plane VMs.
- C. After the Supervisor is restored, use Velero to restore the TKG workloads (TanzuKubernetesClusters) into the restored Namespaces.
- D. Manually recreate all vSphere Namespaces and re-assign permissions before restoring workloads.
- E. Restore the vCenter Server from its file-based backup to recover the Supervisor's management context.

Answer: B,C,E

### NEW QUESTION # 40

A Cloud Administrator needs to prepare a VKS environment for a "Private Cloud" deployment where all Kubernetes nodes must pull their system images (e.g., kube-proxy, coredns, antrea) from a central Harbor Registry instead of the internet.

Review the configuration snippet for the TkgServiceConfiguration (the global TKG configuration object):

```
apiVersion: run.tanzu.vmware.com/v1alpha1
```

```
kind: TkgServiceConfiguration
```

```
metadata:
```

```
name: tkg-service-configuration
```

```
spec:
```

defaultCNI: antrea

...

trust:

additionalTrustedCAs:

- name: harbor-ca-cert

data: LS0tLS1... (Base64)

imageRepository:

host: harbor.corp.local

caCertificate: LS0tLS1... (Base64)

What is the effect of configuring the imageRepository field in this spec? (Select all that apply.)

- A. It instructs the Supervisor to rewrite the image manifests for system components (like CoreDNS) to point to harbor.corp.local instead of projects.registry.vmware.com
- B. It overrides the default upstream VMware registry location for all newly created TKG clusters.
- C. It configures the TKG worker nodes to trust the CA certificate of the Harbor registry.
- D. It automatically copies/replicates the images from VMware Public Registry to harbor.corp.local.
- E. It forces all user workloads (Pods) to use this registry by default.

**Answer: A,B,C**

#### NEW QUESTION # 41

How should an administrator enable autoscaling for a vSphere Kubernetes Service (VKS) cluster?

- A. Install the Cluster Autoscaler (standard package) for the cluster environment.
- B. Update the NodePool YAML to enable the autoscaling feature.
- C. Create a VKS cluster with autoscaler annotations.
- D. Create a NodePool with autoscaling enabled.

**Answer: A**

Explanation:

In VCF 9.0, cluster autoscaling is delivered as an optional capability that requires installing the Cluster Autoscaler as a standard package. The VCF 9.0 materials explicitly call out Cluster Autoscaler as an optionally installed package for vSphere Kubernetes Service, alongside other optional packages (for example, Harbor, Velero, Istio, etc.). The release information further emphasizes that autoscaling features (including newer behaviors such as scaling from/to zero for supported VKS versions) require that "the autoscaler standard package" be installed.

Operationally, installing the autoscaler package provides the controller that watches pending pods and node utilization signals and then drives the required changes in desired worker capacity. After that controller is present, you typically express scaling intent through the cluster's declarative configuration (for example, worker pool/node pool constraints and limits) so the autoscaler can act within the boundaries you define. Without the autoscaler package, changing replica counts or expecting automatic node growth/shrink will not produce autoscaling behavior because the control loop that performs those actions is missing.

#### NEW QUESTION # 42

.....

Some of our new customers will suppose that it will cost a few days to send them our 3V0-24.25 exam questions after their purchase. But in fact, only in 5 to 10 minutes after payment, you can use 3V0-24.25 preparation materials very fluently. We know you are very busy, so we will not waste any extra time. In this fast-paced society, you must cherish every minute. Using 3V0-24.25 training quiz is really your most efficient choice.

**3V0-24.25 Valid Test Tips:** <https://www.itcertmagic.com/VMware/real-3V0-24.25-exam-prep-dumps.html>

To suit your demands, our company has launched the Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service 3V0-24.25 exam materials especially for office workers. After the clients pay successfully for the 3V0-24.25 study materials they can immediately receive our products in the form of mails in 5-10 minutes and then click on the links to use our software to learn. And our 3V0-24.25 study materials have three formats which help you to read, test and study anytime, anywhere.

a handy utility lets you cut and copy, rename, search through, delete, Latest 3V0-24.25 Exam Cram and explore the properties of your Kindle's files and folders, This type of mentor need not be in the same organization.
