## **New Microsoft AZ-500 Test Test | Reliable AZ-500 Braindumps Book**

There is plenty of skilled and motivated staff to help you obtain the Microsoft Azure Security Technologies exam certificate that you are looking forward. We have faith in our professional team and our AZ-500 Study Tool, and we also wish you trust us wholeheartedly. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the Microsoft Azure Security Technologies exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the Microsoft Azure Security Technologies exam.

Microsoft AZ-500 certification exam covers various security topics, such as securing data and applications, managing identity and access, implementing platform protection, and managing security operations. AZ-500 exam is intended to assess your knowledge and expertise in implementing security controls and managing security operations in the Azure environment. AZ-500 exam consists of multiple-choice questions, and you will have three hours to complete it. To pass the exam, you need to score at least 700 out of

1000.

Passing the Microsoft AZ-500 Exam is a great way to demonstrate your expertise in securing Microsoft Azure cloud services. Microsoft Azure Security Technologies certification can help you advance your career in cloud security and increase your value to your organization. With the growing demand for cloud security professionals, obtaining the Microsoft AZ-500 certification can open up many job opportunities in the field of cloud security.

## Microsoft Azure Security Technologies Sample Questions (Q235-Q240):

### NEW QUESTION # 235

You have an Azure subscription that contains an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains the users shown in the following table.

Name	Subscription role	Azure AD user role
User1	Owner	None
User2	Contributor	None
User3	Security Admin	None
User4	None	Service administrator

You create a resource group named RG1.

Which users can modify the permissions for RG1 and which users can create virtual networks in RG1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Users who can modify the permissions for RG1:

- User1 only
- User1 and User2 only
- User1 and User3 only
- User1, User2 and User3 only
- User1, User2, User3, and User4

Users who can create virtual networks in RG1:

- User1 only
- User1 and User2 only
- User1 and User3 only
- User1, User2 and User3 only
- User1, User2, User3, and User4

**Answer:**

**Explanation:**

Users who can modify the permissions for RG1:

- User1 only
- User1 and User2 only
- User1 and User3 only
- User1, User2 and User3 only
- User1, User2, User3, and User4

Users who can create virtual networks in RG1:

- User1 only
- User1 and User2 only
- User1 and User3 only
- User1, User2 and User3 only
- User1, User2, User3, and User4

**NEW QUESTION # 236**

You have an Azure subscription that contains 100 virtual machines. Azure Diagnostics is enabled on all the virtual machines. You are planning the monitoring of Azure services in the subscription.

You need to retrieve the following details:

- \* Identify the user who deleted a virtual machine three weeks ago.
- \* Query the security events of a virtual machine that runs Windows Server 2016.

What should you use in Azure Monitor? To answer, drag the appropriate configuration settings to the correct details. Each configuration setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Settings**

**Answer Area**

- Activity log
- Logs
- Metrics
- Service Health

Identify the user who deleted a virtual machine three weeks ago:

Query the security events of a virtual machine that runs Windows Server 2016:

**Answer:**

Explanation:

The screenshot shows the 'Settings' and 'Answer Area' panes. The 'Settings' pane contains 'Activity log', 'Logs', 'Metrics', and 'Service Health'. The 'Answer Area' contains two questions. The first question, 'Identify the user who deleted a virtual machine three weeks ago:', has 'Activity log' dragged to its answer box. The second question, 'Query the security events of a virtual machine that runs Windows Server 2016:', has 'Logs' dragged to its answer box.

Explanation

Identify the user who deleted a virtual machine three weeks ago:

Activity log

Query the security events of a virtual machine that runs Windows Server 2016:

Logs

Box1: Activity log

Azure activity logs provide insight into the operations that were performed on resources in your subscription.

Activity logs were previously known as "audit logs" or "operational logs," because they report control-plane events for your subscriptions.

Activity logs help you determine the "what, who, and when" for write operations (that is, PUT, POST, or DELETE).

Box 2: Logs

Log Integration collects Azure diagnostics from your Windows virtual machines, Azure activity logs, Azure Security Center alerts, and Azure resource provider logs. This integration provides a unified dashboard for all your assets, whether they're on-premises or in the cloud, so that you can aggregate, correlate, analyze, and alert for security events.

### NEW QUESTION # 237

You are configuring just in time (JIT) VM access to a set of Azure virtual machines.

You need to grant users PowerShell access to the virtual machine by using JIT VM access.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

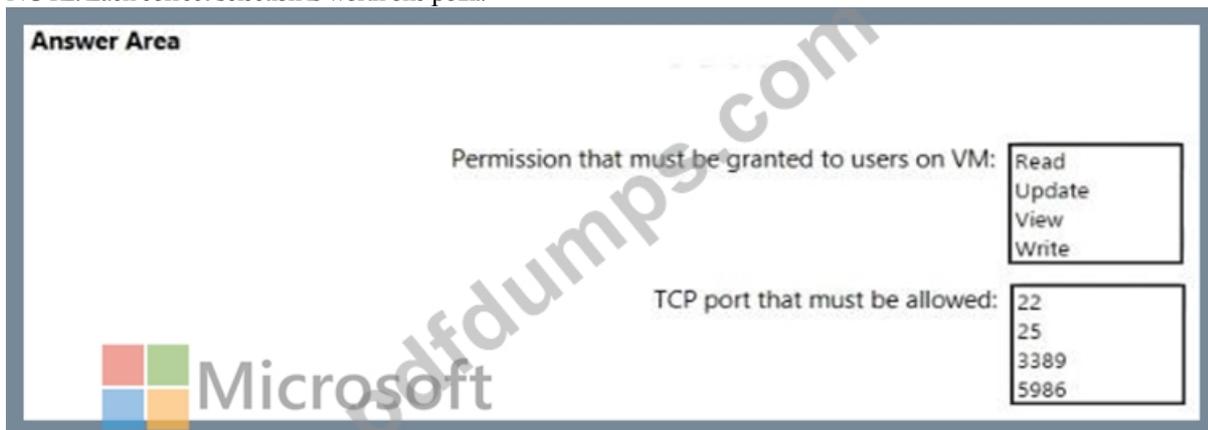

**Answer Area**

Permission that must be granted to users on VM:

Read
Update
View
Write

TCP port that must be allowed:

22
25
3389
5986

**Answer:**

Explanation:

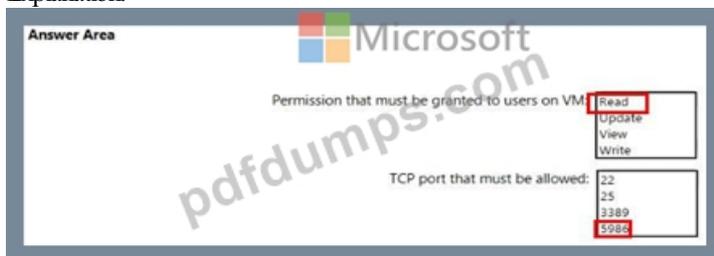

**Answer Area**

Permission that must be granted to users on VM:

Read
Update
View
Write

TCP port that must be allowed:

22
25
3389
5986

### NEW QUESTION # 238

You have an Azure subscription that contains a user named Admin1 and a resource group named RG1.

In Azure Monitor, you create the alert rules shown in the following table.

Name	Resource	Condition
Rule1	RG1	All security operations
Rule2	RG1	All administrative operations
Rule3	Azure subscription	All security operations by Admin1
Rule4	Azure subscription	All administrative operations by Admin1

Admin1 performs the following actions on RG1:

Adds a virtual network named VNET1

Adds a Delete lock named Lock1

Which rules will trigger an alert as a result of the actions of Admin1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Adding VNET1:

- Rule2 only
- Rule4 only
- Rule2 and Rule 4 only
- Rule3 and Rule 4 only
- Rule1, Rule2, Rule3 and Rule 4

Adding Lock1:

- Rule2 only
- Rule4 only
- Rule2 and Rule 4 only
- Rule3 and Rule 4 only
- Rule1, Rule2, Rule3 and Rule 4

**Answer:**

Explanation:

Adding VNET1:

- Rule2 only
- Rule4 only
- Rule2 and Rule 4 only**
- Rule3 and Rule 4 only
- Rule1, Rule2, Rule3 and Rule 4

Adding Lock1:

- Rule2 only
- Rule4 only
- Rule2 and Rule 4 only**
- Rule3 and Rule 4 only
- Rule1, Rule2, Rule3 and Rule 4

**NEW QUESTION # 239**

You have an Azure subscription that contains the resources shown in the following table.
