

Reliable CrowdStrike CCCS-203b Test Syllabus | Exam CCCS-203b Training

What's more, part of that DumpTorrent CCCS-203b dumps now are free: https://drive.google.com/open?id=1iV5JyURapJSpINy7XXqjB6oaV68bQ7_u

CrowdStrike CCCS-203b exam include all the important concepts leaving behind the stories to tell for some other time. For the complete and quick CrowdStrike CCCS-203b preparation the CrowdStrike CCCS-203b Exam Questions are the best study material. With CrowdStrike CCCS-203b Exam Practice test questions you can ace your CrowdStrike CCCS-203b exam preparation simply and quickly to pass the final CCCS-203b exam easily.

The DumpTorrent CrowdStrike Certified Cloud Specialist (CCCS-203b) PDF format of questions is user-friendly, portable, and printable that's easy to use on smartphones, laptops, and tablets. This way, you can prepare for the CCCS-203b test anywhere without time restrictions. For those who prefer a traditional reading experience, DumpTorrent CrowdStrike Certified Cloud Specialist (CCCS-203b) PDF questions also provides the option to print the CCCS-203b questions, and read it in a convenient paper format. This flexibility empowers CCCS-203b candidates to study anywhere and anytime, adapting to their individual preferences and schedules.

Accurate CCCS-203b – 100% Free Reliable Test Syllabus | Exam CCCS-203b Training

Based on the credibility in this industry, our CCCS-203b study braindumps have occupied a relatively larger market share and stable sources of customers. Such a startling figure --99% pass rate is not common in this field, but we have made it with our endless efforts. The system of CCCS-203b Test Guide will keep track of your learning progress in the whole course. Therefore, you can have 100% confidence in our CCCS-203b exam guide. And you can have a try on our CCCS-203b exam questions as long as you free download the demo.

CrowdStrike CCCS-203b Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cloud Security Policies and Rules: This domain addresses configuring CSPM policies, image assessment policies, Kubernetes admission controller policies, and runtime sensor policies based on specific use cases.

Topic 2	<ul style="list-style-type: none"> • Runtime Protection: This domain focuses on selecting appropriate Falcon sensors for Kubernetes environments, troubleshooting deployments, and identifying misconfigurations, unassessed images, IOAs, rogue containers, drift, and network connections.
Topic 3	<ul style="list-style-type: none"> • Findings and Detection Analysis: This domain covers evaluating security controls to identify IOMs, vulnerabilities, suspicious activity, and persistence mechanisms, auditing user permissions, comparing configurations to benchmarks, and discovering unmanaged public-facing assets.
Topic 4	<ul style="list-style-type: none"> • Remediating and Reporting Issues: This domain addresses identifying remediation steps for findings, using scheduled reports for cloud security, and utilizing Falcon Fusion SOAR workflows for automated notifications.
Topic 5	<ul style="list-style-type: none"> • Cloud Account Registration: This domain focuses on selecting secure registration methods for cloud environments, understanding required roles, organizing resources into cloud groups, configuring scan exclusions, and troubleshooting registration issues.

CrowdStrike Certified Cloud Specialist Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are setting up CrowdStrike to assess images in your container registry. What is the first step to establish a connection for image scanning?

- A. Configure an API key in the CrowdStrike Falcon console and provide it to the image registry.
- B. Enable CrowdStrike image scanning through the cloud provider's default security settings.
- **C. Register the image registry's credentials in the CrowdStrike Falcon console.**
- D. Enable automatic image scanning in the image registry without additional configuration.

Answer: C

Explanation:

Option A: Cloud provider default settings don't automatically support CrowdStrike integration. You need to explicitly configure and register the registry with CrowdStrike.

Option B: While API keys may be used for other integrations, the process of registering a connection involves providing the registry's credentials to CrowdStrike, not the other way around.

Option C: Automatic image scanning by the registry itself doesn't integrate with CrowdStrike. You must explicitly connect the registry to CrowdStrike for its scanning capabilities to be utilized.

Option D: To establish a connection for image scanning, you need to register the image registry in the CrowdStrike Falcon console. This involves providing the registry's credentials and configuration details, enabling CrowdStrike to access and scan images securely. This step establishes trust and ensures compatibility between the registry and CrowdStrike.

NEW QUESTION # 24

A financial services company needs to register multiple cloud accounts while adhering to strict compliance regulations such as SOC 2, GDPR, and HIPAA. The company must ensure that the cloud account registration method provides strong access controls, auditability, and compliance tracking.

Which of the following is the best approach?

