CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q489-Q494):

NEW QUESTION # 489

A company is planning to integrate the processes of several applications and assign a manager to oversee the technical coordination to improve efficiency. Which of the following would be BEST for coordinating the processes?

- A. Scripting
- B. Continuous delivery
- **C. Orchestration**
- D. Continuous integration

Answer: C

NEW QUESTION # 490

A large enterprise has the following invoicing breakdown of current cloud consumption spend:

The level of resources consumed by each department is relatively similar. Which of the following is MOST likely affecting monthly costs?

- A. The servers in use by the marketing department are in an availability zone that is generally expensive.
- **B. The marketing department likely stores large media files on its servers, leading to increased storage costs.**
- C. The servers in use by the accounting and IT operations departments are in different geographic zones with lower pricing.
- D. The accounting and IT operations departments are choosing to bid on non-committed resources.

Answer: B

Explanation:

The marketing department likely stores large media files on its servers, leading to increased storage costs. This is because the marketing department is responsible for creating and distributing various types of digital content, such as videos, images, podcasts, and webinars, to promote the products and services of the enterprise. These media files tend to be large in size and require more storage space than other types of data, such as text documents or spreadsheets. Therefore, the marketing department consumes more storage resources than the other departments, which increases the monthly cloud costs for the enterprise. NEW QUESTION # 491

A cloud usage metering scheme allows for which of the following customer chargeback alternatives?

- A. Cost amortization
- **B. Cost allocation**
- C. Direct cost
- D. Shared cost

Answer: B

NEW QUESTION # 492

A company is planning to use cloud computing to extend the compute resources that will run a new resource-intensive application.

A direct deployment to the cloud would cause unexpected billing. Which of the following must be generated while the application is running on-premises to predict the cloud budget for this project better?

- A. Benchmark
- B. Proof of concept
- **C. Baseline**
- D. Feasibility study

Answer: C

Explanation:

A baseline is a snapshot of the current state of a system or an environment that serves as a reference point for future comparisons. A baseline can capture various aspects of a system, such as performance, cost, configuration, and resource utilization. By generating a baseline while the application is running on-premises, the company can better predict the cloud budget for the project by estimating
