Pass Guaranteed Quiz 2026 JN0-232: Valid Reliable Security, Associate (JNCIA-SEC) Exam Topics

The research and production of our JN0-232 study materials are undertaken by our first-tier expert team. The clients can have a

free download and tryout of our JN0-232 study materials before they decide to buy our products. They can use our products immediately after they pay for the JN0-232 study materials successfully. If the clients are unlucky to fail in the test we will refund them as quickly as we can. There are so many advantages of our products that we can't summarize them with several simple words. You'd better look at the introduction of our JN0-232 Study Materials in detail as follow by yourselves.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q58-Q63):

NEW QUESTION # 58

Which two statements about SRX Series zones are correct? (Choose two.)

- A. The null zone allows the use of security policies to log dropped control plane traffic.
- B. The Junos-host zone allows the use of security policies to control access to the SRX Series Firewall.
- C. The functional zone is used to define the management interface on smaller SRX Series Firewalls.
- D. A security zone processes intra-zone traffic without a security policy.

Answer: B,D

Explanation:

* Intra-zone traffic: On SRX devices, traffic between interfaces in the same security zone is allowed without requiring a security policy (Option C is correct). Policies are only evaluated for inter-zone traffic.

* Junos-host functional zone: This zone is a predefined functional zone that allows administrators to apply policies controlling access to the SRX firewall itself, such as SSH, HTTP, or SNMP traffic (Option D is correct).

* Null zone: This zone is a predefined discard zone. Interfaces placed in the null zone drop all traffic. It does not allow policy logging of dropped control plane traffic (Option A is incorrect).

* Management functional zone: This is used to define management interfaces, not the "functional zone" as stated in Option B (incorrect wording).

Correct Statements: C and D

Reference: Juniper Networks - Security Zones and Functional Zones, Junos OS Security Fundamentals.

NEW QUESTION # 59

Which UI enables you to manage, monitor, and maintain multiple firewalls using a single interface?

- A. Juniper Secure Analytics
- B. Juniper Identity Management Service
- C. Secure Connect
- D. Security Director

Answer: D

Explanation:

* Security Director (Option B): A Junos Space application that provides a centralized interface for managing, monitoring, and maintaining multiple SRX firewalls.

* Juniper Secure Analytics (Option A): Focuses on SIEM/log analysis, not centralized firewall management.

* Identity Management Service (Option C): Provides user identity integration for policy enforcement, not a management UI.

* Secure Connect (Option D): A VPN client solution, not a firewall management platform.

Correct UI: Security Director

Reference: Juniper Networks - Junos Space Security Director Overview, Junos OS Security Fundamentals.

NEW QUESTION # 60

Which statement is correct about source NAT?

- A. It performs bidirectional IP address translation.
- B. It performs translation on ingress traffic only.
- C. It translates private IP addresses to public IP addresses.
- D. It translates MAC addresses to private IP addresses.

Answer: C

Explanation:

Source NAT (Network Address Translation) is used on SRX devices to allow hosts with private IP addresses to access external networks, such as the Internet. The SRX translates the private IP address of the source host into a public IP address before forwarding traffic toward the destination.

* It does not translate MAC addresses (Option A).

* NAT is unidirectional in this case: it specifically translates private-to-public in the outbound direction, while the reverse (return traffic) is handled automatically through the session table. It is not a bidirectional translation (Option C).

* NAT processing occurs as part of the flow module, not limited only to ingress traffic (Option D).

Therefore, the correct statement is that source NAT translates private IP addresses to public IP addresses.

Reference: Juniper Networks - Junos OS Security Fundamentals, NAT Concepts and Source NAT Processing

NEW QUESTION # 61

Which two statements are correct about security zones and functional zones? (Choose two.)

- A. Traffic entering transit interfaces can exit an interface in a functional zone.
- **B. Traffic entering transit interfaces cannot exit an interface in a functional zone.**
- C. Traffic entering an interface in a functional zone can exit any other transit interface.
- **D. Traffic entering an interface in a functional zone cannot exit any other transit interface.**

Answer: B,D

Explanation:

* Functional zones (e.g., junos-host, management, null) are not used for forwarding transit traffic. They are used to manage traffic destined to or from the SRX device itself.

* Option A: Correct. If traffic enters through a functional zone interface, it is meant for the SRX, not for transit, so it cannot exit another interface.

* Option D: Correct. Transit interfaces handle forwarding traffic, but they cannot send that traffic out through a functional zone interface.

* Option B and C: Incorrect, because functional zones are strictly control-plane, not transit forwarding zones.

Correct Statements: A and D

Reference: Juniper Networks - Security Zones vs. Functional Zones, Junos OS Security Fundamentals.

NEW QUESTION # 62

Click the Exhibit button.

Which two statements are correct about the content filter shown in the exhibit? (Choose two.)

- A. .exe files will not be allowed to be uploaded over HTTP.
- **B. .exe files will not be allowed to be downloaded over HTTP.**
- C. There will be an e-mail sent to the user about why the SRX is blocking the file.
- **D. There will be a notice added to the SRX log file about the file being blocked.**

Answer: B,D

Explanation:

From the exhibit, the content filter configuration is as follows:

* Match Conditions:

* Application: HTTP

* Direction: download

* File-types: exe

* Action:

* block

* notification log

Analysis of Options:

* Option A: Incorrect. The configuration specifies the download direction, not upload. Uploads of .exe files are unaffected.

* Option B: Correct. Because the rule applies to downloads, .exe files will be blocked when users attempt to download them over HTTP.

* Option C: Correct. The notification { log; } statement ensures that an entry will be added to the SRX device's log when the action is triggered.

* Option D: Incorrect. No configuration for sending e-mail notifications is shown in the rule. Only logging is specified.

Correct Statements: B and C

Reference:Juniper Networks -UTM Content Filtering Configuration and Actions, Junos OS Security Fundamentals, Official Course Guide.

NEW QUESTION # 63

.....

This pdf covers all of the JN0-232 Exam Questions from the previous exams as well as those that will appear in the upcoming Juniper JN0-232 exam. The JN0-232 PDF exam questions are compiled according to the latest exam syllabus to ensure your success. The Juniper JN0-232 PDF exam questions are also printable to make handy notes.