- A. Allow developers to register their cloud accounts independently with no oversight to speed up onboarding.
- **B. Use an automated cloud registration workflow integrated with identity and access management (IAM) policies.**
- C. Register each cloud account using an administrator's personal access credentials.
- D. Use a shared service account with a single set of credentials for registering all cloud accounts.

Answer: B

Explanation:

Option A: Allowing developers to register cloud accounts without oversight creates a shadow IT problem, making it difficult to enforce security policies and track compliance. Unauthorized or improperly registered accounts may violate regulatory requirements.

Option B: Using a shared service account violates least privilege principles and creates compliance risks. If the shared credentials are compromised, multiple accounts could be affected, and it becomes difficult to track individual actions for compliance audits.

Option C: Using an administrator's personal credentials introduces security and compliance risks.

If the administrator leaves the company or their credentials are compromised, it could affect multiple cloud accounts, violating least privilege access principles.

Option D: An automated cloud registration workflow with IAM integration ensures security, auditability, and compliance tracking. IAM policies enforce access controls, ensuring that only authorized users and services can register accounts while maintaining compliance with regulations.

NEW QUESTION # 25

How does CrowdStrike's Application Security Posture Management (ASPM) enhance container security?

- A. By identifying and fixing insecure configurations in code before deployment
- B. By enforcing MFA on cloud users
- C. By scanning deployed pods
- D. By deploying agentless runtime protection

Answer: A

NEW QUESTION # 26

Which of the following steps is required to successfully integrate the Falcon CWPP Image Scanning Script with a CI/CD pipeline for image assessment?

- A. Modify the pipeline script to execute the Image Scanning Script during the post-deployment phase.
- B. Schedule the script to run daily on the production environment's container images.
- C. Use the Falcon API to fetch a unique API token and store it in the pipeline configuration file.
- D. Install the Falcon CWPP agent on all developer machines.

Answer: C

Explanation:

Option A: Image scanning should occur before deployment to identify vulnerabilities early in the development lifecycle. Running the script post-deployment defeats the purpose of proactive security measures.

Option B: While the Falcon CWPP agent is part of the larger CrowdStrike solution, it is not required for the Image Scanning Script's integration into a CI/CD pipeline. The scanning process is executed during pipeline stages and doesn't depend on agents on developer machines.

Option C: Image assessments should be part of the CI/CD pipeline to detect vulnerabilities during development. Running scans on production images introduces unnecessary risk and is not the intended use case of the Image Scanning Script.

Option D: To authenticate the Image Scanning Script with the Falcon platform, a unique API token is required. This token allows secure communication between the CI/CD pipeline and the Falcon API, enabling image assessments to occur seamlessly. Failure to include this step results in authentication issues, causing the script to fail.

NEW QUESTION # 27

An organization operates in a multi-cloud environment with workloads in AWS, Azure, and Google Cloud Platform (GCP). They want to register all their cloud accounts with CrowdStrike Falcon Cloud for unified security monitoring.

Which of the following statements is true regarding the registration process?

- A. Each cloud provider requires a separate integration process within the Falcon Console, as there is no universal method for cloud registration.
- B. Once an AWS account is registered, Azure and GCP accounts are automatically detected and onboarded by CrowdStrike Falcon.
- C. Only AWS accounts can be registered with CrowdStrike Falcon; Azure and GCP require separate security tools.
- D. Registering multiple cloud accounts requires deploying a Falcon Container Sensor in each provider before registration.

Answer: A

Explanation:

Option A: Falcon does not automatically detect and register accounts from other cloud providers.

Each provider must be onboarded separately using their respective integration method.

Option B: Falcon Container Sensors are used for container security but are not required for cloud account registration. Registration

focuses on integrating cloud provider APIs for monitoring.

Option C: CrowdStrike Falcon supports AWS, Azure, and GCP. While integration steps differ, Falcon provides security visibility across all three major cloud providers.

Option D: Cloud service providers (AWS, Azure, GCP) have different security models and IAM permission structures, requiring distinct integration processes within the Falcon Console. Each provider's registration process involves granting specific permissions to allow Falcon to monitor workloads and resources effectively.

NEW QUESTION # 28

.....

DumpTorrent gives a guarantee to our customers that they can pass the CrowdStrike CCCS-203b Certification Exam on the first try by preparing from the DumpTorrent and if they fail to pass it despite their efforts they can claim their payment back as per terms and conditions. DumpTorrent facilitates customers with a 24/7 support system which means whenever they get stuck somewhere they don't struggle and contact the support system which will assist them in the right way. A lot of students have prepared from practice material and rated it positively.
