### NEW QUESTION # 124

Your application requires service accounts to be authenticated to GCP products via credentials stored on its host Compute Engine virtual machine instances. You want to distribute these credentials to the host instances as securely as possible.

What should you do?

- A. Generate a P12 file from the GCP Console after the instance is deployed, and copy the credentials to the host instance before starting the application.
- B. Commit the credential JSON file into your application's source repository, and have your CI/CD process package it with the software that is deployed to the instance.
- C. Use the instance's service account Application Default Credentials to authenticate to the required resources.
- D. Use HTTP signed URLs to securely provide access to the required resources.

**Answer: C**

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/api/how-tos/authorization>

### NEW QUESTION # 125

You are deploying your application to a Compute Engine virtual machine instance with the Stackdriver Monitoring Agent installed.

Your application is a unix process on the instance. You want to be alerted if the unix process has not run for at least 5 minutes. You are not able to change the application to generate metrics or logs.

Which alert condition should you configure?

- A. Process health
- B. Uptime check

- C. Metric absence
- D. Metric threshold

**Answer: A**

Explanation:
