Valid Study NSE8_812 Questions - Reliable NSE8_812 Dumps Ppt

The TestInsides believes in customer satisfaction and strives hard to make the entire certification Fortinet NSE8_812 exam journey the easiest and most successful. To meet this goal the TestInsides is offering the real, updated, and error-free Fortinet NSE 8 - Written Exam (NSE8_812) (NSE8_812) Questions in three different but easy-to-use formats. These TestInsides NSE8_812 exam questions formats are web-based practice test software, desktop practice test software and Fortinet NSE 8 - Written Exam (NSE8_812) (NSE8_812) PDF dumps files.

Fortinet NSE8_812 Certification Exam is designed to test the skills and knowledge of network security professionals who are looking to advance their careers to the next level. Fortinet NSE 8 - Written Exam (NSE8_812) certification is part of the Fortinet Network Security Expert (NSE) program, which is a comprehensive training and certification program that covers all aspects of network security. The NSE8_812 Exam focuses on the advanced skills required to design, implement, and manage complex network security solutions using Fortinet products.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q17-Q22):

NEW QUESTION # 17

Refer to the exhibit.

You need to create a base SD-WAN configuration that includes SD-WAN rules and Performance SLAs for spoke sites with various connectivity types. It needs to be done in a way that can be easily applied to new sites with a minimum amount of change. How should you create the SD-WAN zones?

- A. With members without interface assignments
- **B. With members and assign overlay interfaces**
- C. With no members configured
- D. With members and assign interfaces but do not specify a gateway

Answer: B

NEW QUESTION # 18

Refer to the exhibit.

A customer is trying to setup a Playbook automation using a FortiAnalyzer, FortiWeb and FortiGate. The intention is to have the FortiGate quarantine any source of SQL Injection detected by the FortiWeb. They got the automation stitch to trigger on the FortiGate when simulating an attack to their website, but the quarantine object was created with the IP 0.0.0.0. Referring to the configuration and logs in the exhibits, which two statements are true? (Choose two.)

- A. To fix the issue the parameter for script on the Playbook configuration should be epip.
- **B. The Group By option in the handler should be different to src, so src can be used on the Playbook configuration.**
- C. To diagnose this issue, you need to use the command diagnose test application oftpd 22.
- **D. The FortiAnalyzer ADOM Type must be Fabric.**
- E. FortiSOC Playbooks combining FortiWeb and FortiGate are not supported.

Answer: B,D

NEW QUESTION # 19

Refer to the exhibit, which shows a FortiGate configuration snippet.

A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the internet using a public IP from that country. They would like to enable the SD-WAN rule using a webhook.

Which configuration must be added to the FortiGate, and which type of HTTP request must be used to accomplish this? (Choose two.)

- **A.**
- **B.**
- **C.**
- **D.**

Answer: A,D

NEW QUESTION # 20

What is the benefit of using FortiGate NAC LAN Segments?

- A. It provides physical isolation without changing the IP address of hosts.
- B. It provides support for multiple DHCP servers within the same VLAN.
- C. It provides support for IGMP snooping between hosts within the same VLAN
- **D. It allows for assignment of dynamic address objects matching NAC policy.**

Answer: D

Explanation:

FortiGate NAC LAN Segments are a feature that allows users to assign different VLANs to different LAN segments without changing the IP address of hosts or bouncing the switch port. This provides physical isolation while maintaining firewall sessions and avoiding DHCP issues. One benefit of using FortiGate NAC LAN Segments is that it allows for assignment of dynamic address objects matching NAC policy. This means that users can create firewall policies based on dynamic address objects that match the NAC policy criteria, such as device type, OS type, MAC address, etc. This simplifies firewall policy management and enhances security by applying different security profiles to different types of devices. References:

<https://docs.fortinet.com/document/fortigate/7.0.0/new-features/856212/nac-lan-segments-7-0-1>

NEW QUESTION # 21

Refer to the exhibits.

An administrator has configured a FortiGate and Forti Authenticator for two-factor authentication with FortiToken push notifications for their SSL VPN login. Upon initial review of the setup, the administrator has discovered that the customers can manually type in their two-factor code and authenticate but push notifications do not work Based on the information given in the exhibits, what must

be done to fix this?

- A. On FG-1 port1, the fm access protocol must be enabled.
- B. On FG-1 CLI, the fm-push server setting must point to 100.64.141.
- C. On FAC-1, the FortiToken public IP setting must point to 100.64.1 41
- **D. FAC-1 must have an internet routable IP address for push notifications.**

Answer: D

Explanation:

FortiToken push notifications require that the FortiAuthenticator has an internet routable IP address. This is because the FortiAuthenticator uses this IP address to send push notifications to the FortiGate.

The other options are not correct. Enabling the fm access protocol on FG-1 port1 is not necessary for push notifications to work. The fm-push server setting on FG-1 CLI should already point to the FortiAuthenticator's IP address. The FortiToken public IP setting on FAC-1 is not relevant to push notifications.

Here is a table that summarizes the different options:
