Huawei HCSA-Presales-Storage V4.0 Sample Questions (Q10-Q15):

NEW QUESTION # 10

What is the minimum number of disks for RAID 10?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

NEW QUESTION # 11

To support the NAS active-active function, the new-gen hybrid flash storage requires a NAS gateway.

- A. TRUE
- **B. FALSE**

Answer: B

Explanation:

This statement is false because Huawei's new-generation OceanStor hybrid flash storage features a converged (Unified) architecture that supports Native NAS capabilities directly within the storage controllers.

In older storage generations or with competitors, an external "NAS Gateway" or "Filer" was often required to provide file services on top of block storage.

Huawei's HyperMetro for NAS is a gateway-free active-active solution. The file systems are managed natively by the storage OS (OceanStor OS), allowing both SAN and NAS services to benefit from the same high-availability features. By eliminating the need for an external gateway, Huawei simplifies the network topology, reduces hardware costs (TCO), and minimizes latency by removing an extra processing hop for file data. This native integration allows for seamless cross-site active-active deployments for file protocols like CIFS/SMB and NFS, just as it does for block protocols.

NEW QUESTION # 12

How many faulty nodes can OceanStor Pacific tolerate at most?

- **A. 3 nodes**
- B. 1 node
- C. 2 nodes
- D. 4 nodes

Answer: A

Explanation:

OceanStor Pacific uses 4-1 erasure coding by default, allowing up to 3 faulty nodes while still maintaining data availability.

NEW QUESTION # 13

Which of the following components are included in a complete NAS system? (Choose all that apply.)

- A. IP switch
- B. DNS and AD/LDAP servers
- C. NAS client

Explanation:

A complete NAS (Network Attached Storage) system includes the NAS client (user or application accessing storage), an IP switch (for network connectivity), DNS and AD/LDAP servers (for name resolution and authentication), and NAS storage (the storage device itself). All these components work together to provide efficient, accessible, and secure file sharing over the network.
