### **Trustworthy Juniper JN0-460 Source, JN0-460 Exam Introduction**

Our online version of JN0-460 learning guide does not restrict the use of the device. You can use the computer or you can use the mobile phone. You can choose the device you feel convenient at any time. Once you have used our JN0-460 exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use JN0-460 Exam Training at your own right. Our JN0-460 exam training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use JN0-460 test guide, you can enter the learning state.

### **Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q12-Q17):**

#### **NEW QUESTION # 12**

The main advantage of Campus Fabric IP Clos architecture is:

- A. Increased network complexity
- B. Limited data flow control
- C. Enhanced fault tolerance
- D. Decreased scalability

**Answer: C**

**NEW QUESTION # 13**

In the context of wired assurance, what role do templates play?

- A. Encrypting network traffic
- B. Increasing the network's bandwidth
- C. Expanding the wireless coverage
- D. Standardizing device configurations

**Answer: D**

**NEW QUESTION # 14**

Which statement is correct about the VXLAN data plane?

- A. The data plane learns the IP addresses of end-user devices.
- B. The data plane advertises the MAC addresses of end-user devices.
- C. The data plane encapsulates the traffic.
- D. The data plane learns the MAC addresses of end-user devices.

**Answer: C**

Explanation:

VXLAN (Virtual Extensible LAN) uses an overlay encapsulation method to carry Layer-2 frames over an IP underlay. This functionality is part of the data plane, which is responsible for packet forwarding and encapsulation/decapsulation.

"In an EVPN-VXLAN fabric, the control plane (via BGP EVPN) learns and advertises MAC and IP information, while the data plane encapsulates and forwards traffic using VXLAN tunnels between VTEPs." Option A is incorrect: IP learning happens in the control plane, not the data plane.

Option B is incorrect: MAC advertisement is done in the control plane through EVPN route types.

Option D is incorrect: MAC learning is handled by EVPN control plane, not the VXLAN data plane.

Option C is correct: the VXLAN data plane encapsulates the traffic in UDP tunnels between VTEPs.

**NEW QUESTION # 15**

In MistAI wired assurance, what is a key benefit of the AI-driven operations?

- A. Decreased network visibility
- B. Increased network troubleshooting time
- C. Requirement for more specialized networking staff
- D. Proactive identification and resolution of issues

**Answer: D**

**NEW QUESTION # 16**

Referring to the exhibit, what is the purpose of the Save button in the upper-right corner of the Mist dashboard?

□

- A. It applies the port configuration changes to the switch.
- B. It generates a backup of the current port configuration.
- C. It resets the port configuration to its default settings.
- D. It previews the impact of the port configuration changes before applying them

**Answer: A**

Explanation:

In the Juniper Mist AI for Wired dashboard, administrators can select one or more switch ports (as shown in the exhibit, e.g., port ge-0/0/25 on an EX4100-48MP). Once configuration changes are made - such as VLAN assignment, port profiles, PoE settings, or administrative state - the Save button must be clicked to confirm and apply those changes to the device.

"When making configuration changes in the Mist switch interface, the Save button must be used to confirm the modifications.

Clicking Save applies the selected port settings to the switch through Mist Cloud." Option A is incorrect: saving does not create a backup. Backups and snapshots are handled through Mist's configuration archive, not via the Save button.

Option B is incorrect: Save does not reset configuration; instead, it commits changes.

Option C is incorrect: there is no preview function tied to Save.

Option D is correct: the Save button is explicitly for applying configuration changes to the selected switch or port(s).
