

Oracle 1Z0-1151-25 Exam Software Makes Preparation Evaluation Easier

2025 Latest 2Pass4sure 1Z0-1151-25 PDF Dumps and 1Z0-1151-25 Exam Engine Free Share: https://drive.google.com/open?id=1_ImXaTxISPaxHQ3KA8IboFzZHKrPpfuw

Our 1Z0-1151-25 preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to help the candidates to pass the 1Z0-1151-25 exam. Most of the experts have been studying in the professional field for many years and have accumulated much experience in our 1Z0-1151-25 Practice Questions. Our company is considerably cautious in the selection of talent and always hires employees with store of specialized knowledge and skills to help you get the dreaming 1Z0-1151-25 certification.

It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal. With the 1Z0-1151-25 test guide use feedback, it has 98%-100% pass rate. That's the truth from our customers. And it is easy to use for you only with 20 hours' to 30 hours' practice. After using the 1Z0-1151-25 Test Guide, you will have the almost 100% assurance to take part in an examination. With high quality materials and practices, you will get easier to pass the exam.

1Z0-1151-25 High Quality | 1Z0-1151-25 Latest Test Discount

1Z0-1151-25 exam dumps are famous for high-quality, since we have a professional team to collect and research the first-hand information. We have reliable channel to ensure you that 1Z0-1151-25 exam braindumps you receive is the latest information of the exam. We are strict with the quality and answers of 1Z0-1151-25 Exam Materials, we can guarantee you that what you receive are the best and most effective. In addition, online and offline chat service stuff are available, and if you have any questions for 1Z0-1151-25 exam dumps, you can consult us.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.

Topic 2	<ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 3	<ul style="list-style-type: none"> • Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 4	<ul style="list-style-type: none"> • Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.
Topic 5	<ul style="list-style-type: none"> • Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q21-Q26):

NEW QUESTION # 21

What is the primary difference between using Oracle FastConnect with an Oracle partner and using FastConnect with colocation with Oracle?

- A. The geographical locations available for connections
- B. The number of available redundancy models
- **C. The method of establishing the physical connection to Oracle Cloud Infrastructure**
- D. The type of virtual circuits supported

Answer: C

Explanation:

FastConnect with an Oracle partner uses a third-party network to connect to OCI, while colocation with Oracle involves a direct physical connection at an OCI data center. The difference lies in the physical connection method, not locations (Option A), redundancy (Option B), or circuits (Option C). Oracle's FastConnect documentation outlines these deployment models.

NEW QUESTION # 22

What does Oracle Base Database Service use in Oracle Cloud Infrastructure to provide high availability and disaster recovery?

- A. Geography
- B. Availability zone
- C. Availability set
- **D. Availability domains and fault domains**

Answer: D

Explanation:

The Oracle Base Database Service in OCI leverages Availability Domains (ADs) and Fault Domains (FDs) to ensure high availability (HA) and disaster recovery (DR). ADs are isolated data centers within a region, preventing single points of failure, while

FDs are subdivisions within an AD, further isolating hardware for redundancy. Availability Sets and Zones (Options A and B) are Azure-specific terms, and Geography (Option C) is too vague. OCI's architecture documentation confirms ADs and FDs as the foundation for HA/DR in database services.

NEW QUESTION # 23

Which statement accurately describes Oracle Database@Google Cloud?

- A. It is only accessible via public internet connections.
- B. It excludes Autonomous Database features.
- C. It requires complex cross-cloud network configuration for access.
- **D. It allows customers to run OCI-native Oracle database services within Google Cloud data centers.**

Answer: D

Explanation:

Oracle Database@Google Cloud enables customers to run OCI-native database services (e.g., Autonomous Database) within Google Cloud data centers, simplifying multicloud management via GCP tools. Option A overcomplicates the integrated setup, Option C contradicts the private interconnect, and Option D is false-Autonomous Database is included. Oracle's June 2024 partnership announcement confirms this design.

NEW QUESTION # 24

What is the role of a Dynamic Routing Gateway (DRG) in an OCI VCN?

- A. To provide internet connectivity for instances within the VCN.
- B. To establish secure connections between VCNs in the same region.
- C. To provide access to Oracle services, such as Object Storage, without traversing the public internet.
- **D. To connect the VCN to networks outside of OCI, such as on-premises networks via FastConnect or VPN Connect, or to other VCNs in different regions.**

Answer: D

Explanation:

C). To connect the VCN to networks outside of OCI, such as on-premises networks via FastConnect or VPN Connect, or to other VCNs in different regions.

Here's a breakdown of the role of a Dynamic Routing Gateway (DRG) in OCI:

Connectivity to External Networks: The primary function of a DRG is to provide connectivity between your VCN and networks outside of OCI. This includes:

On-premises networks: You can establish a private connection between your on-premises data center and your OCI VCN using FastConnect (dedicated private line) or VPN Connect (IPSec VPN). The DRG acts as the termination point for these connections on the OCI side.

Other VCNs (in different regions or tenancies): You can use a DRG to create connections between VCNs in different OCI regions or even in different OCI tenancies. This enables you to build complex multi-region or multi-tenant network architectures.

Why other options are incorrect:

A). To provide internet connectivity for instances within the VCN: Internet connectivity is provided by an Internet Gateway, not a DRG.

B). To establish secure connections between VCNs in the same region: While a DRG can be used for connections between VCNs in the same region, it's not its primary purpose. Local VCN peering is generally used for this scenario as it offers lower latency and is simpler to configure.

D). To provide access to Oracle services, such as Object Storage, without traversing the public internet: Access to Oracle services without traversing the public internet is provided by a Service Gateway, not a DRG.

NEW QUESTION # 25

Which of the following resources is configured primarily within the Google Cloud console during the Oracle Database@Google Cloud onboarding process?

- A. Oracle Exadata VM Cluster
- **B. Google Cloud Partner Interconnect attachment**

- Answer: B**

Oracle Cloud Infrastructure Dynamic Routing Gateway (DRG): Configured and managed within the OCI console to handle routing between the VCN and the FastConnect connection.
