And our F5CAB4 training questions are popular in the market. We believe you will make the right choice.

## F5 BIG-IP Administration Control Plane Administration Sample Questions (Q66-Q71):

### NEW QUESTION # 66

A BIG-IP Administrator is unable to connect to the management interface via HTTPS. What is a possible reason for this issue?

- A. An incorrect management route is specified.
- B. The IP address of the device used to access the management interface is NOT included in the "P Allow" list in the Configuration Utility.
- C. The port lockdown setting is configured to Allow None.
- D. The IP address of the device used to access the management interface is NOT included in the "httpd Allow" list in the CLI.

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Management connectivity is protected by an allowed access list for the httpd daemon. Unlike TMM data ports which use 'Port Lockdown' settings, the management port's access is controlled by a specific 'Allow' list323232. If an administrator's IP is not explicitly included in this list, the Control Plane will reject HTTPS connection attempts to the management utility33.

### NEW QUESTION # 67

A BIG-IP Administrator makes a configuration change to the BIG-IP device. Which file logs the message regarding the configuration change?

- A. /var/log/messages
- B. /var/log/audit
- C. /var/log/user.log
- D. /var/log/secure

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Audit logging is a specialized feature within TMOS designed to track administrative actions. According to F5 documentation, whenever a system object (like a virtual server, pool, or profile) is created, modified, or deleted, the system records the event. These logs are stored specifically in /var/log/audit. This is essential for control plane administration to track "who did what and when" regarding the device configuration.

### NEW QUESTION # 68

The BIG-IP Administrator generates a qkview using "qkview -s0" and needs to transfer the output file via SCP. Which directory contains the output file?

- A. /var/local
- B. /var/log
- C. /var/config
- D. /var/tmp

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: A QKView is a comprehensive snapshot of the device's Control Plane state, configuration, and logs used for troubleshooting. By default, the qkview utility stores its generated output file in the /var/tmp/ directory. Administrators must know this path to retrieve the file for upload to F5 iHealth or Support.

### NEW QUESTION # 69

A BIG-IP Administrator needs to find which modules have been licensed for use on the BIG-IP system. In which section of the

Configuration Utility can the BIG-IP Administrator find this information?

- A. System> Platform
- B. System> Services
- **C. System> Resource Provisioning**
- D. System> Support

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Identifying the current device status includes knowing which software modules (such as LTM, ASM, or APM) are active and how much hardware resource (CPU/Memory) is allocated to them. The System> Resource Provisioning screen displays the licensing status and allows the administrator to set the provisioning level (Nominal, Dedicated, or Minimum) for each module.

#### **NEW QUESTION # 70**

A BIG-IP device sends out the following SNMP trap: big-ipo.f5.com - bigipExternalLinkChange Link: 1.0 is DOWN. Where in the BIG-IP Configuration utility should the BIG-IP Administrator verify the current status of Link 1.0?

- A. System> Platform
- B. Network > Trunks > Trunk List
- C. Statistics > Performance > System
- **D. Network > Interfaces > Interface List**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Monitoring the physical status of the device is critical for reporting device health. In F5 nomenclature, "1.0", "1.1", etc., represent physical hardware interfaces. To verify if a physical link is up or down as reported by the Control Plane's SNMP agent, the administrator must check the Interface List located under Network > Interfaces

#### **NEW QUESTION # 71**

.....

Our F5CAB4 test guide keep pace with contemporary talent development and makes every learner fit in the needs of the society. There is no doubt that our F5CAB4 latest question can be your first choice for your relevant knowledge accumulation and ability enhancement. Moreover, F5CAB4 exam questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the F5CAB4 Exam with our F5CAB4 latest question successfully has been given priority to our agenda.

**F5CAB4 Test Discount:** <https://www.actualtests4sure.com/F5CAB4-test-questions.html>
