## Data-Driven-Decision-Making Test Registration | Data-Driven-Decision-Making Free Practice

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the Data-Driven-Decision-Making certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the Data-Driven-Decision-Making exam, you need more external assistance to help yourself. We have engaged in this career for more than ten years and with our Data-Driven-Decision-Making Exam Questions, you will not only get aid to gain your dreaming Data-Driven-Decision-Making certification, but also you can enjoy the first-class service online.

### WGU VPC2Data-Driven Decision MakingC207 Sample Questions (Q76-Q81):

#### NEW QUESTION # 76

What is the purpose of linking strategy to performance assessment in an organization?

- A. To decrease the organization's action plans
- **B. To provide a target of where an organization needs or desires to be**
- C. To increase the organization's data collection
- D. To translate the organization's mission for only team players

**Answer: B**

Explanation:

Linking strategy to performance assessment helps an organization define where it needs or desires to be and measure progress toward that target. This connection is essential because it ensures that performance metrics are not selected in isolation, but instead support the mission, goals, and priorities of the organization. When strategy and assessment are aligned, managers can evaluate whether operational efforts are contributing to desired outcomes, identify gaps between current and expected performance, and make better-informed decisions about improvement. The other options do not reflect the main purpose. Increasing data collection may occur, but it is not the central reason for linking strategy to assessment. Reducing action plans is not a valid objective, and translating the mission only for team players is too narrow and inaccurate. Strategic performance assessment creates direction, accountability, and clarity across the organization. Therefore, the correct answer is that it provides a target of where an organization needs or desires to be.

#### **NEW QUESTION # 77**

Which performance metric simultaneously accounts for financial, customer, internal process, and learning metrics?

- A. Balance sheet
- B. Income statement
- C. Customer complaint report
- **D. Balanced scorecard**

**Answer: D**

Explanation:

The balanced scorecard is the performance framework that simultaneously accounts for financial, customer, internal process, and learning and growth metrics. It was developed to provide a more complete view of organizational performance than financial measures alone. By incorporating these four perspectives, organizations can connect day-to-day activities with long-term strategy and ensure that performance is evaluated in a balanced way. Financial measures show economic results, customer measures reflect market and service outcomes, internal process measures track operational efficiency and quality, and learning metrics focus on improvement, capability development, and organizational growth. A customer complaint report addresses only one narrow area. A balance sheet and an income statement are financial documents and do not capture the full multidimensional view described in the question. Because the question asks for the metric that integrates all four of these important performance areas, the correct answer is balanced scorecard.

#### **NEW QUESTION # 78**

A student is surveying chief executive officers to understand their levels of satisfaction with work-life balance over a period of three years. The student receives responses to a survey with a question regarding how many hours a week each CEO works. Which statistical approach should be used to summarize the data for analysis?

- **A. Mean**
- B. Median
- C. Bell curve
- D. Scatterplot

**Answer: A**

Explanation:

The question asks how to summarize responses about how many hours each CEO works per week. Since hours worked is a numerical variable, a measure of central tendency is appropriate for summarizing the data.

The mean is the standard choice for describing the average number of hours worked across respondents. It provides a single representative value that can be used to understand the general workload pattern in the group. A bell curve is a distribution shape rather than a summary statistic. A scatterplot is a graphical tool used to display relationships between two quantitative variables, not to summarize one variable's central value. The median can also summarize numerical data, especially if there are strong outliers, but the most direct and standard summary for average hours worked is the mean unless the question specifically emphasizes skewness or resistance to outliers. Since the prompt asks for a statistical approach to summarize the data for analysis, the best answer is mean.

#### **NEW QUESTION # 79**

What is an omission error?

- A. When data contains outliers
- **B. When crucial data is missing**
- C. When data is inaccurate
- D. When not all the data has been reviewed

**Answer: B**

Explanation:

An omission error occurs when crucial data is missing from a dataset, which can significantly compromise the quality of analysis and decision-making. In data-driven decision making, omission errors are a serious concern because missing information can lead to biased results, incorrect interpretations, and flawed conclusions.

Omission errors may arise during data collection, data entry, or data integration processes. For example, failing to record customer demographics, transaction values, or time periods can distort descriptive statistics and weaken predictive models. Unlike inaccuracies, which involve incorrect values, omission errors involve the absence of necessary data altogether.

Outliers represent extreme values and are not omission errors. Similarly, failing to review all data is a process issue rather than a data-quality error definition. Inaccurate data refers to incorrect or erroneous values, not missing ones.

Effective data quality management emphasizes identifying and correcting omission errors through validation rules, completeness checks, and data audits. In data-driven decision making, ensuring that all relevant data is captured is essential for producing reliable insights and supporting sound business decisions. Therefore, the correct answer is D, as an omission error occurs when crucial data is missing.

#### NEW QUESTION # 80

An analyst used multiple linear regression to show how a big box store's sales ( $y$ ) are predicted by the big box store's advertising expenditure in dollars (variable  $x_1$ ) and the advertising expenditure in dollars of a specialty store (variable  $x_2$ ) in the same market. The estimated regression is  $y = 651.57 + 92.30x_1 + 26.89x_2$ . How are advertising expenditures and sales related in this scenario?

- **A. If the specialty store increases its advertising expenditures, it will decrease the big box store's sales.**
- B. If the big box store decreases its advertising expenditures, it will decrease the big box store's sales.
- C. If the big box store decreases its advertising expenditures, its sales will increase.
- D. If the big box store increases its advertising expenditures, its sales will decrease.

**Answer: A**

#### NEW QUESTION # 81

.....

With the advent of knowledge times, we all need some professional certificates such as WGU Data-Driven-Decision-Making to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our WGU Data-Driven-Decision-Making practice materials for you with our heartfelt sincerity.

**Data-Driven-Decision-Making Test Registration:** <https://www.actual4labs.com/WGU/Data-Driven-Decision-Making-actual-exam-dumps.html>

WGU Latest Data-Driven-Decision-Making Test Online Besides, you can consolidate important knowledge for you personally and design customized study schedule or to-do list on a daily basis, If you have prepared well, tried all the Data-Driven-Decision-Making Test Registration - VPC2Data-Driven Decision Making C207 Exams, and understood each concept clearly, there is minimal or no chance of failure, Then you can click on the links and log in and you will use our software to learn our Data-Driven-Decision-Making prep torrent immediately.

Consider systems administration as a grueling military Data-Driven-Decision-Making Exam collection campaign, and management as the generals and strategists planning the war: As important as soldiers may be, every general knows that **Latest Data-Driven-Decision-Making Test Online** maintaining supply lines and managing inventory are even more crucial for winning battles.
