Pass Guaranteed High-quality Snowflake - ADA-C02 - Sample SnowPro Advanced Administrator ADA-C02 Questions Answers

Now, the test syllabus of the ADA-C02 exam is changing every year. More and more people choose to prepare the exam to improve their ability. So the ADA-C02 exam becomes more difficult than before. For our experts, they are capable of seizing the tendency of the real exam. The questions and answers of our ADA-C02 Guide materials will change every year according to the examination outlines. And we always keep them to be the latest and accurate.

Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q60-Q65):

NEW QUESTION # 60

What roles or security privileges will allow a consumer account to request and get data from the Data Exchange? (Choose two.)

- **A. IMPORT SHARE and CREATE DATABASE**
- B. SECURITYADMIN
- C. SYSADMIN
- D. IMPORT PRIVILEGES and SHARED DATABASE
- **E. ACCOUNTADMIN**

Answer: A,E

Explanation:

ACCOUNTADMIN role is required to access and manage Data Exchange listings and shares.

The IMPORT SHARE and CREATE DATABASE privileges are required to create databases from shared data.

NEW QUESTION # 61

What is a characteristic of Snowflake's transaction locking and concurrency modeling?

- A. A deadlock cannot occur in Snowflake, since concurrently executed queries and DML statements do not block one another.
- B. Queries executed within a given transaction see that transaction's uncommitted changes.
- C. Transaction locking in Snowflake is enforced exclusively at the row and table levels.
- D. If two queries are concurrently executed against the same table, one of the two queries will be blocked until the other query completes.

Answer: A

Explanation:

Snowflake uses multi-version concurrency control (MVCC), which allows queries and DML statements to operate without blocking each other. This architecture eliminates the possibility of deadlocks because transactions work on snapshots of data rather than locking rows or tables in ways that could cause contention.

NEW QUESTION # 62

The following commands were executed:

Grant usage on database PROD to role PROD_ANALYST;

Grant usage on database PROD to role PROD_SUPERVISOR;

Grant ALL PRIVILEGES on schema PROD.WORKING to role PROD_ANALYST;

Grant ALL PRIVILEGES on schema PROD.WORKING to role PROD_SUPERVISOR;

Grant role PROD_ANALYST to user A;

Grant role PROD_SUPERVISOR to user B;

What authority does each user have on the WORKING schema?

- A. Both user A and user B can create tables in the PROD.WORKING schema.
- B. Tables created by either user A or user B will be visible to both users.
- C. All existing tables in schema PROD.WORKING will be visible to both users.
- D. Only user B can create tables, because all privileges were transferred to PROD_SUPERVISOR.

Answer: A

Explanation:

Granting ALL PRIVILEGES on the schema PROD.WORKING to both roles (PROD_ANALYST and PROD_SUPERVISOR) gives each user (A and B) full schema-level rights, including the ability to create tables. Since both roles received these grants independently, both users can create tables in the schema.

NEW QUESTION # 63

Which tasks can be performed by the ORGADMIN role? (Choose three.)

- A. View a list of all regions enabled for the organization.
- B. Create secure views on application tables within the organization.
- C. Create a reader account to share data with another organization.
- D. Perform zero-copy cloning on account data.
- E. Create one or more accounts in the organization.
- F. View usage information for all accounts in the organization.

Answer: A,E,F

Explanation:

The ORGADMIN role can create accounts in the organization, view all enabled regions, and access usage information across all organization accounts. Creating secure views and zero-copy cloning are not ORGADMIN tasks. Reader accounts can be created, but only for sharing within the same organization, not with another organization.

NEW QUESTION # 64

What are benefits of creating and maintaining resource monitors in Snowflake? (Choose three.)

- A. The cost of running a resource monitor is only 10% of a credit, per day of operation.
- **B. Multiple triggers can be configured across various virtual warehouse thresholds.**
- **C. Multiple resource monitors can be applied to a single virtual warehouse.**
- D. Resource monitors add no additional load to virtual warehouse compute.
- **E. Resource monitors can be applied to more than one virtual warehouse.**
- F. Resource monitor governance is tightly controlled and monitors can only be created by the ACCOUNTADMIN role or users with the CREATE MONITOR privilege.

Answer: B,C,E

Explanation:

Multiple resource monitors can be assigned to a single virtual warehouse for granular credit control.

Resource monitors support multiple triggers at different usage thresholds.

A single resource monitor can govern multiple virtual warehouses.

NEW QUESTION # 65

.....

These ADA-C02 mock tests are made for customers to note their mistakes and avoid them in the next try to pass ADA-C02 exam in a single try. These Snowflake ADA-C02 mock tests will give you real ADA-C02 exam experience. This feature will boost your confidence when taking the Snowflake ADA-C02 Certification Exam.
