## Medical Technology AMCA Phlebotomy Technician Certification Exam

## Sample Questions (Q183-Q188):

### NEW QUESTION # 183

When collecting a specimen from a patient in a long-term-care facility, the first thing the phlebotomist should do is to:

- A. Contact the patient prior to arrival.
- **B. Check in at the nursing station.**
- C. Enter the patient's room.
- D. Knock on the patient's door.

**Answer: B**

Explanation:

When collecting a specimen from a patient in a long-term-care facility, the first thing that the phlebotomist should do is to check in at the nursing station. The phlebotomist needs to ask for information about any special concerns regarding the patient, such as the need for assistance if the patient is confused or any type of restriction that applies to the patient. As in any other setting, the phlebotomist should always knock on the door or announce his or her arrival before entering the room and explain the purpose of the visit.

### NEW QUESTION # 184

Which of the following billing code systems is used for laboratory testing for inpatients?

- A. CPT
- B. ICD-10-CM
- C. ICD-11
- **D. ICD-10-PCS**

**Answer: D**

Explanation:

The billing code system that is used for laboratory testing for inpatients is ICD-10-PCS (International Classification of Diseases, 10th Revision, Procedure Coding System). It is used to report and bill procedures while patients are hospitalized. Outpatient procedures, on the other hand, are billed using CPT (Current Procedural Terminology) codes. ICD-11 (International Classification of Diseases, 11th Revision) is the latest code system for diagnoses, but it has yet to be adopted in the US. The ICD-10-CM (International Classification of Diseases, 10th Revision, Clinical Modification) is still the coding system used in the US for documenting a diagnosis.

### NEW QUESTION # 185

The PNS is composed of:

- A. CNS
- B. Spinal cord
- **C. Cranial nerves**
- D. Optic nerves

**Answer: C**

Explanation:

The peripheral nervous system (PNS) is located outside of the central nervous system (CNS) and is composed of the cranial nerves (except the optic nerve), the spinal nerves, and the autonomic nervous system. The spinal cord and brain (and the optic nerve) make up the CNS.

### NEW QUESTION # 186

Separated serum or plasma specimens should be maintained at room temperature for no more than:

- **A. 2 hours**
- B. 6 hours
- C. 8 hours
- D. 4 hours

**Answer: A**

Explanation:

Separated serum or plasma specimens should be maintained at room temperature for no more than 2 hours. This maximum time limit is used because it complies with the requirements for numerous tests, including glucose, lactate dehydrogenase, catecholamines, lactic acid, and potassium. Processing a specimen within this time frame prevents further metabolic changes, such as glycolysis, that may affect the test results.

#### **NEW QUESTION # 187**

If a physician has ordered venipuncture for blood C&S, CBC, and BMP for an adult patient, what is the correct order of draw (first to last)?

- A. BMP,C&S,BMP
- B. CBC, BMP,C&S
- **C. C&S, BMP, CBC**
- D. C&S, CBC, BMP

**Answer: C**

Explanation:

If a physician has ordered venipuncture for blood C&S (culture and sensitivity), CBC (complete blood count), and BMP (basic metabolic panel) for an adult patient, the correct order of draw is:

1. C&S, so that the specimen remains sterile and not contaminated by additives
2. BMP, which can be performed on plasma or serum
3. CBC, which requires whole blood for testing

#### **NEW QUESTION # 188**

.....

Many candidates find the AMCA Phlebotomy Technician Certification Exam (PTC-AMCA) exam preparation difficult.
